| 1221 Broadway, Suite 900• Oakland, CA 94612•415.777.0777• Fax 415.778.7007• www.wcirb.com• wcirb@wcirb.com |  |  |  |

Released: March 9, 2021

Due to the coronavirus (COVID-19) pandemic, this meeting is being held via webinar teleconference.

## Click here to register for the meeting.

After registering, you will receive a confirmation email containing information about joining the webinar.

## I. Approval of Minutes

Meeting held on February 16, 2021
II. Working Group Meeting Summaries

None
III. Unfinished Business
A. AC20-08-04: Impact of Economic Slowdown on Pure Premium Rate Indications
B. AC21-02-02: Pandemic Impact on 2020 Development

## IV. New Business

A. AC21-03-01: First Quarter 2021 Review of Diagnostics
B. AC21-03-02: 12/31/2020 Experience Review
C. AC21-03-03: Review of COVID-19 Claim Diagnostics
D. AC21-03-04: 9/1/2021 Filing - COVID-19 Claim Cost Projection
E. AC21-03-05: Pandemic Impact on Premium Measures

## V. Matters Arising at Time of Meeting

VI. Next Meeting Date: April 15, 2021

## VII. Adjournment

## Antitrust Notice

As members of the Workers' Compensation Insurance Rating Bureau of California, you are bound, when involved in meetings or other activities of the WCIRB California, to limit your actions (and discussions other than social ones) to matters relating to the business of the WCIRB California. Matters that do not relate directly to WCIRB California business should be avoided. Members should particularly avoid discussions or conduct that could be construed as intended to affect competition (or access to markets). Thus, as members, you should not discuss or pursue the business interests of individual insurers or others, including, in particular, the plans of individual members involving, or the possibility or desirability of (a) raising, lowering, or stabilizing prices (premiums or commissions); (b) doing business or refusing to do business with particular, or classes of, insurers, reinsurers, agents, brokers, or insureds, or in particular locales; or (c) potential actions that would affect the availability of products or service either generally or in specific markets or locales.

## Notice

The information in this Agenda was developed by the Workers' Compensation Insurance Rating Bureau of California (WCIRB) for the purpose of assisting the WCIRB Actuarial Committee. The WCIRB cannot make any guarantees if this information is used for any other purpose and the WCIRB shall not be liable for any damages, of any kind, whether direct, indirect, incidental, punitive or consequential, arising from the use of or reliance upon this information for any other purpose.

## Item AC20-08-04

## Impact of Economic Slowdown on Pure Premium Rate Indications

At the August 4, 2020 meeting, the Committee reviewed an analysis of economic changes related to the COVID-19 pandemic and their impacts on the indicated January 1, 2021 pure premium rates. This item presents an update of this analysis as it pertains to the September 1, 2021 Pure Premium Rate Filing.

## Statewide Average Wage

Changes in the statewide average wage flow directly into the proposed pure premium rates and are also used for benefit on-leveling. Historical changes from the Bureau of Labor Statistics (BLS) are used for past years. For future years, projections are made as an average of forecasts made by the California Department of Finance (CDOF) and the UCLA Anderson School of Business (UCLA). (See Exhibit 5.1 of Item AC21-03-02. ${ }^{1}$ ) In the January 1, 2021 Pure Premium Rate Filing, due to concerns that the average wage growth projection for 2020 may be overstated due to significantly greater job losses among lower wage employees, the WCIRB adjusted