Actuarial Committee

Meeting Agenda

Date	Time	Location	Staff Contact
August 6, 2015	9:30 AM	WCIRB California	David M. Bellusci
		1221 Broadway, Suite 900	
		Oakland, CA	

1221 Broadway, Suite 900 • Oakland, CA 94612 • 415.777.0777 • Fax 415.778.7007 • www.wcirb.com • wcirb@wcirb.com

Released: July 30, 2015

To Members of the Actuarial Committee, WCIRB Members and All Interested Parties:

I. Approval of Minutes

Meeting held on June 12, 2015

II. Working Group Meeting Summaries

None

III. Unfinished Business

- A. AC99-05-02: Annual Report on Paid Costs
- B. AC12-12-02: Review of WCIRB Trending Methodology
- C. AC14-08-06: Reform Adjustments to Loss Development
- D. AC14-08-07: SB 863 Cost Monitoring Adjustments to Pure Premium Ratemaking
- E. AC15-03-07: Study of ULAE Reported to California
- F. AC15-06-01: 3/31/2015 Experience Review of Methodologies
- G. AC15-06-02: 2015 Update to Medical Transaction Data Analysis

IV. New Business

- A. AC15-08-01: Third Quarter 2015 Review of Diagnostics
- B. AC15-08-02: 1/1/2016 Filing Loss Adjustment Expense Review
- C. AC15-08-03: 1/1/2016 Filing Review of Alternative Loss Projection Methodologies
- D. AC15-08-04: Computation of Industry Average Filed Rates as of 7/1/2015

V. Matters Arising at Time of Meeting

VI. Next Meeting Date: September 2, 2015

VII. Adjournment

Antitrust Notice

As members of the Workers' Compensation Insurance Rating Bureau of California, you are bound, when involved in meetings or other activities of the WCIRB California, to limit your actions (and discussions other than social ones) to matters relating to the business of the WCIRB California. Matters that do not relate directly to WCIRB California business should be avoided. Members should particularly avoid discussions or conduct that could be construed as intended to affect competition (or access to markets). Thus, as members, you should not discuss or pursue the business interests of individual insurers or others, including, in particular, the plans of individual members involving, or the possibility or desirability of (a) raising, lowering, or stabilizing prices (premiums or commissions); (b) doing business or refusing to do business with particular, or classes of, insurers, reinsurers, agents, brokers, or insureds, or in particular locales; or (c) potential actions that would affect the availability of products or service either generally or in specific markets or locales.

Item AC99-05-02 Annual Report on Paid Costs

At the June 12, 2015 meeting, the Committee reviewed a draft summary of California workers' compensation losses and expenses pursuant to Section 11759.1 of the California Insurance Code. At the meeting, staff recommended enhancing the paid medical loss distributions included in the report with data derived from individual payment transactions reported in accordance with the WCIRB's Medical Data Call (MDC). (The final report including these enhancements was released on June 30, 2015 and can be accessed on the WCIRB's website.) In addition, staff advised the Committee that, once the enhancements had been implemented, certain elements currently being reported by insurers on the WCIRB's Aggregate Indemnity and Medical Costs Call (AIM Call) that can be more accurately derived from MDC data may no longer need to be reported on the AIM Call.

Exhibit 1 shows a mock-up of staff's proposed changes to the AIM Call that eliminate the requirement for the reporting of detailed payments by physician specialty for calendar year 2015 to be issued in early 2016.

Annual Call for Direct California Workers' Compensation Aggregate Indemnity and Medical Costs

Calendar Year 2015 (CA-IM-2015)

Due Date: April xx, 2016

Annual Call for Direct California Workers' Compensation Aggregate Indemnity and Medical Costs

Calendar Year 2015 (CA-IM-2015)

Due Date: April xx, 2016

Payments Made to Physicians

I. Physicians NOT Holding an M.D. Degree

- a. Acupuncturists
- b. Chiropractors
- c. Clinical Social Workers
- d. Clinics (1)
- e. Dentists
- f. Marriage, Family and Child Counselors
- g. Optometrists
- h. Osteopaths
- i. Physical Therapists
- j. Podiatrists
- k. Psychologists
- I. Unknown or Not Otherwise Classified

Subtotal (I)

II. Physicians Holding an M.D. Degree

- a. Anesthesiology
- b. Chest Diseases
- c. Clinics (1)
- d. Dermatology
- e. Emergency
- f. General Surgery
- g. General & Family Practice
- h. Hand Surgery
- i. Infectious Diseases
- j. Internal Medicine (2)
- k. Neurology
- I. Neurosurgery
- m. Occupational Medicine
- n. Ophthalmology
- o. Orthopedics (3)
- p. Pathology
- q. Physical Medicine MDs
- r. Plastic Surgery
- s. Psychiatry (4)
- t. Pulmonary Diseases
- u. Radiology
- v. Unknown or Not Otherwise Classified

Subtotal (II)

Total Payments Made to Physicians [Subtotal (I) + Subtotal (II)]

(This should equal line (1a), Part C of Page 1 of this report)

- (1) Payments made to clinics shall be classified according to the most appropriate specialty if possible.
- (2) Pulmonary Disease and Infectious Disease sub-specialties are separately classified.
- (3) The Hand Surgery sub-specialty is separately classified.
- (4) Neurology is separately classified.

Instructions Call for Direct California Workers' Compensation

Annual Call For Direct California Workers' Compensation Aggregate Indemnity and Medical Costs (CA-IM-20xx)

- •
- •
- •

For PART C (Paid Medical), information reported must be in accordance with the following:

a) "Physicians" means physicians as defined in Section 3209.3(a) of the California Labor Code. Payments to physicians must include all clinic and office visits, diagnostic testing and physical therapy. Industrial medicine must be included in the Occupational Medicine category, and thoracic medicine must be included in the Chest Diseases category. The following specialties must be included in the "Unknown or Not Otherwise Classified" category:

> allergy and immunology aviation medicine cardiology digestive endocrinology gastroenterology immunology infectious diseases neuromuscular medicine nuclear medicine obstetrics and gynecology oncology otolaryngology - head and neck surgery otorhinolaryngology (ear, nose and throat) pediatrics preventative medicine and public health proctology rheumatology urology

The "Total Payments Made to Physicians" from page 2 of this call must equal the "Payments Made to Physicians on page 1 of this call.

- b) "Payments Made to Hospitals" must be reported payments made to hospitals, <u>including</u> payments for medications used in hospitals.
- c) "Payments for Drugs" must be reported payments for medications, <u>excluding</u> those made to hospitals.

Item AC12-02-02 Review of WCIRB Trending Methodology

In 2012, the Committee reviewed a comprehensive retrospective analysis of trending methodologies, with an emphasis on the appropriateness of trending frequency and severity separately relative to applying a combined loss ratio trend during varying claims environments. Inasmuch as the workers' compensation system has undergone significant transition in the last several years under Senate Bill No. 863 (SB 863), staff has updated the analysis to review the retrospective performance of trending methodologies in the SB 863 transition environment (accident years 2012 through 2014).

Methods Reviewed

The trending methodologies reviewed in this analysis are generally consistent with those reviewed in the 2012 study. These methodologies fit into three broad categories: separate frequency and severity trends methods, combined loss ratio trend methods, and other trending methods. As with the 2012 study, to approximate the trending period for WCIRB pure premium rate filings, the indemnity or medical loss ratio for each accident year was projected from two years prior (e.g., accident year 2014 loss ratios were projected using data from accident years 2012 and prior).

Separate Frequency and Severity Trends Methods

Claim frequency and severity are affected by differing underlying forces. Separately trending for frequency and severity allows for separate assumptions for each component to be made. These methods may be appropriate in environments where historical loss ratios have been volatile or during periods of transition where some judgment about future trends may be appropriate. These methods rely on accurate projections of frequency and severity and assume that frequency and severity changes are not highly correlated. While projections of ultimate claim severities rely on projections of loss development to some degree, these projections are not as affected by loss development as are loss ratio trend methods since some judgment is involved in selecting a severity trend projection.

- A. Frequency and Severity Trends Applied to the Latest Two Years and Then Averaged. Frequency projections were based on a) the actual 12-month frequency change for the accident year where available² and b) the WCIRB's most recent econometric indemnity claim frequency model.³ Severity projections were based on average ultimate indemnity and medical claim severities based on March 31, 2015 experience.⁴ The selected annual severity trend was based on the average of the longer-term (post-2005) and shorter-term (five-year) rates of growth. These separate frequency and severity trends were applied to each of the latest two accident years, with the stated projection equal to the average of the projections of the two years.
- B. <u>Frequency and Severity Trends Applied to the Latest Year</u>. This method applies the selected frequency and severity trend projections, as described in method A above, to the latest accident year only.

¹ See Item AC12-12-02 of the December 5, 2012 meeting.

² For example, to project accident year 2014 from 2011 and 2012 would use the actual 12-month frequency change for 2012, and the frequency model projections for 2013 and 2014.

³ Consistent with the 2012 study, in order to avoid conclusions driven by changes to the frequency model and its inputs over time, the most recent model was used for all projections.

⁴ All projections were based on the data reviewed at the June 12, 2015 meeting and may not be comparable to the data reflected in Item AC15-06-01 of this Agenda, which includes additional insurer data submissions and updates to several factors. However, the updated information since it reflects minor changes should not significantly impact the results of this study.

Loss Ratio Trend Methods

Loss ratio trend methods typically fit a function to the historical on-level loss ratios. These methods may be appropriate when there is a stable trend in the historical loss ratios. They do not require knowledge or projection of separate frequency and severity components, but rely more heavily on the accuracy of loss development and on-leveling adjustments. For example, if loss development projections are understated, a trend based on the developed loss ratios is more likely to be understated inasmuch as the more recent year loss ratios will typically be more understated than those for earlier years. If on-level adjustments are not properly applied, one-time changes in cost levels may be projected as a future trend.

- C. Longer-Term (Post-2005) Average Annual Loss Ratio Trend Applied to the Latest Two Years and Then Averaged. An average annual exponential trend was selected based on the longer-term (post-2005) rate of growth in historical on-level loss ratios. This trend was applied to each of the latest two accident years, with the stated projection equal to the average of the projections of the two years.
- D. Five-Year Average Annual Loss Ratio Trend Applied to the Latest Two Years and Then Averaged. An average annual exponential trend was selected based on the rate of growth in historical on-level loss ratios for the latest five years. This trend was applied to each of the latest two accident years, with the stated projection equal to the average of the projections of the two years.
- E. <u>Five-Year Average Annual Loss Ratio Trend Applied to the Latest Year</u>. This method applies the selected loss ratio trend based on the latest five years to the latest accident year only.

Other Trending Methods

In some instances, such as periods of transition, a trend based solely on separate frequency and severity components or on the historical on-level loss ratios may not be the most appropriate. Selection of these methods, like all methods, requires judgment and knowledge of the current claims environment.

- F. Average of Frequency and Severity Trends Applied to the Latest Two Years and Five-Year Loss Ratio Trend Applied to the Latest Two Years. Although separately projecting frequency and severity components allows for greater use of information and judgment about the current claims environment, oftentimes changes in frequency and severity are related. This method gives weight to both categories of methods by taking the average of the projections based on applying separate frequency and severity trends to the latest two years (as described in method A above) and applying the five-year loss ratio trend to the latest two years (as described in method D above).
- G. <u>Average of Latest Two Years (Flat Trend)</u>. During periods of uncertainty where trends may be changing direction, a flat trend selection may be appropriate. This method bases a projection on the average of the two most recent on-level loss ratios, with no additional trend applied.
- H. <u>Use of Latest Year (Flat Trend)</u>. This method bases a projection on the most recent on-level loss ratio, with no additional trend applied.

Results for the SB 863 Transition Environment

Exhibits 1.1 through 1.3 show the results of each of the above trending methods to project accident year 2012 through 2014 loss ratios. For consistency of comparison across years, the cost of medical cost containment programs was included in all medical loss ratios and projections. Exhibits 2.1 through 2.8 show, graphically, the percentage differences from the actual loss ratios by method. For informational purposes, comparisons to accident years reviewed during the 2012 study for the comparable method are shown. Exhibit 3 summarizes the percentage differences and shows the ranks of the absolute percentage differences for indemnity and medical for each accident year. Exhibit 4 shows the average absolute difference and rank by claims environment, including the claims environments reviewed during the 2012 study.

During this period of transition, the steady overall cost level increases observed over the prior several years began to moderate and, in some cases, change direction. As a result, methods based on changes in on-level loss ratios, which projected the prior increases to continue, significantly overstated the projections for these years. Methods based on separate frequency and severity projections also overstated the projected loss ratios for these years but to a significantly less degree, as the separate selections of the components allowed for a quicker responsiveness to the changing environment. The flat tend methods generally performed the best during this period of transition as they do not project forward the pre-transition trends. The results of the methods tested during the SB 863 transition period are consistent with those for the transition period during the prior (2002 through 2004) reforms.

Relationship between Frequency and Severity

Although frequency and severity are affected by differing underlying forces, changes in these components are oftentimes related. If changes in frequency and severity were perfectly correlated, projecting them separately would not improve the accuracy of the projection. Exhibit 5 shows a history of correlations between changes in frequency and severity. Although there was significant negative correlation between changes in frequency and severity in the period following the 2002 through 2004 reforms, the relationships were positive or not significant in other claims environments. This underlines the notion that selection of an appropriate trending method is very dependent on the current and future expected claims environment.

Item AC14-08-06 Reform Adjustments to Loss Development

For many years, the WCIRB has based its loss development projection on a methodology that adjusts for the estimated impact of various workers' compensation reforms on paid loss development patterns. At the August 5, 2014 meeting, the Committee reviewed the continued appropriateness of these adjustments related to the 2002 through 2004 reforms and those related to Senate Bill No. 863 (SB 863). At that meeting, the Committee determined that eliminating the loss development adjustments for the 2002 through 2004 reforms was appropriate, inasmuch as it had been a number of years since those reforms had been implemented and the adjustments were no longer significantly enhancing the accuracy of the projection. The Committee also determined that the adjustments for SB 863 are enhancing the accuracy of the projection and should continue to be applied, but recommended that these adjustments continue to be reviewed regularly. Staff's most recent analysis of these adjustments to paid loss development is detailed below.

Indemnity Adjustments

The adjustment to indemnity losses for the impact of SB 863 is based on a 2013 WCIRB report on loss development and the WCIRB's standard approach to adjust for the impact of reforms on indemnity loss development. Table 1 shows the estimated impact of SB 863 on indemnity development after 24 months for accident years 2012 through 2014 based on the findings of the report.

	B 863 Impact on oss Development
Accident Year	Impact on 24-to-Ult. Development Factor
2012	-0.5%
2013	+1.6%
2014	+7.5%

Several quarters of post-SB 863 loss development are now available. Exhibit 1 compares quarterly age-to-age development from accident years 2012 through 2014 with that projected by the WCIRB's post-SB 863 imputed payment patterns or the alternative "latest year unadjusted" factor. Thus far, the development factors implied by the imputed payment patterns are generally consistent with actual emergence, though not significantly more accurate than the "latest year unadjusted" factor. However, inasmuch as many of the SB 863 provisions effecting permanent disability benefits will be paid out over many years and that accident year 2014—for which the greatest SB 863 impact is expected—is at the early stages of development, staff recommends continuing the adjustments to indemnity.

Medical Adjustments

The WCIRB's 2013 report on loss development also discussed the potential impact of the various SB 863 reforms on historical medical payment patterns. Based on the findings of the report, the WCIRB's current development methodology adjusts pre-2013 medical payments by -4.9% for the estimated impact of SB 863 provisions related to liens, independent medical review (IMR), and medical provider network (MPN) strengthening.² The impact of this adjustment on paid medical loss development factors and projected ultimate medical loss ratios is shown on Column B of Exhibits 2 and 3, respectively.

¹ Impact of Senate Bill No. 863 on Loss Development Patterns, WCIRB, August 13, 2013.

² The estimated impact was updated from that cited in the 2013 report based on updated information on emerging post-SB 863 costs, and will continue to be updated based on post-SB 863 cost information reviewed by the Committee (see Item AC14-08-07 of this Agenda).

The underlying assumption of this adjustment is that medical payments made after January 1, 2013 on all accident years are approximately 4.9% lower than would have been the case if SB 863 had not been enacted. Exhibit 4.1 shows the quarterly paid medical loss development factors as of March 31, 2015. Exhibit 4.2 shows these factors cumulated and indexed by calendar quarter. Changes in the 12-to-96 factor for a quarter represent the cumulative effect of paid medical loss development in that calendar quarter. Although medical development did not decline in 2013 and was in fact markedly higher, it is not possible to know the extent to which paid medical development would have been different in 2013 had SB 863 not been enacted. Paid medical development did significantly decline in the second half of 2014 and continues to emerge at a lower level.

The WCIRB also adjusts paid medical loss development for the impact of the new physician fee schedule based on a resource-based relative value scale (RBRVS) that became effective January 1, 2014 and will be phased-in over a four year period. Specifically, pre-2014 medical payments are adjusted by +0.9% for the estimated impact of RBRVS on the 2014 service year and pre-2015 medical payments are adjusted by +0.6% for the estimated impact of RBRVS on the 2015 service year.³ The total impact of these adjustments on paid medical loss development factors and projected ultimate medical loss ratios is shown on Columns C and D of Exhibits 2 and 3, respectively.

As with other SB 863 provisions, the adjustment for RBRVS assumes that medical payments made in 2014 are 0.9% higher and medical payments made in 2015 are an additional 0.6% higher than they would have been had the new fee schedule not been adopted. Although it is too early to assess the 2015 service year, detailed information on physician payments made in 2014 are available based on the WCIRB's Medical Data Call (MDC). As shown on Exhibit 5 and discussed in Item AC14-08-07 of this Agenda, total physician payments per fee schedule claim in 2014 declined rather than increased as initially projected, primarily attributable to greater-than-anticipated savings in the special services and reports (SS&R) category. However, payments made in 2014 for the other physician categories are emerging consistent with initial projections. In addition, unlike the other physician categories, the SS&R category did not receive incremental annual changes in fees under the four-year phase-in of RBRVS. As a result, staff believes the savings in the SS&R category are one-time in nature.

These service-year adjustments to medical loss development also assume a relatively consistent mix of services performed on each accident year during that calendar year. Exhibit 6 shows the distribution of physician payments made in 2013 and 2014 by category for each accident year/development period. Evaluation and management (E&M) services—which received a significant fee increase under RBRVS—are disproportionately more likely to be performed during the first year than other types of physician services. As a result, using the same adjustment factor for the earlier and later periods for the impact of RBRVS may not be appropriate. Demonstratively, the 12-to-15 month paid medical age-to-age factor for accident year 2014 shown on Exhibit 4.1 increased from that of the prior year, while the most recent quarterly age-to-age factors for more mature periods generally showed declines.

To address this issue, a different adjustment factor for each development period (or groups of development periods) based on the estimated mix of physician services for that development period could be applied. For example, rather than adjusting all medical payments made prior to January 1, 2014 by +0.9% for the impact of RBRVS, which represents a weighted average of types of physician services across all development periods, a factor that weights E&M services more heavily can be applied to development in the first year. Additional information on this type of adjustment will be discussed at the meeting.

III-C-2
WCIRB California®

³ These adjustments were discussed by the Committee at the August 5, 2014 meeting and were updated from those originally cited based on updated information on the estimated percentage of total medical benefits for physician services, and will be updated based on SB 863 cost monitoring results reviewed by the Committee (see Item AC14-08-07 of this Agenda). The estimated impact of RBRVS on the 2016 and 2017 service years would be adjusted in a similar fashion once post-2016 and post-2017 data emerges.

Item AC14-08-07 SB 863 Cost Monitoring - Adjustments to Pure Premium Ratemaking

In the last several pure premium rate filings, the WCIRB reflected the estimated cost impact of Senate Bill No. 863 (SB 863) on pure premium rates. These estimates were based on the WCIRB's prospective cost evaluation of SB 863 and initial retrospective evaluations. The WCIRB's most recent retrospective evaluation of the cost impact of SB 863 was reviewed by the Committee at the November 4, 2014 meeting and released on November 14, 2014.

At the meeting, staff will review the SB 863 on-level adjustments currently reflected in the pure premium rate projection with the Committee to determine what recommended adjustments, if any, should be made to the on-level factors to be reflected in the January 1, 2016 Pure Premium Rate Filing based on current SB 863 cost monitoring results.

Some of the key SB 863 cost components along with the current on-level adjustments and cost monitoring results are summarized below.

Indemnity Cost Components Related to Permanent Disability

The WCIRB's prospective evaluation of SB 863 of the various changes to permanent disability (PD) benefits included an estimation of the cost impact of a) the accident year 2013 and 2014 increases in minimum and maximum weekly PD benefits, b) changes to supplemental job displacement benefits, c) changes to PD ratings related to future earning capacity (FEC),² d) elimination of PD add-ons, and e) elimination of the three-tiered system of weekly PD benefits. In total, the WCIRB's prospective evaluation estimated that these changes (including the impact on claim frequency) would increase costs by 3.7%.

In the WCIRB's 2014 SB 863 cost monitoring report, it was noted that PD benefits are paid well into the life of a claim and determination of final PD ratings often do not occur for many years. As a result, the WCIRB noted that the cost impact of many of the SB 863 provisions related to PD benefits will not be known for a number of years. However, the WCIRB noted that early estimates of PD benefits from unit statistical data as well as early information on average final PD ratings from the Disability Evaluation Unit for post-SB 863 claims show that the cost impact of SB 863 provisions related to PD benefits are emerging generally consistent with the WCIRB's prospective estimates. In total, estimated ultimate indemnity claim severities for accident years 2013 and 2014 are emerging somewhat lower than initial projections (see Table 7).

Indemnity Claim Frequency

The WCIRB's prospective evaluation of SB 863 included provisions for changes in indemnity claim frequency as a result of the SB 863 increases to PD and other changes impacting indemnity benefits. These provisions were based on the WCIRB's standard econometric claim frequency model. In total, the WCIRB's prospective evaluation estimated that the claim frequency changes resulting from SB 863 provisions would increase costs by 1.1%.

Table 1 shows the WCIRB's latest estimates of accident year indemnity claim frequency changes through March 31, 2015 compared to the frequency model projections made including the projected impact of SB 863. While the current estimate for accident year 2012 indicates an increase in indemnity claim frequency much greater than the changes projected based on the WCIRB's econometric claim frequency

¹ Senate Bill No. 863 WCIRB Cost Monitoring Report – 2014 Retrospective Evaluation, WCIRB, November 14, 2014.

² Includes eliminating the impact of the <u>Ogilvie</u> decision which dealt specifically with the FEC adjustment to PD.

model, estimates for more recent years are emerging at levels fairly consistent with projections.³ At this time, the extent to which the higher-than-projected indemnity claim frequency change for 2012 is due to anticipation of increased SB 863 benefits as compared to regional differences, economic factors, other components of SB 863, or other claims-related factors is not clear.⁴

Table 1: I	ndemnity Claim Frequency	uency Changes
	WCIRB Model	Estimated Actual
Accident	Projected Indemnity	Indemnity Claim
Year	Claim Frequency	Frequency
	Change ⁵	Change ⁶
2012	-1.9%	+3.3%
2013	+0.3%	+0.5%
2014	+1.1%	-0.2%

Liens

The WCIRB's prospective evaluation of the impact of SB 863 on lien-related costs estimated a 1.8% reduction in medical costs and a 7.8% reduction in loss adjustment expenses (LAE), resulting in a 2.5% reduction in total costs. This estimate was based on an assumption that approximately 40% of liens would be eliminated by the SB 863 lien filing fee and statute of limitations. Last year, based on post-SB 863 counts of lien filings from the Division of Workers' Compensation (DWC), the WCIRB updated its estimate of the number of liens reduced by SB 863 provisions to 60% from 40%, resulting in an updated 3.6% reduction in total costs.

Table 2 shows the total number of liens filed through the first quarter of 2015 based on DWC EAMS data. Following the passage of SB 863 in the third quarter of 2012, lien filings in the remainder of 2012 increased dramatically. In 2013 and 2014, the number of liens filed decreased significantly and were approximately 60% less than the number of liens filed in 2011. However, the number of liens filed in the first quarter of 2015 is significantly higher than that for the first quarter of 2014. Some of this increase may be attributable to liens filed on services provided on or after July 1, 2013, for which the SB 863 18-month statute of limitations to file a lien begins to apply in the first quarter of 2015. At this time it is uncertain as to what extent these increased lien filings are a one-time anomaly or to what extent it may be a partial reversal of the lien savings experienced in 2013 and 2014.

³ The indemnity benefit level in the WCIRB's econometric frequency model is a leading variable. That is, a change in indemnity benefit levels for a year is assumed to also impact indemnity claim frequency for the prior year. In addition to changes in indemnity benefit levels, the WCIRB's frequency model also projects frequency changes based on a number of economic and other claims-related factors. In addition, the WCIRB's frequency model typically does not project the impact of shifts in classification mix.

⁴ See *Analysis of Changes in Indemnity Claim Frequency – January 2015 Update Report* for the WCIRB's latest analysis of recent changes in indemnity claim frequency.

⁵ Based on Exhibit C7.1 of Item AC15-08-01. Frequency changes include the projected impact of shifts in classification mix. The estimated impacts of class mix shifts on indemnity claim frequency are -1.1% for 2012, -0.5% for 2013, and +1.5% for 2014.
⁶ See Exhibit 12 of Item AC15-06-01.

Tab	le 2: Numbe	er of Liens Filed	7
		Rolling	Four Quarter
Year & Quarter	Quarterly	Four Quarter	Change from

2012 2Q	187,957		
2012 3Q	323,230		
2012 4Q	513,004	1,179,284	+154%
2013 1Q	69,097	1,093,288	+136%
2013 2Q	30,110	935,441	+102%
2013 3Q	40,904	653,115	+41%
2013 4Q	46,153	186,264	-60%
2014 1Q	41,443	158,610	-66%
2014 2Q	47,244	175,744	-62%
2014 3Q	47,841	182,681	-61%
2014 4Q	53,423	189,951	-59%
2015 1Q	71,863	220,371	-52%

The WCIRB's prospective estimate of lien demand, settlement, and administrative costs was based on its 2012 Lien Survey. In 2013 and 2014, the WCIRB issued a subsequent Lien Surveys on liens active in the post-SB 863 environment. The results of these surveys were generally consistent with initial projections of average lien costs.

Surgical Implant Hardware

The WCIRB's prospective evaluation estimated that SB 863's elimination of the separate reimbursement for implantable medical devices, hardware, and instrumentation for spinal surgeries would reduce total medical costs by 1%. This estimate was, in part, based on a California Workers' Compensation Institute (CWCI) study of the multiple reimbursements on claims with spinal surgeries, which found that the duplicate payment added an estimated \$20,000 to each procedure. As noted in the WCIRB's 2014 SB 863 cost monitoring report, results from post-SB 863 surgical implant services performed through the first half of 2014 based on WCIRB Medical Data Call (MDC) data were generally consistent with these prospective estimates.

Ambulatory Surgical Center (ASC) Fees

The WCIRB's prospective evaluation estimated that SB 863's reduction in ASC facility fees would reduce total medical costs by 0.8%. This estimate was based on a judgmental reduction of 25% in ASC facility fees based on the new fee cap partially offset for the impact of contract discounts already in place. As noted in the WCIRB's 2014 SB 863 cost monitoring report, results on ASC facility fees paid on post-SB 863 services provided through the first half of 2014 based on WCIRB MDC data were consistent with these prospective estimates. In March of 2015, the WCIRB updated its joint study of ASC fees with the CWCI with results that were also consistent with prospective estimates.

⁷ See Exhibit M9.2 of Item AC15-08-01 for more detail.

⁸ Preliminary Estimate of California Workers' Compensation System-Wide Costs for Surgical Instrumentation Pass-Through Payments for Back Surgeries, CWCI, June 2012.

⁹ Ambulatory Surgical Center Cost Outcomes: Follow Up Study on the Impact of California SB 863 Workers' Compensation Reforms, WCIRB and CWCI, March 11, 2015.

In its 2014 SB 863 cost monitoring report, the WCIRB also evaluated changes in outpatient hospital services compared to changes in ASC costs to determine if any shift in the distribution of these services is occurring. Results based on WCIRB MDC data through the first half of 2014 showed that the proportion of total episodes utilized by outpatient hospitals has remained generally consistent after the implementation of SB 863, suggesting that no significant shift from ASCs to outpatient hospital facilities has yet occurred.

Independent Medical Review (IMR)

The new IMR process for handling medical treatment disputes was one of the cornerstone reforms of SB 863. The WCIRB's evaluation of the cost impact of IMR is segregated into several components, which are detailed below.

1. <u>Impact on frictional and litigation costs</u>. The WCIRB's prospective estimate assumed a proportion of liens, medical-legal reports, and expedited hearings would be replaced by IMR reports. In addition, the WCIRB assumed additional reductions in LAE from reduced litigation related to medical treatment as a result of IMR. In total, the WCIRB's prospective evaluation estimated that IMR savings to frictional and litigation costs would reduce total costs by -0.9%. Last year, based on a) continued utilization of expedited hearings for medical treatment disputes, b) significantly higher volumes of IMR requests than projected, and c) observed significant increases in loss adjustment expenses, the WCIRB eliminated any savings related to these costs from its SB 863 cost estimates.

While detailed information on the number of liens related to utilization review disputes is not available, DWC data on lien filed counts (see Table 2) show a sharp decrease in the number of liens filed following SB 863, particularly those related to medical treatment. However, it is unclear to what extent the lower volume of post-SB 863 liens is attributable to the IMR process and to what extent it is attributable to other SB 863 provisions impacting liens. In addition, as noted in the WCIRB's 2014 SB 863 cost monitoring report, the number and cost of medical-legal reports based on WCIRB MDC data through the first half of 2014 does not show a significant decline. Finally, Table 3 shows that the number of expedited hearings did not decline following the implementation of SB 863 and in fact increased significantly.

Table 3: Number of Expedited Hearings ¹⁰						
Year & Quarter	Quarterly	Annual	Annual Change			
2011 (Full Year)		9,502				
2012 (Full Year)		11,464	+21%			
2013 1Q	3,480					
2013 2Q	3,615					
2013 3Q	4,109					
2013 4Q	4,013	15,217	+33%			
2014 1Q	3,813					
2014 2Q	4,463					
2014 3Q	4,404					
2014 4Q	3,926	16,606	+9%			
2015 1Q	4,062					

In total, the WCIRB assumed approximately 51,000 IMRs would be filed annually. Table 4 shows the number of IMR requests filed through the first quarter of 2015 based on information available from the DWC through the IMR vendor. Once IMR became effective for all injuries regardless of

¹⁰ See Exhibit M8.2 of Item AC15-08-01 for more detail.

the accident date starting on July 1, 2013, the number of IMR requests increased significantly and has continued at a high level through the first quarter of 2015. Table 4 also shows the annual number of eligible IMRs after eliminating invalid and duplicate requests. Although eliminating up to 40% of IMRs due to duplicate or ineligible requests significantly reduces the estimated number of IMRs performed per year, it still remains almost three times greater than that projected by the WCIRB in its initial assessment of SB 863 cost impacts.

Table 4: IMR Filings ¹¹						
Quarterly Annual Ann						
Year & Quarter	(All IMRs)	(All IMRs)	(Eligible IMRs)			
2013 1Q & 2Q	878					
2013 3Q	31,950					
2013 4Q	51,092	83,920	52,844			
2014 1Q	49,928					
2014 2Q	59,983					
2014 3Q	61,793					
2014 4Q	47,199	218,903	134,637			
2015 1Q	61,142					

The WCIRB assumed an additional reduction of 1.6% in LAE from reduced litigation related to medical treatment as a result of IMR. While it is not possible to isolate the impact of litigation issues related to medical treatment from other components of allocated loss adjustment expenses (ALAE), projected ALAE for 2013 and 2014 shows significant increases rather than the expected declines (see Table 7).

- 2. Temporary disability (TD) duration. The WCIRB's prospective cost evaluation assumed a 5% reduction in TD duration as a result of the IMR process reducing delays related to medical treatment. Preliminary post-SB 863 estimates based on CWCI data shows that the average number of paid TD days for accident year 2013 at 12 months and accident year 2012 at 24 months continues to increase generally consistent with the pre-SB 863 rate. 12 However, WCIRB PD survey data shows small declines in TD duration for accident year 2012 at first survey level. 13 Inasmuch as the issuance of IMR decisions has experienced significant delays during the initial transition period due to far greater-than-anticipated volume of requests, the extent to which IMR may ultimately impact TD duration remains uncertain.
- 3. Medical treatment costs. Given the uncertainty as to how IMR will impact medical treatment, the WCIRB did not prospectively estimate the impact of IMR on medical treatment costs,¹⁴ but agreed to monitor changes in overall medical cost levels as post-SB 863 data emerges. Estimated medical severities for 2013 and 2014 are significantly lower than pre-SB 863 levels and initial projections for those years (see Table 7). Staff is currently analyzing the overall impact of SB 863 on medical treatment levels and will present its findings later this year.

Medical Provider Networks (MPNs)

The WCIRB's prospective evaluation estimated the SB 863 changes intended to strengthen MPNs would reduce total costs by 1%, which included savings to PD costs, TD costs, and medical costs. The most recent data from the CWCI shows MPN penetration rates to follow a fairly consistent pattern with that of

¹¹ See Exhibit M14 of Item AC15-08-01 for more detail.

¹² See Exhibit S10.1 of Item AC15-08-01.

¹³ See Exhibit S10.2 of Item AC15-08-01.

¹⁴ CDI decisions on pure premium rate filings after the enactment of SB 863 have reflected a 2.5% reduction in medical costs coming from the impact of IMR on medical treatment.

prior years,¹⁵ and CWCI estimates of the post-SB 863 cost differentials related to MPN managed claims compared to non-network claims is generally consistent with estimates from prior years.

Independent Bill Review (IBR)

The WCIRB did not include a prospective cost estimate for the new IBR process to handle bill payment disputes in its SB 863 evaluation inasmuch as, at the time, there were a number of outstanding issues related to the IBR process that needed to be resolved through regulation. Since implementation, IBR has been much less utilized than IMR, with less than 200 requests being filed each month according to the DWC. Early IBR results have shown that the majority of decisions favor the provider, but the award amounts have typically been small. While the direct cost impact of the IBR system appears to be small, some of the reduction in the number of liens filed may be a result of providers filing an IBR rather than pursuing a potentially more costly lien dispute.

Conversion of the Physician Fee Schedule to a Resource-Based Relative Value Scale (RBRVS) Basis

The new physician fee schedule incorporating RBRVS became effective on January 1, 2014 with a four year phase-in. The WCIRB's prospective cost evaluation of the new physician fee schedule was included in its amended January 1, 2014 Pure Premium Rate Filing and estimated the total impact would increase medical costs by 3.6%.

The WCIRB's prospective evaluation of RBRVS estimated that the new fee schedule would increase the cost of physician services occurring in 2014 (the first year of the four-year phase-in) by 2.4%. Table 5 shows changes in total physician fees for services that occurred in 2014 by type of service based on WCIRB MDC data. For most types of services, costs are emerging at levels generally consistent with prospective estimates. However, total fees paid for special services and reports, which the WCIRB assumed would not significantly change under the new fee schedule, decreased by 37% in 2014. As a result, the total physician cost per fee schedule claim declined by 4.1% in 2014 rather than increase by 2.4% as initially projected.

Table 5: Impact of RBRVS on Physician Fees					
	Initial	Actual			
	Projected	Change As of			
Category	Change ¹⁶	4Q 2014			
Anesthesia	-4.7%	-5.0%			
Evaluation & Management	+15.8%	+14.4%			
Medicine	-1.3%	-3.3%			
Pathology & Laboratory	-41.0%	-17.2%			
Radiology	-3.4%	-9.1%			
Surgery	-4.8%	-3.9%			
Special Services & Reports	0.0%	-36.9%			
Total Physician Cost per Fee Schedule Claim	+2.4%	-4.1%			

Table 6 shows the WCIRB's prospectively estimated change in total physician costs over the remaining years of the phase-in to RBRVS. Inasmuch as the 2014 decreases in special services and reports are assumed to be one-time in nature due to the initial transition to RBRVS in 2014 and fees for those services did not receive fee schedule adjustments as part of the remaining years of the phase-in, and initial costs for other physician categories are emerging generally consistent with prospective estimates, adjustments to the WCIRB's prospective estimates for the remaining years of the phase-in to RBRVS

-

¹⁵ See Exhibit 5A of Item AC15-06-02.

¹⁶ See the WCIRB's amended January 1, 2014 Pure Premium Rate Filing.

may not be warranted at this time. Staff plans to present its second comprehensive analysis of the RBRVS change—which will include data from early 2015 services—later this year.

Table 6: Prospective Estimates of RBRVS by Service Year ¹⁷				
Initial Projected				
Change on				
Service Year	Physician Costs			
2015	+1.6%			
2016	+2.2%			
2017	+2.3%			

Other System Components

There are a number of other system components likely impacted by SB 863 for which data was not yet available at the time of the WCIRB's 2014 retrospective evaluation, including new fee schedules for copy services, interpreters, and home health services. In its SB 863 cost monitoring plan, the WCIRB noted that the potential cost impact of these new fee schedules will be evaluated at the time of their adoption.

The new copy service fee schedule adopted by the DWC became effective July 1, 2015. As discussed at the June 12, 2015 meeting, current copy services costs based on staff surveys of insurer calendar medical payments are estimated to be less than 1% of total paid medical losses. In addition, the flat fee reimbursement of \$180 for up to 500 pages adopted by the DWC represents the approximate midpoint between current average reimbursement fees for applicant and defense services as reported by the Berkeley Research Group. As a result, at the June 12, 2015 meeting, the Committee agreed that no adjustment to pure premium rates for the impact of the new fee schedule is appropriate at this time. Although no changes in the utilization of copy services have been projected at this time, staff will monitor copy service costs through its MDC data to assess the impact of the new fee schedule.

Overall Impact on Claim Severities

The WCIRB's overall prospective estimate of the impacts of the SB 863 provisions described above on 2013 and 2014 indemnity, medical, ALAE, and unallocated loss adjustment expense (ULAE) severities is shown in Table 7. Table 7 also compares the estimated impact of SB 863 on 2013 and 2014 severities combined with the pre-SB 863 changes in average costs projected in the January 1, 2013 Pure Premium Rate Filing with the estimated ultimate severity change from 2012 to 2014 as of March 31, 2015. Indemnity severities are emerging somewhat lower than projected, while medical severities are emerging significantly lower than projected. However, post-SB 863 ALAE and ULAE severities are emerging at significantly higher-than-projected levels.

Table 7: Projected Post-SB 863 Severity Changes from 2012 to 2014							
		1/1/13 and					
Loss or LAE	SB 863	1/1/14 Filing	Combined	Actual			
Component	Projected	Projected	Projected	Change as			
Component	Change	Growth	Change	of 3/31/15 ¹⁸			
Indemnity	+5.5%	+9.7%	+15.7%	+9.3%			
Medical	-1.6%	+15.2%	+13.3%	-6.2%			
ALAE	-13.5%	+14.5%	-1.0%	+16.5%			
ULAE	-13.5%	+3.4%	-10.5%	+1.2%			

¹⁷ See the WCIRB's amended January 1, 2014 Pure Premium Rate Filing.

¹⁸ Figures shown for ALAE and ULAE are for private insurers only. The ULAE changes are based on calendar year ULAE paid per open indemnity claim.

Item AC15-03-07 Study of ULAE Reported to California

At the June 12, 2015 meeting, the Committee reviewed an approach intended to "gross-up" California unallocated loss adjustment expense (ULAE) data for deductible and third party administrator (TPA) costs that were not included in some insurers' reported ULAE to address the potential under-reporting of gross ULAE costs for California. This approach was noted as the first step toward addressing the long-standing large differential between ULAE ratios reported by insurers writing business primarily in California ("California private insurers") and those reported by insurers writing business in other states in addition to California ("national insurers").

The approach discussed at the June 12, 2015 meeting involved expanding the WCIRB Expense Call to collect additional information to address ULAE costs related to deductible policies and TPAs which may not be fully reflected in ULAE amounts reported in the Insurance Expense Exhibit (IEE) on a countrywide basis. Specifically, the WCIRB Expense Call will request a) the amount of negative adjustments in reported IEE ULAE related to handling claims below a deductible amount or other service fees, b) information on how TPA costs are handled in reported IEE ULAE and the associated loss amounts corresponding to the portions of the business that are handled by TPAs where the TPA costs are not included in the IEE ULAE, and c) countrywide ULAE and loss information reported on the IEE or determined on a basis consistent with the IEE. WCIRB will adjust the IEE ULAE based on this information and apportion it to California.

Staff provided draft questions requesting the items discussed above to a number of insurer representatives for feedback. Based on the feedback received, the insurer representatives contacted did not have significant concerns with the questions and indicated that they should be able to provide the additional information beginning with the 2015 call. Exhibit 1 shows the Expense Call form and instructions proposed by staff for calendar year 2015 after incorporating the feedback received from the insurer representatives.

To summarize how the additional information requested on Exhibit 1 will be used by WCIRB staff to estimate an insurers' California gross ULAE on a "pure premium ratemaking" basis, the numerator and/or the denominator of the countrywide ULAE to loss ratio ("ULAE ratio") based on IEE information will be adjusted as necessary to produce a ratio in which the ULAE and losses are on a comparable basis. The resulting countrywide adjusted ULAE ratio will be applied to the countrywide gross-of-deductible losses to determine the countrywide "grossed up" ULAE amount. The countrywide "grossed up" ULAE amount will then be apportioned to California using California's share of countrywide gross-of-deductible paid losses. The calculations to derive the California gross paid ULAE are shown below. (California gross incurred ULAE would be derived in a similar fashion.)

III-E-1
WCIRB California®

¹ As a convention, the value from Question x is denoted as Qx. Also, Q19b\$ denotes the loss amount from Question 19b or the loss amount that can be derived from the reported percentage in Question 19b. Q20\$ is similarly denoted.

14. Does your company write workers' compensation large deductible policies in any state?

If yes, please explain how the premium and losses for these policies were adjusted to a full coverage basis in making apportionments of national workers' compensation expense data to California. Show reconciliation, if appropriate. If this cannot be done using the explanation field below, after submitting this Expense Call please email an attachment with the full reconciliation details and include your reporting group name and code, data call code, and version / revision # to: eSCAD@wcirb.com.

15. Does your company act as an assigned risk servicing carrier for workers' compensation in other states?

If yes, please explain how reimbursements for assigned risk servicing carrier expenses are accounted for; and if the expense reimbursements are netted against actual expense incurred, explain how national workers' compensation expenses were adjusted to a basis gross of reimbursements. Show reconciliation, if appropriate. If this cannot be done using the explanation field below, after submitting this Expense Call please email an attachment with the full reconciliation details and include your reporting group name and code, data call code, and version / revision # to: eSCAD@wcirb.com.

16. Please provide explanations for any negative amounts reported on this call for 2015 expenses.

Annual Call for Direct California Workers' Compensation Expense Information for Calendar Year 20xx (CA-EX-20xx)

The information reported must be in accordance with the following:

Section I: Expense Exhibit (Pages 1 - 3 4):

- (a) Include experience (premium, losses and expenses) from:
 - Deductible policies on a gross (first dollar) basis, except for figures in Questions 17a to 17f which are on a net-of-deductible basis
 - Standard workers' compensation policies
 - Employers liability increased limits
 - Minimum premiums
 - Salvage and subrogation
- (b) Exclude experience (premium, losses and expenses) from:
 - Ceded reinsurance
 - Reinsurance assumed
 - Excess insurance
 - USL&H insurance
 - Private residence employee insurance
 - National Defense Project insurance
- (c) Exclude the impact of the following items from all reported premiums:
 - Application of any deductible credits
 - Application of any retrospective rating plan adjustments
 - California Insurance Guarantee Association (CIGA) assessments
 - California Workers' Compensation Revolving Fund assessments
 - California Workers' Compensation fraud surcharges
 - Uninsured Employers Trust Fund Assessment
 - Subsequent Injuries Benefits Trust Fund Assessment
 - Occupational Safety & Health Fund assessments
 - Labor Enforcement & Compliance Fund assessments
 - Any charge for terrorism coverage pursuant to the Terrorism Risk Insurance Act of 2002 as amended by the Terrorism Risk Insurance Extension Act of 2005, or the Terrorism Risk Insurance Program Reauthorization Act of 2007.
- (d) Earned Premium (line 1 on Page 1, Section I "Expense Exhibit" of this Call) must be identical to the earned premium reported on Part b, Column (1) Total of Section III, Calendar Year Exhibit of the Call for Direct California Workers' Compensation Experience, Fourth Quarter of Calendar Year 20xx (CA-QT-4Qxx). (Please refer to the definition of "Final Premium" in Part 4, Section II of the California Workers' Compensation Uniform Statistical Reporting Plan – 1995 (USRP), available on the WCIRB website at http://www.wcirb.com/document/123, for a more detailed definition of premium to be reported to the WCIRB.)
- (e) Earned but not billed or booked (EBUB) premium must be included in Earned Premium.
- (f) Incurred Losses (line 2 on Page 1, Section I "Expense Exhibit" of this Call) must be identical to the incurred losses reported on Column (6), Line (e), "YTD Change," in Section II, Accident Year Exhibit of CA-QT-4Qxx. The costs of medical cost containment programs (MCCP)

Annual Call for Direct California Workers' Compensation Expense Information for Calendar Year 20xx (CA-EX-20xx)

incurred during calendar year xx on claims covered by policies incepting **prior to** July 1, 2010 only is to be included, except for those related to independent bill review (IBR) and independent medical review (IMR). i.e., IBR and IMR costs are **not** to be included on this line.

- (g) Premium and losses from large deductible rating programs should first be adjusted to a full coverage basis prior to making premium or loss apportionments of national workers' compensation expense data to California.
- (h) In making apportionments of various countrywide workers' compensation expenses to California, countrywide expense amounts should be gross of any reimbursements of assigned risk servicing insurer fees.
- (i) Allocated loss adjustment expenses incurred must be reported in accordance with the definition of "Allocated Loss Adjustment Expenses" in Part 4, Section II of the USRP, available on the WCIRB website at http://www.wcirb.com/document/123. For claims arising from policies incepting on or after July 1, 2010, the costs of all MCCP (including IBR and IMR) paid is included in incurred allocated loss adjustment expenses. For claims arising from policies incepting prior to July 1, 2010, only IBR and IMR (and no other MCCP) paid is included in incurred allocated loss adjustment expenses.
- (j) For companies writing workers' compensation only in California, unallocated loss adjustment expense incurred or paid reported in Questions 4a and 4b must be reported in accordance with the definition of "Unallocated Loss Adjustment Expenses" in Part 4, Section II of the USRP, available on the WCIRB website at http://www.wcirb.com/document/123.
 - For companies writing workers' compensation in other states as well as in California, the countrywide workers' compensation unallocated loss adjustment expense incurred determined as specified in the above paragraph may be apportioned to California based upon the ratio of the sum of California workers' compensation Incurred Paid Losses (line 2 on page 1 of this Call) and Incurred Allocated Loss Adjustment Expense (line 3 on page 1 of this Call) to the sum of countrywide workers' compensation Paid Losses and allocated loss adjustment expense determined in a manner consistent with those reported for California in lines 2 and 3 on page 1 of this Call.
- (k) Commission and brokerage expenses must be reported on a basis consistent with line 16, column 11, of the 20xx Annual Statement California Exhibit of Premiums and Losses (Statutory Page 14 Data), subject to the exceptions outlined in paragraphs (a) and (b) above.
- (I) Taxes, licenses and fee expenses must be reported on a basis consistent with line 16, column 12, of the 20xx Annual Statement California Exhibit of Premiums and Losses (Statutory Page 14 Data), subject to the exceptions outlined in paragraphs (a) and (b) above.
- (m) The individual expense components of other acquisition expenses and general expenses (operating expense classifications 3 to 18 and 24 in Part I of the 20xx Insurance Expense Exhibit, or IEE) must be reported on a basis consistent with the amounts reported in the IEE, subject to the exceptions outlined in paragraphs (a) and (b) above.

Annual Call for Direct California Workers' Compensation Expense Information for Calendar Year 20xx (CA-EX-20xx)

If an individual expense component of other acquisition expense or general expense is directly available for California workers' compensation, it must be reported. Otherwise, the following procedure to apportion countrywide expenses to California workers' compensation must be followed:

- i. The countrywide workers' compensation other acquisition expenses incurred and general expenses incurred shown in line 16, column 27, and line 16, column 29, of Part III of the 20xx IEE, subject to the exceptions outlined in paragraphs (a) and (b) above, may be apportioned to California workers' compensation based on the ratio of California workers' compensation Earned Premium (line 1 on page 1 of this Call) to countrywide earned workers' compensation premium computed on the same basis (i.e., subject to the exceptions outlined in paragraphs (a) and (b) above).
- ii. The amount to be reported for a particular other acquisition expense component may be determined as the product of the total other acquisition expenses apportioned to California in the paragraph above and the ratio of the amount reported for the particular expense component in column 2 of Part I of the 20xx IEE to the sum of line 19, column 2, and line 24, column 2, of Part I of the 20xx IEE.
 - [For example, if \$1 million of countrywide workers' compensation other acquisition expenses were apportioned to California in accordance with the instruction in (i) above and the amount of countrywide advertising expenses assigned to other acquisition expenses (IEE Part I, line 4, column 2) was 10% of the total of all other acquisition expense components (sum of IEE, Part I, column 2, lines 19 and 24), \$100,000 would be reported in the Call for the advertising component of other acquisition expenses in this Call (line 7b on page 1 of this Call).]
- iii. The amount to be reported for a particular expense component of general expense may be determined as the product of the total general expenses apportioned to California as specified above and the ratio of the particular expense item in column 3 of Part I of the 20xx IEE to the sum of line 19, column 3, and line 24, column 3, of Part I of the 20xx IEE.

For each expense component, indicate whether the amount is an actual California expense or derived based on the apportionment method described above by marking the appropriate letter in the column labeled "Actual California (C) or Apportionment (A)".

- (n) Civil or criminal fines, penalties or punitive damages incurred must include all penalties, fines or punitive damages imposed by any court of law in civil or criminal actions pertaining to or arising from California workers' compensation business. (These amounts are also to be included in other Call items as appropriate.)
- (o) Additional penalties or fines incurred (other than civil or criminal fines, penalties or punitive damages) must include those imposed by the WCIRB, the Department of Insurance, the Department of Industrial Relations, or any state agency pertaining to or arising from California workers' compensation business. (These amounts are also to be included in other Call items as appropriate.) Automatic increases to late indemnity payments made pursuant to Labor Code Section 4650 must be included in this category.

Annual Call for Direct California Workers' Compensation Expense Information for Calendar Year 20xx (CA-EX-20xx)

- (p) Attorney expenses:
 - Applicant attorney expenses includes all amounts for applicant attorney and other legal fees specified in an award, including any applicant attorney fees resulting from vocational rehabilitation maintenance allowance or penalty awards and fees for depositions on behalf of the claimant.
 - ii. Defense attorney expenses amounts paid in connection with the defense of a controverted claim, including:
 - 1. Amounts paid for legal representation, whether in-house or outside counsel.
 - 2. Amounts paid for in-house or outside non-attorney hearing representatives.
 - The cost of in-house legal department support staff and other legal department expenses related to the defense of controverted claims. (These expenses contemplate in-house legal department salary-related and overhead expenses that are similar to those contemplated in legal fees paid to outside defense attorneys and applicant attorneys.)

Expenses associated with claims which are later determined to be non-compensable must be <u>included</u> with the expenses of other compensable claims. The cost of outside copying services, investigation, special insurance units and normal claims department functions must be <u>excluded</u>. The expense associated with employers' liability claims must also be <u>excluded</u>.

- (q) For countrywide amounts in Question 17a, 17b and 17c, IEE Incurred ULAE must be reported on a basis consistent with line 16, column 11, of Part III of the 20xx IEE. IEE ULAE Reserves must be reported on a basis consistent with line 16, column 17, of Part III the 20xx IEE. The amount for Paid ULAE may be determined as the 20xx IEE Incurred ULAE amount minus the change in IEE ULAE Reserves from the prior year; column 11 of Part III of the 20xx IEE minus (column 17 of Part III of the 20xx IEE minus column 17 of Part III of the 20xx-1 IEE).
- (r) For countrywide amounts in Question 17d, 17e and 17f, IEE Incurred Losses must be reported on a basis consistent with line 16, column 7, of Part III of the 20xx IEE. IEE Loss Reserves must be reported on a basis consistent with line 16, column 13, of Part III the 20xx IEE. The amount for Paid Losses may be determined as the 20xx IEE Incurred Loss amount minus the change in IEE Loss Reserves from the prior year; column 7 of Part III of the 20xx IEE minus (column 13 of Part III of the 20xx IEE minus column 13 of Part III of the 20xx-1 IEE).
- (s) For countrywide paid loss below deductibles in Question 17g, it is the difference between the countrywide first-dollar (gross-of-deductible) paid loss amount and the countrywide net-of-deductible paid loss amount that is reported on the 20xx IEE.
- (t) For the countrywide amount of total calendar year paid losses in Questions 19b and 20b, the percentage of business may be determined based on countrywide direct paid losses on a first-dollar (gross-of-deductible) basis.

Item AC15-06-01 3/31/2015 Experience - Review of Methodologies

At the June 12, 2015 meeting, the Committee reviewed a preliminary analysis of statewide experience through March 31, 2015. The attached Exhibits 1 through 8 contain an updated analysis of March 31, 2015 experience. In total, almost 100% of the market is included. Wage and loss levels are projected to January 1, 2017—the approximate midpoint of experience on policies incepting in 2016, and premiums were adjusted to the industry average filed pure premium rate level as of January 1, 2015.

The updated information differs from that presented at the June 12, 2015 meeting in that this analysis reflects: a) the inclusion of additional insurer data submissions and insurer data call corrections, b) updates to the wage level and indemnity claim frequency projections based on UCLA's June 2015 forecasts, and c) updates to several other on-level adjustments.

As shown on Exhibit 8, the projected policy year 2016 loss to the industry average filed pure premium ratio based on March 31, 2015 experience is 0.692. (The projected loss ratio reflected in the analysis presented at the June 12, 2015 meeting was 0.695.)

Additional supplemental information is included in Exhibits 9 through 12.

California Workers' Compensation Accident Year Experience as of March 31, 2015

To adjust for non-repeating asbestosis claim patterns in older accident years, these factors are reflected at 20% of the reported ULT/363Inc factors. The original factors were 1.011, 1.006, 1.006, 1.007, 1.007, and 1.003, respectively.

A six-year average of the ULT/363Inc and a three-year average of the 363Inc/363Pd factors are selected. <u>(၁</u>

(d) Six-year averages of the ULT/363Inc and 363Inc/363Pd factors are selected.(e) ULT/363Inc factors have been adjusted for the effects of medical inflation.

Selected Indemnity Development Factors - Paid to Age 207, Incurred from Age 207 to Ultimate

(a) Selections are latest year for the 15-to-27 month through 99-to-111 month factors and three-year average for the subsequent age-to-age factors. Paid development factors are selected to age 207, where an incurred-to-paid ratio is chosen, and subsequently, incurred loss development factors are selected until ultimate.

⁽b) The 15-to-ultimate factor for accident year 2014, the 27-to-ultimate factor for accident year 2013, the 39-to-ultimate factor for accident year 2012, and the 51-to-ultimate factor for accident year 2011 have been adjusted by 8.4%, 1.6%, -0.5%, and -0.5% respectively, for the impacts of SB 863 on indemnity loss development. (See Impact of Senate Bill No. 863 on Loss Development Patterns, WCIRB, August 13, 2013.)

⁽c) A three-year average of the 207Inc/207Pd factor is selected.

Selected Indemnity Development Factors - Paid to Age 207, Incurred from Age 207 to Ultimate (Continued)

- (a) Based on WCIRB evaluations of the average impact of legislative changes on the cost of indemnity benefits, including the impact of AB 338. These annual changes in benefits reflect the WCIRB's retrospective estimates of the cost impact of recent legislation, including AB 749, AB 227, SB 228, SB 899, and SB 863 as reflected in emerging post-reform costs. The annual cost impacts have been segregated between claim severity and claim frequency impacts. The negative frequency adjustments for accident years 2004 through 2006 reflect the estimated impact of the reforms of 2002 through 2004 on claim frequency. (See 2008 Legislative Cost Monitoring Report, WCIRB, October 9, 2008.)
- (b) These impacts are based on the weekly wages of injured workers and the legislatively scheduled benefits for that year.
- (c) { [Column (1) /100 + 1.0] x [Column (2) /100 + 1.0] x [Column (3) /100 + 1.0] 1.0 } x 100.
- (d) These factors represent the combined impact of the annual benefit changes on claim severity shown in Column (1), claim frequencies shown in Column (2) and wage inflation impact on benefits shown in Column (3), adjusted to the 1/1/2017 level.
- (e) On-level factors for accident years 2002, 2003 and 2004 adjust the portion of permanent disability claims that are estimated to not be subject to the January 1, 2005 PDRS (95% for accident year 2002, 75% for accident year 2003 and 40% for accident year 2004) to the January 1, 2005 PDRS level, and adjust for the corresponding utilization impacts on all 2002, 2003 and 2004 indemnity claims.
- (f) On-level factors for accident years 2011 and 2012 adjust the portion of indemnity losses not impacted by the adjustments to outstanding indemnity claims for the impact of SB 863 (see Exhibit 2.5).

⁽a) From a Special Carrier Study through 1990. Based on WCIRB's Aggregate Indemnity and Medical Costs Calls for years subsequent to 1990. Accident years 2011 and subsequent do not include MCCP costs.

⁽b) Based on the WCIRB's evaluation of the cost impact of changes in the medical fee schedules. Includes the 1/1/2014 changes to the physician fee schedule to a resource-based relative value scale (RBRVS) except for the proportion reflected in loss development (See Exhibit 2.4).

⁽c) Based on a component of the Consumer Price Index. Projections furnished by the California Department of Finance.

⁽d) Adjusted CPI on workers' compensation medical costs that are not subject to fee schedules. The current year impact is the weighted average of 0% and Column (4), with Columns (1) and (2) from prior years as weights. (i) 1993's non-fee proportion is reduced by 13.8% due to the new medical-legal fee schedule enacted in 1994. (ii) 1998's non-fee proportion is reduced by 7.7% due to the Inpatient Hospital Fee Schedule (IHFS) effective 4/1/1999. (iii) 2002's non-fee proportion is reduced by 7.6% due to the new pharmaceutical fee schedule effective 1/1/2003. (iv) 2003's non-fee proportion is reduced by 17.2% due to the outpatient fee schedule effective 1/1/2004. (v) Given the anticipated impact of legislative reform, a 0% inflation rate has been assumed for 2004 and 2005.

⁽e) Column (6) = Column (3) + Column (5).

- (a) These annual cost impacts reflect the WCIRB's retrospective estimates of the cost impact of recent legislation that includes AB 749, AB 227, SB 228, and SB 899 as reflected in emerging post-reform costs. (See 2008 Legislative Cost Monitoring Report, WCIRB, October 9, 2008.) These factors do not include the estimated -4.9% impact of 1/1/2013 medical provisions in SB 863, which was reflected in loss development projections.
- (b) This reflects the annual percentage impact on medical costs due to changes in the frequency of indemnity claims as a result of benefit changes. The negative frequency adjustments for accident years 2004 through 2006 reflect the estimated impact of the reforms of 2002 through 2004 on claim frequency. (See 2008 Legislative Cost Monitoring Report, WCIRB, October 9, 2008.)
- (c) [Column (1) + 1.0] x [Column (2) + 1.0] 1.0

⁽a) See Exhibit 5.1.

⁽b) Based on WCIRB calendar year experience calls. The industry average charged rates reflect most rating plan adjustments but do not reflect the application of deductible credits or retrospective rating plan adjustments.

⁽c) Reflects (1) advisory pure premium rate level changes to bring premium to the advisory January 1, 2015 pure premium rate level and (2) an additional adjustment factor, which is the ratio of the average advisory January 1, 2015 pure premium rate (\$2.74) to the industry average filed pure premium rate as of January 1, 2015 (\$2.59).

⁽d) (2b) ÷ (2a). This column adjusts premiums at the industry average charged rate level to the industry average filed pure premium rate level as of January 1, 2015.

⁽e) Based on unit statistical data.

⁽f) Based on average promulgated experience modifications. Calendar years 1996 through 2000 include adjustments for the impacts of AB 1913 and SB 1217 (1998).

⁽g) Based on a comparison of premium reported on a calendar year basis to premium reported on an estimated ultimate policy year basis over the course of two accident years. The factor is applied only for calendar years 2007 to 2010, during which reported premiums were impacted by recessionary economic forces.

⁽h) $(1)x(2c)x(3)x(6) \div [(4)x(5)]$ for calendar years 2007 to 2010. $(1)x(2c)x(3) \div [(4)x(5)]$ for all other calendar years.

Indemnity Benefit Level variable is leading. The benefit level change for AY 2004 is related to the AY 2003 change in non-cumulative frequency.

The Indemnity Benefit Level change for Ogilvie & Almaraz / Guzman in 2009-2010 is not leading.

The Indemnity Benefit Level variable excludes indemnity benefit utilization, and changes in the death and permanent total benefits.

The Indemnity Benefit Level variable has been revised due to on-leveling reassessments. See Actuarial Committee item AC09-03-03.

For 1993 on, cumulative claims include both cumulative trauma and occupational disease claims. See March 19, 2014 Actuarial Committee Agenda Item III. Economic variables are historical through 2014; June 2015 UCLA Anderson Forecasts for 2015 on.

Regression is over AY 1979 through AY 2013. AY 2014 through AY 2017 are projections.

The constant term, -0.020, consists of measured offsets that recognize annual changes in real benefit levels relative to nominal

benefit levels and long-term economic growth. Without these offsets, the indemnity benefit level and economic variables would project frequency to increase without bound.

^{*}AY 2013 change is based on a comparison of 2013 accidents on 2012 policies to 2012 accidents on 2011 policies.

2.5%

⁽a) Estimated ultimate severities for all accident years are derived by dividing ultimate medical losses on indemnity claims by ultimate indemnity claim counts. The estimated ultimate medical severities were derived from the projected ultimate loss ratios shown in Exhibit 3.2, column (6).

⁽b) These adjustment factors are based on Exhibit 4.4, excluding the impact of frequency, and including the impact of SB 863 provisions applicable to outstanding medical losses.

⁽c) Severities for accident years 2011 and subsequent do not reflect the cost of medical cost containment programs (MCCP). Severities for accident years 2010 and prior do reflect MCCP costs.

Notes

All figures in each accident year contain information from the same combination of insurers, all of whom submitted complete data for all evaluations for that accident year. Therefore, each accident year may contain a different mix of insurers (ranging from 76% to 99% of the total California workers' compensation insured market measured using 2014 earned premium levels).

California Workers' Compensation Estimated Indemnity Claim Frequency by Accident Year

^[1] The 2012-2013 estimate is based on partial year unit statistical data. The 2013-2014 and 2014-2015 estimates are based on comparison of claim counts based on WCIRB accident year experience as of March 31, 2015 relative to the estimated change in statewide employment.

Item AC15-06-02 2015 Update to Medical Transaction Data Analysis

At the June 12, 2015 meeting, the Committee reviewed a draft California Workers' Compensation Institute (CWCI) report summarizing medical cost trends based on medical transaction data through December 31, 2014. Attached is the final CWCI report.

California Workers' Compensation Institute 1111 Broadway Suite 2350, Oakland, California 94607, (510) 251-9470 June 2015

Analysis of Medical and Indemnity Benefit Payments, Medical Treatment and Pharmaceutical Cost Trends in the California Workers' Compensation System

> Alex Swedlow, MHSA John Ireland, MHSA

Over the past two reform cycles, California workers' compensation medical benefit reforms have been linked to immediate reductions in medical costs. Workers' compensation medical reforms signed into law between 2002 and 2004 were associated with an instant reduction in medical costs in the California workers' compensation system. However, following this reduction there was a significant reversal of the trend in medical benefit costs with medical cost inflation increasing at an annual rate of close to 10% from accident year 2006 to 2010. These increases were noted for most medical cost components (treatment, pharmacy and DME, medical/legal costs and medical cost containment), for all claims and indemnity claims and for medical services within all fee schedule sections.

New data presented in this report confirms that the 2012 California workers' compensation reform, SB 863, is associated with a new reduction in medical cost inflation. For the most recent accident year of this report (AY2014), the medical inflation rate (excluding medical cost containment expense) of all claims was -0.1% at 3 months, -1.4% at 6 months and 2.7% at 9 months post injury. The study also confirms other intended consequences of the reform such as increasing use of medical provider networks. Overall, it appears that an easing of medical cost inflation has been established. Interpreting such changes in trends following reform requires caution and patience. Claim development trends will continue to be monitored in the future.

Analysis of Post-Reform Outcomes: Medical Benefit Payments and Medical Treatment In the California Workers' Compensation System

Background

SB 863, California's most recent workers' compensation reform bill, was signed into law in late 2012 with gradual implementation into the system in 2013 and 2014. These reforms contained benefit increases in permanent disability benefits and significant modifications to medical benefit delivery designed to increase quality of care and lower cost. It is the most comprehensive medical benefit delivery reform in more than a decade. Prior workers' compensation reforms signed into law between 2002 and 2004 were associated with an immediate reduction in medical costs in the California workers' compensation system^{1,2}. Prior Institute research noted that these declines followed the adoption of a mandatory medical treatment utilization schedule (MTUS), a 24-visit cap on physical medicine and chiropractic care, the expansion of the Official Medical Fee Schedule (including a revised pharmacy schedule and a generic drug substitution requirement), and life-time control of medical care for employers with MPN programs.³ However, in accident year 2006, there was a distinct change of direction in the trend of medical payments.⁴ Now it appears that medical cost inflation may be slowing beginning in accident year 2011. This report uses data on California claims experience through the fourth quarter of 2014 to update and expand on prior studies that identified factors that have contributed to the recent medical development trend.

Data

For this analysis, the authors compiled an updated version of its Industry Claim System.⁵ The data include policy, claim, benefit and medical service detail for California injured workers with dates of injury between January 2002 and September 2014, and medical payment and medical bill review transactions through December 2014. The database was evaluated and determined to be representative of the California insured population of injured workers. CWCI assumes that the data delivered by Industry Claim System data contributors represents a complete record of all payments and medical transactions. The final data sets allowed the authors to analyze total medical benefit payment transactions and sub-categories of medical benefits (including medical treatment, pharmacy and durable medical equipment, medical legal

⁴ WCIRB Summary of September 30, 2008 Insurer Experience, December 9, 2008

⁵ The Industry Claim System is a proprietary database maintained by the California Workers' Compensation Institute that contains detailed information, including employer and employee characteristics, medical service information, and benefit and other administrative cost information on more than 5 million workplace injuries with dates of injury between 1993 and 2014(v16B).

and medical cost containment). Claim-level analysis on issues such as average costs were limited to claims with dates of injury through September 2014 to allow for at least 3 months of development. Analysis of unit prices or medical services utilized medical bill data through December 2014.

Results

Medical and Indemnity Benefit Development

The first part of the analysis utilized medical and indemnity benefit payment transaction data. These transactions are the benefit payments captured within payors' claim systems.

Exhibit 1A shows that between AY 2002 and AY 2005, average medical payments including medical cost containment expense for all claims at 12 months post injury decreased by 22.4 percent (from \$2,702 to \$2,096), but those first-year payments subsequently increased 80.7 percent to \$3,788 by AY 2013. From AY 2006 through AY 2010, the annual rate of inflation at 12 months was 11.4%. From AY 2010 through AY 2013, the annual medical inflation rate decreased to 1.4%. In the most recent full 12 month period, from AY 2012 to 2013, the medical inflation rate at 12 months post injury was 0.4%. The recent decrease in medical inflation appears to be sustained on AY 2014 claims based on the annual rate of change in average medical payments at three months post injury (-0.2%), six months post injury (-1.3%) and nine months post injury (2.3%). Average first-year medical payments for indemnity claims (Exhibit 1B) decreased by 14.9 percent (from \$6,294 to \$5,357) between AY 2002 and AY 2005, but then increased 75.2 percent to \$9,386 by AY 2013. From AY 2006 through AY 2010, the annual rate of inflation at 12 months was 10.4%. From AY 2010 through AY 2013, the annual medical inflation rate decreased to 2.3%. In the most recent full 12 month period, from AY 2012 to 2013, the medical inflation rate at 12 months post injury among indemnity claims was 4.0%.

Exhibit 1C shows that between AY 2002 and AY 2005, average indemnity payments for all claims at 12 months post injury decreased by 11.6 percent (from \$1,686 to \$1,490), but those first-year payments subsequently increased 58.2 percent to \$2,357 by AY 2013. From AY 2006 through AY 2010, the annual rate of inflation at 12 months was 6.8%. From AY 2010 through AY 2013, the annual indemnity inflation rate decreased to 4.5%. In the most recent full 12 month period, from AY 2012 to 2013, the indemnity inflation rate at 12 months post injury was 2.8%. At the most recent valuation periods, average indemnity payments on all AY 2014 claims decreased -7.0% at 3 months after injury compared to AY 2013 indemnity claims, decreased -4.9% at 6 months post injury and increased 3.5% at 9 months post injury. Average first-year indemnity payments for indemnity claims (**Exhibit 1D**) increased by 3.3 percent (from \$4,637 to \$4,789) between AY 2002 and AY 2005 and continued to increase 56.8 percent to \$7,508 by AY 2013. Average indemnity payments on AY 2012 and AY 2013 claims at 12 months post injury increased 11.1% and 11.9% respectively.

For policies incepting on or after July 1, 2010, medical cost containment expense is no longer reported as a medical benefit but is reported as allocated loss adjustment expense. For that reason, Exhibits 1E and 1F have been calculated excluding medical cost containment expense for all accident years included in the study. Resulting development trends do not change significantly. **Exhibit 1E** shows that between AY 2002 and AY 2005, average medical payments for all claims at 12 months post injury decreased by 26.6 percent (compared to 22.4 percent with MCC) but those first-year payments subsequently increased 69.9 percent by AY 2012 (compared to 80.7 percent with MCC). It appears that the steady increase in medical payments per claim shown from AY2005 through AY 2010 may be slowing in subsequent years with a 1.7 percent annual increase at 12 months on claims from accident years 2011 – 2013. Average first-year medical payments for indemnity claims (**Exhibit 1F**) decreased by 19.6 percent between AY 2002 and AY 2005 (vs. 14.9 percent with MCC), but then increased 64.5 percent by AY 2013 (vs. 75.2 percent with MCC). Medical development at 12, 24 and 36 months for the most recently available accident years measured 2.9, 5.8 and 1.8 percent respectively (vs. 4.0, 5.7 and 1.8 percent with MCC).

Medical benefit payment transaction data were further divided into payment sub-categories of medical treatment, pharmacy and durable medical equipment, medical cost containment, and medical legal evaluations. Between AY 2005 and AY 2013, the average amount paid on all claims for medical treatment at 12 months post injury (Exhibit 2A) increased by 58.9 percent (from \$1,697 to \$2,696), while the average paid for medical treatment on indemnity claims (Exhibit 2B) increased 54.3 percent (from \$4,295 to \$6,625). During the same period, average pharmacy and durable medical equipment payments increased by 245.1 percent for all claims and by 233.9 percent for indemnity claims; average medical-legal payments increased by 162.0 percent for all claims and 151.2 percent for indemnity claims; and average medical-legal payments increased by 106.7 percent for all claims and 83.1 percent for indemnity claims. Payments for pharmacy and durable medical equipment continue to escalate at a double digit rate on the most recent accident year claims. Average pharmacy and DME payments at 24 months post injury increased on all claims by 27.2% from AY 2011 to AY 2012 and, during that same time frame, increased 24.4% on indemnity claims. Payments for independent medical review and independent bill review were in the very early stages during calendar year 2014. More significant average payments per claim will appear as payments associated with IMR and IBR accumulate in 2015.

Medical Cost Containment

Medical cost containment (MCC), also known as medical management, includes fees associated with reviewing and adjusting medical bills according to the Official Medical Fee Schedule (OMFS) or other network contract rates, the application of network access fees and reviewing utilization of specific medical services to ensure reasonable and necessary medical treatment as determined by the Medical Treatment Utilization Schedule (MTUS) or other appropriate guidelines (e.g., utilization review and independent medical review).

Exhibit 3 shows the proportion of medical cost containment expense associated with medical bill review/MPN access fees and utilization review⁶. Prior to the adoption of the MTUS, the proportion of UR payments were approximately 25 percent of all MCC payments. Following MTUS implementation in 2004, UR increased to a high point of 54.7 in the most recent transaction year, 2014. The increase from transaction year 2013 to 2014 (51.0% to 54.7%), after being relatively stable since 2007 coincides with the implementation of SB 863.

Temporary Disability (TD) Outcomes

A comparison of pre- and post-reform TD payments shows that after adjusting for statutory benefit increases⁷, the average amount paid in TD benefits in the first 12 months following the initial payment increased by only 0.5 percent under the reforms (from \$6,167 on AY 2002 – AY 2004 claims to \$6,199 on AY 2004 – AY 2013 claims -- **Exhibit 4**), while at the 24-month benchmark, the average paid in TD increased 6.7 percent (from \$8,473 on AY 2002 – AY 2004 claims to \$9,041 on AY 2004 – AY 2012 claims). The average number of TD days at the 12-month valuation decreased by 2.3 percent (from 84.0 days in AY 2002 – AY 2004 to 82.1 days in AY 2004 – AY 2013), while at the 24-month valuation the average number of TD days increased by 2.0 percent (from 115.4 days in AY 2002 – AY 2004 to 117.6 days in AY 2004 – AY 2012).

Medical Provider Networks

Overall, the network utilization rate for first-year medical visits rose from 50.5 percent in AY 2004 to 80.1 percent in AY 2013 – a relative increase of 58.6 percent (**Exhibit 5A**). For treatment within the first 30 days of injury, the network utilization rate increased from 65.6 percent in AY 2004 to 85.2 percent in AY 2014 (a relative increase of 29.9 percent); while for treatment after the first 30 days, the network utilization rate increased from 41.0 percent in AY 2004 to 77.4 percent in AY 2013 (a relative increase of 88.8 percent).

Exhibits 5B through 5D show the proportions of first-year visits and payments to network providers for three primary types of medical services. Overall, the network utilization rate is highest for evaluation and management services (85.5 percent of all E&M visits in AY 2013), followed by surgery (75.5 percent of all surgical visits in AY 2013) and physical medicine (75.1 percent of all PM visits in AY 2013).

1.027; 2009 – 1.022; 2010 – 1.017; 2011 – 1.017; 2012 – 1.012; 2013 – 1.001. (Source: WCIRB, 2015)

⁶ Data limitations in benefit and expense payment coding did not support a finer separation between medical bill review from other provider and hospital network fees.

⁷ Factors used to adjust average TD benefits to the AY 2014 level were: 2002 – 1.172; 2003 – 1.088; 2004 – 1.066; 2005 – 1.051; 2006 – 1.041; 2007 – 1.034; 2008 –

Item AC15-08-01 Third Quarter 2015 Review of Diagnostics

In 2009, the Special Committee on Diagnostics and Leading Indicators developed a comprehensive list of measures to be reviewed on a regular basis by the Claims Working Group and the Actuarial Committee in order to identify and quantify changes in claim patterns and trends and help determine the most appropriate methodologies to be used in the development of pure premium rates. The diagnostics include over one hundred measures and are segregated into the following areas (attached is an exhibit numbering guide):

- 1. Market & claim characteristic information (exhibit numbers start with M)
- 2. Claim count information (exhibit numbers start with C)
- 3. Loss development information (exhibit numbers start with D)
- 4. Claim severity information (exhibit numbers start with S)
- 5. Loss adjustment expense information (exhibit numbers start with E)

Staff prepares a summary of the diagnostic measures for the Committee on a semi-annual basis. The diagnostic summary is based on the most current available information. Please note the following:

- 1. The percentage of open permanent partial claims has continued to decrease across all regions of California (Exhibit M5).
- 2. The number of expedited hearings has remained high in the first quarter of 2015 (Exhibit M8.2).
- 3. Lien filings have increased in 2015. The 2015 increase may in part be due to the 18-month statute of limitations which became effective on dates of service on or after July 1, 2013 (Exhibit M9.2).
- 4. The number of IMRs filed increased in the first quarter of 2015 after decreasing in the fourth quarter of 2014 (Exhibit M14).
- 5. Reported indemnity claim count development appears to be moderating after many years of increases (Exhibit C1.2).
- 6. The incremental rate of claim closure has continued to increase at early maturities, while moderating at later maturities (Exhibit C3.1).
- 7. Indemnity claim counts in the first quarter of 2015 were slightly below the counts for the first quarter of 2014 following many quarters of increasing indemnity claim frequency (Exhibit C11).

Exhibit Numbering Guide July 2015

Exhibit #	Exhibit Name						
	Market/Claim Characteristics						
M1	Distribution of Calendar Year Premium and Losses						
МЗ	Total Incurred Loss Distribution by Insurer

2014	2.772		1.427	1.136											

All figures in each accident year contain information from the same combination of insurers, all of whom submitted complete data for all evaluations for that accident year. Therefore, each accident year may contain a different mix of insurers (ranging from 93% to 99% of the total California workers' compensation insured market measured using 2014 earned premium levels). California Workers' Compensation Estimated Indemnity Claim Frequency by Accident Year As of March 31, 2015

^[1] The 2012-2013 estimate is based on partial year unit statistical data. The 2013-2014 and 2014-2015 estimates are based on comparison of claim counts based on WCIRB accident year experience as of March 31, 2015 relative to the estimated change in statewide employment. Prior years are based on unit statistical data.

Y = Hazardousness-Adjusted Noncumulative Indemnity Claim Frequency

Constant	-0.020		
Std Err of Y Est	0.043		
R Squared	0.568		
No. of Observations	35		
Degrees of Freedom	30		
X Coefficient(s)		0.172	0.279
Std Err of Coef.		0.078	0.066

Indemnity Benefit Level variable is leading. The benefit level change for AY 2004 is related to the AY 2003 change in non-cumulative frequency.

-0.142

0.082

0.049

The Indemnity Benefit Level change for Ogilvie & Almaraz / Guzman in 2009-2010 is not leading.

The Indemnity Benefit Level variable excludes indemnity benefit utilization, and changes in the death and permanent total benefits.

The Indemnity Benefit Level variable has been revised due to on-leveling reassessments. See Actuarial Committee item AC09-03-03. For 1993 on, cumulative claims include both cumulative trauma and occupational disease claims. See March 19, 2014 Actuarial Committee Agenda Item III. Economic variables are historical through 2014; June 2015 UCLA Anderson Forecasts for 2015 on.

Regression is over AY 1979 through AY 2013. AY 2014 through AY 2017 are projections.

The constant term, -0.020, consists of measured offsets that recognize annual changes in real benefit levels relative to nominal benefit levels and long-term economic growth. Without these offsets, the indemnity benefit level and economic variables would project frequency to increase without bound.

^{*}AY 2013 change is based on a comparison of 2013 accidents on 2012 policies to 2012 accidents on 2011 policies.

Indemnity Claim Frequency History and Projections

Notes: The first principal component is of the annual log difference data from 1962-2014.

The first principal component of the annual log difference of the economic variables is:

1st PC of Econ Variables = -0.1491069 x Aggregate Employment + 0.9888210 x Unemployment Rate

Notes.

Cumulative injury claims include occupational disease.

Selected link ratios are geometric mean of latest two links.

The partial accident years shown represent claims occurring during the year from policies written the previous year. For example,

AY 2013 claims occurred in 2013 from policies written in 2012.

2014	0.338	0.353								
2015	0.327									

Note: All figures in each accident year contain information from the same combination of insurers, all of whom submitted complete data for all evaluations for that accident year. Therefore, each accident year may contain a different mix of insurers (ranging from 68% to 99% of the total California workers' compensation insured market measured using 2014 earned premium levels).

TOTAL DENIED CLAIMS	28,739	48,197	53,699	58,219	54,800	53,598	53,065	56,427	56,307	56,522	26,056	57,584	57,500	57,611	51,418	

Notes:

Denied Claims -- The aggregate monthly count of denied claims is by year of injury. Claims are based on the earliest denial date (DN 3 - MTC_DATE) and SROI transaction record (DN 2 - Maintenance Type Code), ie. MTC = '04' (Denial).

A significant amount of variation across years results from noncompliance and late reporting of claims. DWC believes that its database is representative of claims in California's workers' compensation (WC) industry.

Note: All figures in each accident year contain information from the same combination of insurers, all of whom submitted complete data for all evaluations for that accident year. Therefore, each accident year may contain a different mix of insurers (ranging from 76% to 99% of the total California workers' compensation insured market measured using 2014 earned premium levels).

All entries reflect the paid cost of medical cost containment programs.

- [1] The Latest Year Claim-Settlement Methodology for projecting ultimate indemnity loss ratios was based on the following:
 - a. The claim settlement rate adjustment factors calculated for the 12, 15, and 18-month evaluations contemplate indemnity payments made on closed indemnity claims only. The claim settlement rate adjustment factors calculated for subsequent evaluations contemplate separate adjustments for indemnity payments made on open and closed indemnity claims.
 - b. The claim settlement rate adjustment factors calculated for the 12, 15, 24, 27, 39, and 51-month evaluations contemplate an adjustment to reflect the impact of the 2002-2004 reforms.
- [2] The Latest Year Claim-Settlement Methodology for projecting ultimate medical loss ratios was based on the following:
 - a. The claim settlement rate adjustment factors calculated for the 12, 15, 18, 21, 24, and 27-month evaluations contemplate medical payments made on closed indemnity claims only. The claim settlement rate adjustment factors calculated for subsequent evaluations contemplate separate adjustments for medical payments made on open and closed indemnity claims.
 - b. The claim settlement rate adjustment factors calculated for the 12, 15, 24, 27, and 39-month evaluations contemplate an adjustment to reflect the impact of the 2002-2004 reforms only. The claim settlement rate adjustment factors calculated for the 51-month evaluation contemplate an adjustment to reflect the impact of both the 2002-2004 reforms and the SB 863 reforms. The claim settlement rate adjustment factors calculated for subsequent evaluations contemplate an adjustment to reflect the impact of the SB 863 reforms only.
- [3] Starting with the 39-month evaluation, all methodologies reflect an adjustment to the medical loss development tail for the impacts of medical inflation.
- [4] For all evaluations through 39-months, estimates of indemnity and medical ultimate loss ratios based on the Reform-Adjusted Paid methodology reflect adjustment for the impact of the 2002-2004 reforms only. For the 51 and 57-month evaluations, the adjustment reflects the 2002-2004 reforms for indemnity, and both the 2002-2004 reforms and the SB 863 reforms for medical. For subsequent evaluations, the adjustment reflects the SB 863 reforms only for medical.

Comparison of Projected Ultimate Loss Ratios Accident Year 2010

- [1] The Latest Year Claim-Settlement Methodology for projecting ultimate indemnity loss ratios was based on the following:
 - a. The claim settlement rate adjustment factors calculated for all evaluations contemplate separate adjustments for indemnity payments made on open and closed indemnity claims.
- b. The claim settlement rate adjustment factors calculated for the 12, 15, 24, 27, and 39-month evaluations contemplate an adjustment to reflect the impact of the 2002-2004 reforms.
- [2] The Latest Year Claim-Settlement Methodology for projecting ultimate medical loss ratios was based on the following:
 - a. The claim settlement rate adjustment factors calculated for the 12 and 15-month evaluations contemplate medical payments made on closed indemnity claims only. The claim settlement rate adjustment factors calculated for subsequent evaluations contemplate separate adjustments for medical payments made on open and closed indemnity claims.
 - b. The claim settlement rate adjustment factors calculated for the 12, 15, 24, and 27-month evaluations contemplate an adjustment to reflect the impact of the 2002-2004 reforms only. The claim settlement rate adjustment factors calculated for the 39-month evaluation contemplate an adjustment to reflect the impact of both the 2002-2004 reforms and the SB 863 reforms. The claim settlement rate adjustment factors calculated for subsequent evaluations contemplate an adjustment to reflect the impact of the SB 863 reforms only.
- [3] Starting with the 27-month evaluation, all methodologies reflect an adjustment to the medical loss development tail for the impacts of medical inflation.
- [4] For all evaluations through 33-months, estimates of indemnity and medical ultimate loss ratios based on the Reform-Adjusted Paid methodology reflect adjustment for the impact of the 2002-2004 reforms only. For the 39 and 45-month evaluations, the adjustment reflects the 2002-2004 reforms for indemnity, and both the 2002-2004 reforms and the SB 863 reforms for medical. For subsequent evaluations, the adjustment reflects the SB 863 reforms only for medical.

- [1] The Latest Year Claim-Settlement Methodology for projecting ultimate indemnity loss ratios was based on the following:
 - a. The claim settlement rate adjustment factors calculated for all evaluations contemplate separate adjustments for indemnity payments made on open and closed indemnity claims.
 - b. The claim settlement rate adjustment factors calculated for the 12 and 15-month evaluations contemplate an adjustment to reflect the impact of the 2002-2004 reforms only. The claim settlement rate adjustment factors calculated for the 24 and 27-month evaluations contemplate an adjustment to reflect the impact of the both the 2002-2004 reforms and the SB 863 reforms. The claim settlement rate adjustment factors calculated for subsequent evaluations contemplate an adjustment to reflect the impact of the SB 863 reforms only.
- [2] The Latest Year Claim-Settlement Methodology for projecting ultimate medical loss ratios was based on the following:
 - a. The claim settlement rate adjustment factors calculated for all evaluations contemplate separate adjustments for medical payments made on open and closed indemnity claims.
 - b. The claim settlement rate adjustment factors calculated for the 12 and 15-month evaluations contemplate an adjustment to reflect the impact of the 2002-2004 reforms only. The claim settlement rate adjustment factors calculated for the 24 and 27-month evaluations contemplate an adjustment to reflect the impact of the both the 2002-2004 reforms and the SB 863 reforms. The claim settlement rate adjustment factors calculated for subsequent evaluations contemplate an adjustment to reflect the impact of the SB 863 reforms only.
- [3] Starting with the 15-month evaluation, all methodologies reflect an adjustment to the medical loss development tail for the impacts of medical inflation.
- [4] Starting with the 24-month evaluation, all methodologies reflect medical losses excluding the cost of medical cost containment expenses.
- [5] For all evaluations through 21-months, estimates of indemnity and medical ultimate loss ratios based on the Reform-Adjusted Paid methodology reflect adjustment for the impact of the 2002-2004 reforms only. For the 24, 27, and 33-month evaluations, the adjustment reflects both the 2002-2004 reforms and the SB 863 reforms. For subsequent evaluations, the adjustment reflects the SB 863 reforms only.

- [1] The Latest Year Claim-Settlement Methodology for projecting ultimate indemnity loss ratios was based on the following:

 a. The claim settlement rate adjustment factors calculated for all evaluations contemplate separate adjustments for indemnity payments made on open and closed indemnity claims.
 - The claim settlement rate adjustment factors calculated for the 12, 15, and 24-month evaluations contemplate an adjustment to reflect the impact of both the 2002-2004 reforms and the SB 863 reforms. The claim settlement rate adjustment factors calculated for subsequent evaluations contemplate an adjustment to reflect the impact of the SB 863 reforms only.
- [2] The Latest Year Claim-Settlement Methodology for projecting ultimate medical loss ratios was based on the following:
 - a. The claim settlement rate adjustment factors calculated for all evaluations contemplate separate adjustments for medical payments made on open and closed indemnity claims.
- The claim settlement rate adjustment factors calculated for the 12, 15, and 24-month evaluations contemplate an adjustment to reflect the impact of both the 2002-2004 reforms and the SB 863 reforms. The claim settlement rate adjustment factors calculated for subsequent evaluations contemplate an adjustment to reflect the impact of the SB 863 reforms only.
- [3] All methodologies reflect medical losses excluding the cost of medical cost containment expenses.
- [4] For all evaluations through 24-months, estimates of indemnity and medical ultimate loss ratios based on the Reform-Adjusted Paid methodology reflect adjustment for the impact of the 2002-2004 reforms and the SB 863 reforms. For subsequent evaluations, the adjustment reflects the SB 863 reforms only.

- [1] The Latest Year Claim-Settlement Methodology for projecting ultimate indemnity loss ratios was based on the following:
 - a. The claim settlement rate adjustment factors calculated for all evaluations contemplate separate adjustments for indemnity payments made on open and closed indemnity claims.
 - b. The claim settlement rate adjustment factors calculated for the 12-month evaluation contemplate an adjustment to reflect the impact of both the 2002-2004 reforms and the SB 863 reforms. The claim settlement rate adjustment factors calculated for subsequent evaluations contemplate an adjustment to reflect the impact of the SB 863 reforms only.
- [2] The Latest Year Claim-Settlement Methodology for projecting ultimate medical loss ratios was based on the following:
 - a. The claim settlement rate adjustment factors calculated for all evaluations contemplate separate adjustments for medical payments made on open and closed indemnity claims.
- b. The claim settlement rate adjustment factors calculated for the 12-month evaluation contemplate an adjustment to reflect the impact of both the 2002-2004 reforms and the SB 863 reforms. The claim settlement rate adjustment factors calculated for subsequent evaluations contemplate an adjustment to reflect the impact of the SB 863 reforms only.
- [3] All methodologies reflect medical losses excluding the cost of medical cost containment expenses.
- [4] For the 12-month evaluation, estimates of indemnity and medical ultimate loss ratios based on the Reform-Adjusted Paid methodology reflect adjustment for the impact of the 2002-2004 reforms and the SB 863 reforms. For subsequent evaluations, the adjustment reflects the SB 863 reforms only.

- (a) Estimated ultimate severities for all accident years are derived by dividing ultimate medical losses on indemnity claims by ultimate indemnity claim counts. The estimated ultimate medical severities were derived from the projected ultimate loss ratios shown in column (6) of Exhibit 3.2 from Item AC15-06-01, presented at the Actuarial Committee Meeting on June 12, 2015.
- (b) Medical benefit level adjustment factors are based on factors shown in Exhibit 4.4 of Item AC15-06-01, excluding the impact of frequency, and including the impact of SB 863 provisions applicable to outstanding medical losses, presented at the Actuarial Committee Meeting on June 12, 2015.
- (c) Severities for accident years 2011 and subsequent do not reflect the cost of medical cost containment programs (MCCP). Severities for accident years 2010 and prior do reflect MCCP costs.

^{*} Trend is based on an exponential distribution.

Note: All figures in each accident year contain information from the same combination of insurers, all of whom submitted complete data for all evaluations for that accident year. Therefore, each accident year may contain a different mix of insurers (ranging from 76% to 99% of the total California workers' compensation insured market measured using 2014 earned premium levels).

Average Incurred Medical Loss per Reported Claim

^{*} Trend is based on an exponential distribution.

Note: All figures in each accident year contain information from the same combination of insurers, all of whom submitted complete data for all evaluations for that accident year. Therefore, each accident year may contain a different mix of insurers (ranging from 68% to 99% of the total California workers' compensation insured market measured using 2014 earned premium levels).

Note: All figures in each accident year contain information from the same combination of insurers, all of whom submitted complete data for all evaluations for that accident year. Therefore, each accident year may contain a different mix of insurers (ranging from 76% to 99% of the total California workers' compensation insured market measured using 2014 earned premium levels).

Note: All figures in each accident year contain information from the same combination of insurers, all of whom submitted complete data for all evaluations for that accident year. Therefore, each accident year may contain a different mix of insurers (ranging from 69% to 99% of the total California workers' compensation insured market measured using 2014 earned premium levels).

^{*} Entries for accident years 2010 and 2011 only reflect the paid cost of medical cost containment programs attributable to policies with effective dates prior to July 1, 2010. Entries for accident year 2012 and forward exclude the paid cost of medical cost containment programs.

^{**} Trend is based on an exponential distribution

2013	1,880,192,542	274,345	6,853	3.2%	2013	6,118	0.2%

Notes: Fiscal Year Public data prorated to CYs 50%/50%.

Insured System AY 2013 change is based on a comparison of 2013 accidents on 2012 policies to 2012 accidents on 2011 policies.

Insured System AY 2013 is preliminary.

Notes:

⁽a) Calendar year ULAE incurred is based on WCIRB expense calls. All figures in each calendar year contain information from the same combination of private insurers that submitted both the ULAE and claim count data for that calendar year. Therefore, each calendar year may contain a different mix of private insurers.

⁽b), (c) Based on WCIRB accident year experience calls. Column (c) is for information only.

⁽d) (a)/(b) x 1,000,000.

⁽f) Trend is based on an exponential distribution.

^[1] Indemnity claims inventory is the sum of indemnity claims open as of January 1 of Year N and newly-reported indemnity claims between January 1 of year N and December 31 of year N.

Item AC15-08-02 1/1/2016 Filing - Loss Adjustment Expense Review

Staff has developed the indicated policy year 2016 ratio of loss adjustment expense (LAE) to loss based on calendar year unallocated loss adjustment expense (ULAE) experience through calendar year 2014, accident year allocated loss adjustment expense (ALAE) experience as of March 31, 2015, and projection methodologies generally consistent with those reflected in the WCIRB's January 1, 2015 and July 1, 2015 Pure Premium Rate Filings. The indicated policy year 2016 ULAE and ALAE projections, including projections for the cost of medical cost containment programs (MCCP), are summarized separately below.

ULAE Projection

Exhibit 1 shows calendar year ALAE and ULAE as ratios to incurred and paid losses by type of insurer. As discussed at prior meetings, ULAE ratios for the State Compensation Insurance Fund (State Fund) are much higher than those of other insurers. In prior meetings, the Committee has also noted that the ULAE ratios of private insurers with workers' compensation premiums primarily in California are significantly higher than those for insurers with significant writings in other states ("national insurers"). As discussed at recent Committee meetings, staff has been studying ULAE data reported for California, particularly ULAE costs associated with deductible policies and costs associated with third party administrator (TPA) services, which may not be fully reflected in the ULAE reported by many national insurers. Staff's suggested approach to address this potential underreporting through additional information requested on WCIRB aggregate financial data calls is envisioned to be implemented later this year for the calendar year 2015 call (see Item AC15-03-07 of this Agenda). However, in the interim as discussed at the June 12, 2015 meeting, staff contacted several large national insurers to determine the extent to which ULAE costs for deductible policies or TPAs could be more appropriately reflected in the paid ULAE reported for calendar years 2013 and 2014 consistent with the approach envisioned for the 2015 calendar year call. As a result of this information provided by a number of these insurers, the ULAE ratios shown on Exhibit 1 for national insurers are generally somewhat closer to the average of those for other private insurers in 2013 and 2014 than in prior years. The ULAE for national insurers produced on this basis will be discussed in greater detail at the meeting.

Exhibits 2.1 and 2.2 show the average calendar year incurred ULAE as a ratio to indemnity claims open at the beginning of the calendar year on a statewide and private insurer basis, respectively. Exhibits 2.3 and 2.4 show the average calendar paid ULAE per open indemnity claim for all insurers and private insurers, respectively. The ULAE severities for calendar years 2013 and 2014 shown on Exhibit 2 reflect information submitted by several large national insurers to more appropriately reflect ULAE costs for deductibles and TPAs as discussed above and, as a result, may not be comparable to the ULAE severities for prior years. The 2014 ULAE paid per open indemnity claim for private insurers did show a significant decline in 2014.

Exhibits 3.1 through 3.5 show the policy year 2016 projection of ULAE to loss based on the relationship of calendar year statewide paid ULAE to the number of indemnity claims open at the beginning of the calendar year. This methodology assumes that ULAE paid is a function of the volume of claims handled by claims adjusters. Exhibits 4.1 through 4.5 show an analogous projection based on the experience of private insurers only. In the last several pure premium rate filings, the selected annual ULAE trend was based on the approximate average of a) the UCLA projected annual growth in California wage levels and b) the average annual rate of growth in private insurer ULAE incurred per open indemnity claim since 2005 (see Exhibit 2.2). However, inasmuch as ULAE for calendar years 2013 and 2014 reflect information submitted by several large national insurers to more appropriately reflect ULAE costs for deductibles and TPAs as discussed above, average annual growth rates comparing these years with prior years reported

on a different basis may be distorted. As a result, staff recommends basing the annual rate of growth in ULAE per open indemnity claim solely on the UCLA projected annual growth in California wage levels.

Exhibit 5 shows the projection of policy year 2016 ULAE based on the relationship of statewide calendar ULAE paid to statewide calendar year paid losses. Exhibit 6 shows an analogous projection based on the experience of private insurers only.

The upper portion Table 1 summarizes the results of these projections. As in the January 1, 2015 and July 1, 2015 Pure Premium Rate Filings, staff recommends basing the ULAE projection on the average of the ULAE projections resulting from these two methodologies based solely on the experience of private insurers. The projected ratio of policy year 2016 ULAE to loss using this approach is 8.0%.¹

For informational purposes, staff has computed additional ULAE projections based on a number of alternative methodologies that reflect underlying assumptions that differ from those reflected in the WCIRB's current ULAE projection methodology. Specifically, ULAE projections based on the projection of ULAE paid to a weighted number of indemnity claims as shown in Exhibits 7 (statewide) and 8 (private insurers only), as well as several projections based on recent calendar year ratios of ULAE to losses are shown in the lower section of Table 1. Separate projections are shown for statewide and private insurer experience.

Table 1: Projections of Policy Year 2016 ULAE to Loss

Average of Latest Two Calendar Year Ratios	11.7%	9.0%

ALAE Projection – Excluding MCCP Costs

¹ The projected ULAE to loss ratio in the July 1, 2015 Pure Premium Rate Filing was 6.3%.

For a number of years, the WCIRB has based the ALAE projection on a methodology that projects future ALAE as a function of the anticipated future number of indemnity claims and average ALAE per indemnity claim. (ALAE amounts and projections exclude MCCP costs, which are discussed separately below.)

Exhibit 9 shows private insurer average paid ALAE per reported indemnity claim by accident year. Exhibits 10.1 and 10.2 show annual ALAE severity growth percentages based on the estimated ultimate ALAE per indemnity claim for statewide and private insurers, respectively, while Exhibits 11.1 and 11.2 show annual ALAE growth percentages based on ratios of incremental paid ALAE per indemnity claims inventory for statewide and private insurers, respectively.

Exhibits 12.1 through 12.2 show the ALAE projection, excluding MCCP costs, on a statewide basis. Exhibits 13.1 through 13.3 show the ALAE projection, excluding MCCP costs, for private insurers. The projections in both Exhibits 12 and 13 were computed using a 4.5% ALAE severity trend which, as in the last several pure premium rate filings, was selected based on averaging the shorter-term (5-year) and longer-term (post-2005) average private insurer ALAE severity growth rates shown in Exhibits 10.2 and 11.2. The projections shown on Exhibits 12 and 13 also reflect the changes to the ALAE tail development methodology adopted by the Committee at the March 18, 2015 meeting.²

The upper portion of Table 2 shows the projections of ALAE as a percentage of loss, excluding the cost of MCCP. As in the January 1, 2015 and July 1, 2015 Pure Premium Rate Filings and as with ULAE, staff recommends basing the ALAE projection solely on the experience of private insurers. The projected ratio of policy year 2016 ALAE to loss excluding the cost of MCCP using this approach is 19.6%.³

For informational purposes, the WCIRB has computed additional ALAE projections (excluding MCCP) based on a number of alternative methodologies with underlying assumptions that differ from those reflected in the WCIRB's current ALAE projection methodology. Specifically, ALAE projections based on the following methodologies have been included:

- 1. Latest Year Paid ALAE Ratio Development Compared to Losses Projection Based on the Average of the Latest Two Years Exhibits 14 (statewide) and 15 (private insurers only).
- 2. Latest Year Paid ALAE to Paid Indemnity Development Compared to Losses Projection Based on the Average of the Latest Two Years Exhibits 16.1 and 16.2 (statewide) and 17.1 and 17.2 (private insurers only).
- 3. Latest Year Incremental Paid ALAE to Paid Indemnity Development Exhibits 18.1 through 18.4 (statewide) and 19.1 through 19.4 (private insurers only).

The preliminary policy year 2016 ALAE projections derived based on each of the alternative ALAE projection methodologies are shown in the lower portion of Table 2. Separate projections are shown for statewide and private insurer experience.

_

² See Item AC14-12-02 of the March 18, 2015 meeting.

³ The projected ratio of ALAE (excluding MCCP) to loss reflected in the July 1, 2015 Pure Premium Rate Filing was 19.1%.

Table 2: Projections of Policy Year 2016 ALAE (Excluding MCCP) to Loss

		,
ALAE Projection Method	Statewide ALAE Ratio	Private Insurer ALAE Ratio
Current WCIRB Methodology		
Latest Year Paid ALAE Development with Trend Based on Growth in ALAE per Indemnity Claim	17.8%	19.6%
Alternative Methodologies		
Latest Year Paid ALAE Ratio Development Compared to Losses – Projection Based on Latest Two Years	16.8%	18.2%
Latest Year Paid ALAE to Paid Indemnity Development Compared to Losses – Projection Based on Latest Two Years	16.8%	18.2%
Latest Year Incremental Paid ALAE to Paid Indemnity Loss	14.7%	14.9%

ALAE Projection - MCCP Costs

As in the January 1, 2015 and July 1, 2015 Pure Premium Rate Filings, the projection of MCCP costs is based on a methodology analogous to that used for ALAE excluding MCCP costs.

Exhibit 20 shows statewide and private insurer annual MCCP severity growth percentages based on ratios of calendar year paid MCCP costs per indemnity claims inventory. Exhibits 21 and 22 show the projection of MCCP costs in ALAE on a statewide basis and private insurer basis, respectively. As in the last several pure premium rate filings, paid MCCP costs were developed to ultimate values using the selected paid medical loss development factors rather than the ALAE development factors.⁴ A 4.5% MCCP severity trend was selected based on the private insurer MCCP severity growth rates from 2009 through 2014 shown in Exhibit 20.

Table 3 shows the preliminary projections of ALAE, including the cost of MCCP, as a percentage of loss. The projected ratio of total ALAE to loss based on private insurer experience is 27.0%.

Table 3: Projections of Policy Year 2016 ALAE to Loss

ALAE Projection Method	Statewide ALAE Ratio	Private Insurer ALAE Ratio
Separate Projections of Indemnity Claims and Average ALAE per Indemnity Claim – Excluding MCCP	17.8%	19.6%
Separate Projections of Indemnity Claims and Average MCCP Costs per Indemnity Claim	7.0%	7.4%
Total Projections of ALAE Including MCCP	24.8%	27.0%

The total preliminary ratio of LAE, including MCCP, to losses for policy year 2016 based on data evaluated as of March 31, 2015 is 35.0%.⁵

⁴ See Exhibit 2.6.1 of Item AC15-06-01 of this Agenda.

⁵ The projected LAE to loss ratio in the July 1, 2015 Pure Premium Rate Filing was 32.9%.

Notes:

- (a) See Exhibit 3.1.
- (b) See Exhibit 3.2.
- (c) (a) (b).
- (d) Estimated based on number of reported indemnity claims as of December 31, 2014 (column (3)) and selected reporting pattern (column (a)).

(e) Estimated based on projected frequency trends for accident years 2015 to 2017. The estimated frequency changes are based on the projected growth in total or overall indemnity claim frequency.

		(e) "Weighte	d" Open Clair	ns:			657,109	662,614	663,297

- (a), (b) Estimated based on the projected number of indemnity claims and selected reporting and closure patterns (see Exhibit 3.3).
 - (c) Based on the difference in the estimated numbers of reported indemnity claims between two consecutive December 31 evaluations.
 - (d) Based on the number of indemnity claims still open as of the previous year-end. For example, the number of open indemnity claims at the beginning of calendar year 2015 is the total number of indemnity claims from all accident years that were open as of December 31, 2014 (see column (4) total on Exhibit 3.3).
 - (e) The "weighted" number of open claims is the sum of the number of open claims at the beginning of the year and twice the number of claims opened during the year.

Projected Ratio of ULAE to Loss - Statewide

Based on Estimated Calendar Year ULAE Paid per Open Indemnity Claim For Policies with Effective Dates between January 1, 2016 and December 31, 2016

	Number of Open Indemnity	ULAE Paid	
Calendar	Claims at Beginning	Per Open	ULAE
<u>Year</u>	of the Year	Indemnity Claim	Paid (\$000)
	(a)	(b)	(c)
2000	267,027

2006	442,927		
2007	397,102		
2008	397,117		
2009	373,598		
2010	360,624	2,339	843,664
2011	360,339	2,351	847,160
2012	360,283	2,199	792,258
2013	365,600	2,684	981,411
2014	364,350	2,621	955,107
Projected			
2015	368,185	2,764	1,017,521
2016	373,977	2,886	1,079,417
2017	377,945	3,015	1,139,414
(d) Projected ULA	E Paid (\$000):		1,290,599
(e) Calendar Year	2014 Earned Premium (\$000):		16,198,521
(f) Projected Loss	s to Industry Average Filed Pure Premi	um Ratio:	0.692
(g) Premium Adjus	stment Factor for Calendar Year 2014:		0.975
(h) Projected Loss	ses (\$000): (e) x (f) x (g)		10,929,142
(i) Projected Ratio	o of ULAE to Losses: (d)/(h)		11.8%

- (a) Calendar years 2000 to 2014 are from column (b) of Exhibit 2.3, and 2015 to 2017 are from line (d), Exhibit 3.4.
- (b) Calendar years 2010 to 2014 are from column (d) of Exhibit 2.3. Calendar years 2015 to 2017 are projected based on applying the California average annual wage level changes of 2.7%, 2.8%, 4.4% and 4.5% for 2014 to 2017 derived from information published by the UCLA Anderson School of Business, to the ULAE paid per open indemnity claim estimated from averaging 2013 and 2014.
- (c) Column (a) x column (b).
- (d) Average of calendar years 2016 and 2017, projected 3.9 years to the approximate average midpoint of ultimate ULAE payments on 2016 policies, based on applying the an average annual change of 4.0% for 2017 to 2020 derived from the information published by the UCLA Anderson School of Business.
- (e) Based on the reported earned premium from the same group of insurers that reported the number of open indemnity claims in calendar year 2014.
- (f) See Exhibit 8 of Item AC15-06-01.
- (h) See Exhibit 5.2 of Item AC15-06-01.

		(e) "Weighte		578,827	585,608	587,817			

- (a), (b) Estimated based on the projected number of indemnity claims and selected reporting and closure patterns applicable to private insurers only (see Exhibit 4.3).
 - (c) Based on the difference in the estimated numbers of reported indemnity claims between two consecutive December 31 evaluations.
 - (d) Based on the number of indemnity claims still open as of the previous year-end. For example, the number of open indemnity claims at the beginning of calendar year 2015 is the total number of indemnity claims from all accident years that were open as of December 31, 2014 (see column (4) total on Exhibit 4.3).
 - (e) The "weighted" number of open claims is the sum of the number of open claims at the beginning of the year and twice the number of claims opened during the year.

Projected Ratio of ULAE to Loss - Private Insurers

- (a) Calendar years 2000 to 2014 are based on columns (b)+[2.0 x (c)] of Exhibit 2.3, and 2015 to 2017 are from line (e), Exhibit 3.4.
- (b) Calendar years 2010 to 2014 are from column (a) of Exhibit 2.3 divided by column (a) above, multiplied by 1,000,000. Calendar years 2015 to 2017 are projected based on applying the California average annual wage level changes of 2.7%, 2.8%, 4.4% and 4.5% for 2014 to 2017 derived from information published by the UCLA Anderson School of Business, to the ULAE paid per weighted open indemnity claim estimated from averaging 2013 and 2014.
- (c) Column (a) x column (b).
- (d) Average of calendar years 2016 and 2017, projected 3.9 years to the approximate average midpoint of ultimate ULAE payments on 2016 policies, based on applying the an average annual change of 4.0% for 2017 to 2020 derived from the information published by the UCLA Anderson School of Business.
- (e) Based on the reported earned premium from the same group of insurers that reported the number of open indemnity claims in calendar year 2014.
- (f) See Exhibit 8 of Item AC15-06-01.
- (g) See Exhibit 5.2 of Item AC15-06-01.

Projected Ratio of ULAE to Loss - Private Insurers

Based on Estimated Calendar Year ULAE Paid per Weighted Open Indemnity Claim For Policies with Effective Dates between January 1, 2016 and December 31, 2016

	Weighted	ULAE Paid	
Calendar	Number of Open	Per Weighted Open	ULAE

Projected Based on 2-Year Average of 2013 and 2014:

	Ultimate ALAE ^[6]	Ult. Ind. Counts ^[4]	Ind. Counts ^[5]
2015	1,850,055	142,375	12,994
2016	1,925,767	141,819	13,579
1/1/2017	1,953,701	140,745	13,881
(a) Projected ALAE	Incurred (\$000):		1,953,701
(b) Calendar Year 2	2014 Earned Premium ^[7] (\$000):		16,246,036
(c) Projected Loss	to Industry Average Filed Pure Premium Ratio ^[8] :		0.692
(d) Premium Adjust	ment Factor for Calendar Year 2014 ^[9] :		0.975
(e) Projected Losse	es (\$000): (b) x (c) x (d)		10,961,200
(f) Projected Ratio	of ALAE to Losses: (a)/(e)		17.8%

- [1] All paid ALAE exclude the paid cost of medical cost containment programs.
- [2] Based on the private insurers latest year paid ALAE age-to-age development from Exhibit 13.1.
- [3] Based on the latest year indemnity claim count age-to-age development from Exhibit 12.1.
- [4] Estimated based on projected frequency trends for accident years 2014 to 2017. The estimated frequency changes are based on the projected growth in total or overall indemnity claim frequency. These frequency trends were then applied to the ultimate indemnity claim counts estimated from averaging 2013 and 2014.
- [5] Severity is projected by applying an annual growth rate of 4.5%, which is based on the approximate average of the private insurers selected rate of growth in (i) estimated ultimate accident year ALAE severities from Exhibit 10.2 and (ii) paid ALAE per open indemnity claim from Exhibit 11.2, to the ultimate ALAE severity estimated from averaging 2013 and 2014.
- [6] Column(6) x Column(7) / 1,000.
- [7] Based on the reported earned premium for calendar year 2014 from the same group of insurers that reported the paid ALAE in column (1) and the indemnity claim counts in column (4) by accident year as of March 31, 2015.
- [8] See Exhibit 8 of Item AC15-06-01.
- [9] See Exhibit 5.2 of Item AC15-06-01.

Paid Allocated Loss Adjustment Expense Development - Private Insurers As of March 31, 2015

Projected Based on 2-Year Average of 2013 and 2014:

	<u>Ultimate ALAE^[6]</u>	Ult. Ind. Counts ^[4]	Ind. Counts ^[5]
2015	1,795,119	133,633	13,433
2016	1,868,584	133,112	14,038
1/1/2017	1,895,688	132,103	14,350
(a) Projected ALAE I	ncurred (\$000):		1,895,688
(b) Calendar Year 20	014 Earned Premium ^[7] (\$000):		14,563,475
(c) Projected Loss to	Industry Average Filed Pure Premium Ratio ^[8] :		0.658
(d) Premium Adjustm	nent Factor for Calendar Year 2014 ^[9] :		1.007
(e) Projected Losses	(\$000): (b) x (c) x (d)		9,649,846
(f) Projected Ratio o	f ALAE to Losses: (a)/(e)		19.6%

Notes:

- [1] All paid ALAE exclude the paid cost of medical cost containment programs.
- [2] Based on the latest year paid ALAE age-to-age development from Exhibit 13.1.
- [3] Based on the latest year indemnity claim count age-to-age development from Exhibit 13.2.
- [4] Estimated based on projected frequency trends for accident years 2014 to 2017. The estimated frequency changes are based on the projected growth in overall indemnity claim frequency. These frequency trends were then applied to the ultimate indemnity claim counts estimated from averaging 2013 and 2014.
- [5] Severity is projected by applying an annual growth rate of 4.5%, which is based on the approximate average of the selected rate of growth in (i) estimated ultimate accident year ALAE severities from Exhibit 10.2 and (ii) paid ALAE per open indemnity claim from Exhibit 11.2, to the ultimate ALAE severity estimated from averaging 2013 and 2014.
- [6] Column(6) x Column(7) / 1,000.
- [7] Based on the reported earned premium for calendar year 2014 from the same group of private insurers that reported the paid ALAE in column (1) and the indemnity claim counts in column (4) by accident year as of March 31, 2015.
- [8] Based on analogous Exhibit 8 of AC15-06-01, applicable to private insurers only.
- [9] Based on analogous Exhibit 5.2 of AC15-06-01, applicable to private insurers only.

(e)	Projected Losses (\$000): (b) x (c) x (d)		10,961,200
(f)	Projected Ratio of MCCP to Losses: (a)/(e)		7.0%

- [1] Based on paid medical cumulative loss development factors from Exhibit 2.6.1 of Item AC15-06-01.
- [2] Based on the latest year indemnity claim count age-to-age development from Exhibit 12.2.
- [3] Estimated based on projected frequency trends for accident years 2014 to 2017. The estimated frequency changes are based on the projected growth in total or overall indemnity claim frequency. These frequency trends were then applied to the ultimate indemnity claim counts estimated from averaging 2013 and 2014.
- ^[4] Severity is projected by applying an annual growth rate of 4.5%, which is based on the approximate average rate of growth, based on private insurers, in paid MCCP per indemnity claim from Exhibit 20, to the ultimate MCCP severity estimated from averaging 2013 and 2014.
- [5] Column(6) x Column(7) / 1,000.
- [6] Based on the reported earned premium for calendar year 2014 from the same group of insurers that reported the paid MCCP in column (1) and the indemnity claim counts in column (4) by accident year as of March 31, 2015.
- [7] See Exhibit 8 of Item AC15-06-01.
- [8] See Exhibit 5.2 of Item AC15-06-01.

Projected Ratio of MCCP to Losses - Private Insurers

Based on Estimated Accident Year Indemnity Claim Frequency and MCCP Severity For Policies with Effective Dates between January 1, 2016 and December 31, 2016

							Estimated	
	Paid			Indemnity	Cumulative		Ultimate	
	MCCP	Cumulative	Estimated	Claim	Count	Estimated	MCCP Per	
	@3/31/15	Development	Ultimate	Counts	Development	Ultimate	Indemnity	Annual
Year	(in \$000)	Factors ^[1]	MCCP	@3/31/15	Factors ^[2]	Ind. Counts	<u>Claim</u>	<u>change</u>
	(1)	(2)	(3)=(1)x(2)	(4)	(5)	(6)=(4)x(5)	$(7)=(3)/(6) \times 1000$	
2011	264,193	2.058	543,708	114,884	1.021	117,258	4,637	
2012	231,620	2.507	580,670	122,384	1.034	126,508	4,590	-1.0%
2013	181,952	3.482	633,556	125,500	1.063	133,356	4,751	3.5%
2014	93,323	6.790	633,662	114,031	1.178	134,309	4,718	-0.7%

Projected Based on 2-Year Average of 2013 and 2014:

	Ultimate MCCP ^[6]	Ult. Ind. Counts ^[4]	Ult.MCCP per Ind. Counts ^[5]
2015	676,066	133,633	5,059
2016	703,734	133,112	5,287
1/1/2017	713,942	132,103	5,404
` '	(\$000): 014 Earned Premium ^[7] (\$000): o Industry Average Filed Pure Premium Ratio ^[8] :		713,942 14,563,475 0.658
(d) Premium Adjustm	nent Factor for Calendar Year 2014 ^[9] :		1.007
(e) Projected Losses	s (\$000): (b) x (c) x (d)		9,649,846
(f) Projected Ratio o	f MCCP to Losses: (a)/(e)		7.4%

- [1] Based on the analogous paid medical cumulative loss development factors from Exhibit 2.6.1, applicable to private insurers only.
- [2] Based on the latest year indemnity claim count age-to-age development from Exhibit 13.2.
- [3] Estimated based on projected frequency trends for accident years 2014 to 2017. The estimated frequency changes are based on the projected growth in total or overall indemnity claim frequency. These frequency trends were then applied to the ultimate indemnity claim counts estimated from averaging 2013 and 2014.
- ^[4] Severity is projected by applying an annual growth rate of 4.5%, which is based on the approximate average rate of growth, based on private insurers, in paid MCCP per indemnity claim from Exhibit 20, to the ultimate MCCP severity estimated from averaging 2013 and 2014.
- [5] Column(6) x Column(7) / 1,000.
- ^[6] Based on the reported earned premium for calendar year 2014 from the same group of private insurers that reported the paid MCCP in column (1) and the indemnity claim counts in column (4) by accident year as of March 31, 2015.
- [7] Based on analogous Exhibit 8 of item AC15-06-01, applicable to private insurers only.
- [8] Based on analogous Exhibit 5.2 of item AC15-06-01, applicable to private insurers only.

Item AC15-08-03 1/1/2016 Filing - Review of Alternative Loss Projection Methodologies

For a number of years, the WCIRB has included alternative loss development and trending methodology projections in its pure premium rate filing submissions.

Loss Development Methodologies

The loss development projections based on the methodology reflected in the WCIRB's summary analysis of March 31, 2015 experience, included in Item AC15-06-01 of this Agenda, were based on latest year paid development factors with adjustments for the impact of Senate Bill No. 863 (SB 863). Attached for the Committee's review are a number of alternative loss development projections based on methodologies that have been included, for informational purposes, in prior pure premium rate filing materials or have been discussed at prior meetings. Specifically, alternative loss ratio projections, based on March 31, 2015 experience and derived using the following loss development methodologies and the trending methodology reflected in the analysis included in Item AC15-06-01 of this Agenda are included:

- 1. 3-Year Average Unadjusted Incurred Loss Development Exhibits 1.1 through 1.3.
- 2. Latest Year Unadjusted Incurred Loss Development Exhibits 2.1 through 2.3.
- 3. Latest Year Incurred Loss Development Adjusted for Changes in Case Reserve Adequacy Level Exhibits 3.1 through 3.11.
- 4. Latest Year Incurred Loss Development Adjusted for Changes in Insurer Mix Exhibits 4.1 through 4.3.
- 5. 3-Year Average Unadjusted Paid Loss Development Exhibits 5.1 through 5.3.
- 6. Latest Year Unadjusted Paid Loss Development Exhibits 6.1 through 6.3.
- 7. 3-Year Average Paid Loss Development Adjusted for Changes in Claim Settlement Rates and Reforms Exhibits 7.1 through 7.15.
- 8. Latest Year Paid Loss Development Adjusted for Changes in Claim Settlement Rates and Reforms Exhibits 8.1 through 8.3.
- 9. Latest Year Paid Loss Development Adjusted for Changes in Insurer Mix Exhibits 9.1 through 9.3.
- Expected Loss Ratio with a Bornheutter-Ferguson (BF) Adjustment Based on Paid Loss Development to 27 Months with Latest Year Paid Loss Development Adjusted for Reforms after 27 Months – Exhibits 10.1 through 10.5.

A summary of the preliminary policy year 2016 loss ratio projections based on the alternative loss development methodologies described above is shown in Table 1.

Table 1: Projected Policy Year 2016 Loss Ratios
Based on Alternative Loss Development Methodologies

Based on Alternative Loss Devel	Indemnity	Medical	Total
Loss Development Methodologies	Loss Ratio	Loss Ratio	Loss Ratio
Current WCIRB Methodology			
Latest Year Paid Adjusted for SB 863	0.270	0.422	0.692
Alternative Methodologies			
Incurred Methodologies			
3-Year Average (Unadjusted)	0.258	0.430	0.688
Latest Year (Unadjusted)	0.250	0.394	0.644
Latest Year Adjusted for Changes in Case Reserve Adequacy Level	0.267	0.431	0.698
Latest Year Adjusted for Changes in Insurer Mix	0.250	0.390	0.640
Paid Methodologies			
3-Year Average (Unadjusted)	0.266	0.429	0.695
Latest Year (Unadjusted)	0.258	0.415	0.673
3-Year Average Adjusted for Changes in Claim Settlement Rates and Reforms	0.273	0.434	0.707
Latest Year Adjusted for Changes in Claim Settlement Rates and Reforms	0.264	0.417	0.681
Latest Year Adjusted for Changes in Insurer Mix	0.254	0.403	0.657
BF Paid to 27 Months; Latest Year Reform-Adjusted after 27 Months	0.278	0.429	0.707

Trending Methodologies

The trending projections reflected in the summary analysis of March 31, 2015 experience, included in Item AC15-06-01 of this Agenda, were based on the average of the latest two years' on-level loss ratios with separate projections of claim frequency and claim severity growth applied. The claim frequency growth estimates were based on the preliminary 15-month frequency change for accident year 2014 and the WCIRB's indemnity claim frequency model for accident years 2015 through 2017. The severity growth estimates were based on the approximate average of the longer-term (post-2005) average on-level severity trend and the five-year average on-level severity trend, excluding accident year 2014 in the trend selection inasmuch as 2014 was a significant year of transition for SB 863.

Attached for the Committee's review are a number of alternative trending projections based on methodologies that have been included, for informational purposes, in prior pure premium rate filing materials or have been discussed at prior meetings. Specifically, alternative loss ratio projections, based on March 31, 2015 experience, derived using the loss development methodologies reflected in the analysis included in Item AC15-06-01 of this Agenda and the following trending methodologies are included:

1. Separate Projections of Frequency and Severity Growth Applied to the Latest Year Only – Exhibits 11.1 and 11.2.

- 2. Separate Projections of Frequency and Severity Growth Applied to the Latest Two Years and then Averaged, with Severity Growth Based on the Longer-term (Post-2005, Excluding 2014) Average Severity Trend Exhibits 12.1 and 12.2.
- 3. Separate Projections of Frequency and Severity Growth Applied to the Latest Two Years and then Averaged, with Severity Growth Based on the 5-Year (Excluding 2014) Average Severity Trend Exhibits 13.1 and 13.2.
- 4. Longer-term (Post-2005, Excluding 2014) On-Level Loss Ratio Exponential Applied to the Latest Two Years' Loss Ratios and then Averaged Exhibits 14.1 and 14.2.
- 5. 5-Year (Excluding 2014) On-Level Loss Ratio Exponential Trend (Excluding 2014) Applied to the Latest Two Years' Loss Ratios and then Averaged Exhibits 15.1 and 15.2.
- 6. 5-Year (Excluding 2014) On-Level Loss Ratio Exponential Trend Applied to the Latest Year Only Exhibits 16.1 and 16.2.
- 7. 5-Year (Excluding 2014) On-Level Loss Ratio Exponential Trend Excluding the Impact of Projected Wage Level Growth Applied to the Latest Two Years' Loss Ratios and then Averaged Exhibits 17.1 and 17.2.

A summary of the preliminary policy year 2016 loss ratio projections based on the alternative trending methodologies described above is shown in Table 2.

Table 2: Projected Policy Year 2016 Loss Ratios Based on Alternative Trending Methodologies

Trending Methodologies	Indemnity Loss Ratio	Medical Loss Ratio	Total Loss Ratio
Current WCIRB Methodology			
Separate Projections of Frequency and Severity, with Indemnity Severity at 0% and Medical Severity at +2.5%, Applied to the Latest Two Years	0.270	0.422	0.692
Alternative Methodologies			
Separate Projections of Frequency and Severity Applied to the Latest Year	0.265	0.407	0.672
Separate Projections of Frequency and Severity, with Indemnity Severity at +1.2% and Medical Severity at +3.9%, Applied to the Latest Two Years	0.280	0.440	0.720
Separate Projections of Frequency and Severity, with Indemnity Severity at -0.9% and Medical Severity at +0.6%, Applied to the Latest Two Years	0.263	0.399	0.662
Post-2005 On-level Loss Ratio Exponential Trend Applied to the Latest Two Years	0.299	0.477	0.776
5-Year On-level Loss Ratio Exponential Trend Applied to the Latest Two Years	0.300	0.459	0.759
5-Year On-level Loss Ratio Exponential Trend Applied to the Latest Year	0.290	0.436	0.726
5-Year On-level Loss Ratio Exponential Trend Excluding the Impact of Wage Level Growth Applied to the Latest Two Years	0.304	0.474	0.778

⁽b) Based on AC 15-06-01, Exhibit 4.4.

⁽c) See AC 15-06-01, Exhibit 5.2.

⁽d) These on-level ratios were projected based on an estimated annual medical severity trend from AC 15-06-01, Exhibit 6.4, the actual frequency trend for accident year 2014 from AC 15-06-01, Exhibit 12, and projected frequency trends for accident years 2015, 2016, and 2017 from AC 15-06-01, Exhibit 6.1; these trends were then separately applied to the 2013 and 2014 on-level ratios.

2014	9,738						

⁽a) Represents average paid indemnity on closed claims only. All evaluations are brought to the accident year 2014 benefit level based on benefit factors shown in AC15-06-01, Exhibit 4.1, excluding utilization impacts.

Source: Accident year experience of insurers with available claim count data

⁽b) Trend is based on an all-year exponential distribution.

⁽c) Latest evaluation for each accident year is brought to the accident year 2014 benefit level based on benefit factors shown in AC15-06-01, Exhibit 4.1, excluding utilization impacts. Evaluations prior to the latest evaluation are determined by adjusting the latest accident year average indemnity case reserves by the selected annual paid indemnity severity trend on closed claims (Item B) of 4.0%.

- (a) Represents average paid medical on all claims. All evaluations are brought to the accident year 2014 benefit level based on benefit factors shown in AC15-06-01, Exhibit 4.4, excluding utilization impacts.
- (b) Trend is based on an all-year exponential distribution.
- (c) Latest evaluation for each accident year is brought to the accident year 2014 benefit level based on benefit factors shown in AC15-06-01, Exhibit 4.4, excluding utilization impacts. Evaluations prior to the latest evaluation are determined by adjusting the latest accident year average medical case reserves by the selected annual paid medical severity trend on all claims (Item B) of 7.0%.

Based on AC 15-06-01, Exhibit 1. Accident years 2011 and subsequent do not reflect the paid cost of medical cost containment (a) programs (MCCP). Accident years 2010 and prior do reflect paid MCCP costs. No adjustment has been made to MCCP costs in medical reserves.

Age-to-age factors for developing accident years 2010 to 2014 were adjusted for changes in indemnity case reserve levels based (b) on estimated annual severity trends on closed indemnity claims (see Exhibit 3.4, Item K). Age-to-age factors for developing accident years prior to 2010 are selected as the latest year age-to-age factors shown in AC 15-06-01, Exhibit 2.1.

Age-to-age factors for developing accident years 2010 to 2014 were adjusted for changes in medical case reserve levels based on (c) estimated annual medical severity trend on all claims (see Exhibit 3.8, Item J). Age-to-age factors for developing accident years prior to 2010 are selected as the latest year age-to-age factors shown in AC 15-06-01, Exhibit 2.2.

2013	2,723	6,417				
2014	2,792					

- (a) Ratio of closed indemnity claim counts (Item C) to the estimated ultimate indemnity claim counts (Item B) for that accident year.
- (b) The claim counts for the latest evaluation of each accident year are equal to the reported number of closed indemnity claims. All prior evaluations shown are the product of the latest ultimate indemnity claim settlement ratio (Item D) and the ultimate indemnity claim counts (Item B) for that accident year.

G. Adjusted Average Paid Indemnity per Closed Claim (c)

2013	403,258	782,920					
2014	420,701						

- (e) Each amount is equal to the product of [the average monthly indemnity payment per open indemnity claim] and [the number of months for the current evaluation]. For evaluations indicating claim settlement rate decreases, the average monthly indemnity payment per open indemnity claim at the prior evaluation is used. For evaluations indicating claim settlement rate increases, the average monthly indemnity payment per open indemnity claim at the same evaluation is used.
- (f) Each amount is equal to [the difference between unadjusted and adjusted closed indemnity claim counts (Items C and E)] multiplied by the corresponding [average paid indemnity per open claim for indemnity claims in transition (Item J)].
- (g) Each amount is the sum of [paid indemnity on open claims (Item I)] and the corresponding [incremental changes in paid indemnity on open claims resulting from the impact of changes in claim settlement rates (Item K)].

M. Adjusted Total Paid Indemnity (in \$000) (h)

Accident	Evaluated as of (in months)

2012	2,827	6,548	10,986				
2013	2,974	6,685					
2014	2,975						

- (a) Ratio of closed indemnity claim counts (Item C) to the estimated ultimate indemnity claim counts (Item B) for that accident year.
- (b) The claim counts for the latest evaluation of each accident year are equal to the reported number of closed indemnity claims. All prior evaluations shown are the product of the latest ultimate indemnity claim settlement ratio (Item D) and the ultimate indemnity claim counts (Item B) for that accident year.

G. Adjusted Average Paid Medical per Closed Indemnity Claim (c)

2014	520,481					

⁽c) Adjusted based on ultimate indemnity claim settlement ratios (Item D) and assuming a loglinear relationship between maturities.

⁽d) Each amount is equal to the product of [adjusted closed indemnity claim counts (Item E)] and [adjusted average paid medical per closed indemnity claim (Item G)], and divided by \$1,000.

J. Average Paid Medical per Open Indemnity Claim for Indemnity Claims in Transition (e)

2013	520,049	913,029				
2014	520,481					

- (e) Each amount is equal to the product of [the average monthly medical payment per open indemnity claim] and [the number of months for the current evaluation]. For evaluations indicating claim settlement rate decreases, the average monthly medical payment per open indemnity claim at the prior evaluation is used. For evaluations indicating claim settlement rate increases, the average monthly medical payment per open indemnity claim at the same evaluation is used.
- (f) Each amount is equal to [the difference between unadjusted and adjusted closed indemnity claim counts (Items C and E)] multiplied by [the corresponding average paid medical per open indemnity claim for indemnity claims in transition (Item J)].
- (g) Each amount is the sum of [paid medical on open indemnity claims (Item I)] and the corresponding [incremental changes in paid medical on open indemnity claims resulting from the impact of changes in indemnity claim settlement rates (Item K)].

2009		1.400	1.233	1.143	1.090
2010	1.913	1.420	1.234	1.129	
2011	1.992	1.403	1.213		
2012	1.973	1.385			
2013	1.932				
Latest Year	1.932	1.385	1.213	1.129	1.090

(h) Each amount is the sum of [adjusted paid medical on closed indemnity claims (Item H)], [adjusted paid medical on open indemnity claims (Item L)] and [paid medical on medical-only claims (Item M)]. Cumulative values of the paid cost of medical cost containment programs are also added to the totals at each valuation for accident years 2010 and subsequent in order to adjust the totals to an equivalent basis for development purposes.

3-Year Average	1.967	1.407	1.229	1.139	1.094

- (i) Development factors are based on paid medical losses from the same insurer mix as that used in the adjustment for changes in claim settlement rates and applied in the calculation of the development factors in Item O.
- (j) Each factor represents the change in age-to-age development factors from Item P to those in Item O.
- (k) Each factor is the product of [1.0 + the impact of adjustment for changes in claim settlement rates (Item Q)] and [the adjusted paid medical age-to-age development factor from AC 15-06-01, Exhibit 2.4.1].

- (a) Based on AC 15-06-01, Exhibit 1. Column 5 is shown for informational purposes only.
- (b) Age-to-age factors for developing accident years 2010 to 2014 were adjusted for changes in claim settlement rates based on 3-year average selections (see Exhibit 7.6, Item Q). The cumulative loss development factors for developing accident years 2011 through 2014 are adjusted for the impact of SB 863 (see AC 15-06-01, Exhibit 2.5.1).
- (c) Based on experience evaluated as of March 31, 2015. Reflects an adjustment for SB 863 of -4.9% applied to payments made before January 1, 2013, and adjustments for RBRVS of 0.9% applied to payments made before January 1, 2014, and 0.6% applied to payments made before January 1, 2015
- (d) Age-to-age factors for developing accident years 2010 to 2014 were adjusted for changes in claim settlement rates based on 3-year average selections (see Exhibit 7.12, Item R). Age-to-age factors for developing accident years 2005 to 2014 reflect an adjustment for SB 863 of -4.9% applied to payments made before January 1, 2013, and adjustments for RBRVS of 0.9% applied to payments made before January 1, 2014, and 0.6% applied to payments made before January 1, 2015.

2014	0.247	1.007	0.889	0.279
				Projected (d)
2015				0.295
2040				0.004

2015	0.295
2016	0.301
1/1/2017	0.304

- (a) See AC 15-06-01, Exhibit 3.1.
- (b) Based on AC 15-06-01, Exhibit 4.1.
- (c) Based on AC 15-06-01, Exhibit 5.2.
- (d) These on-level ratios were projected by separately applying an exponential trend of approximately 1.9% based on the 2008 to 2013 on-level indemnity to industry average filed pure premium ratios to each of the 2013 and 2014 on-level indemnity to industry average filed pure premium ratios. Each stated projection is equal to the average of the corresponding trended on-level ratios.

Projected On-Level Accident Year Medical Loss to Industry Average Filed Pure Premium Ratios Post-2008 Exponential Trend with no Adjustment for the Impact of Wage Inflation Applied to Accident Years 2013 and 2014 Based on Experience as of March 31, 2015

	(1)	(2)	(3)	(4)	(5)

2014	0.369	1.019	0.889	0.423	0.471

	Projected (d)
2015	0.457
2016	0.468
1/1/2017	0.474

- (a) See AC 15-06-01, Exhibit 3.2.
- (b) See AC 15-06-01, Exhibit 4.4.
- (c) Based on AC 15-06-01, Exhibit 5.2.
- (d) These on-level ratios were projected by separately applying an exponential trend of approximately 2.5% based on the 2005 to 2013 on-level medical to industry average filed pure premium ratios to each of the 2013 and 2014 on-level medical to industry average filed pure premium ratios. Each stated projection is equal to the average of the corresponding trended on-level ratios.
- (e) These on-level ratios include MCCP and are used to calculate the exponential trend to project future on-level ratios.

Item AC15-08-04 Computation of Industry Average Filed Rates as of 7/1/2015

In 2011, the WCIRB was directed by the California Insurance Commissioner to modify the manner in which it presents its proposed advisory pure premium rates by benchmarking the average proposed pure premium rate against the industry average filed pure premium rate rather than the average of the advisory pure premium rates in effect. In response, the WCIRB, using a process developed in consultation with California Department of Insurance (CDI) staff, has been computing the industry average filed pure premium rate and using that as a benchmark for advisory pure premium rate indications beginning with the January 1, 2012 Pure Premium Rate Filing.

Staff anticipates benchmarking the proposed January 1, 2016 advisory pure premium rates to the industry average filed pure premium rates as of July 1, 2015. A summary of the computation of the industry average filed pure premium rates as of July 1, 2015 will be presented at the meeting.
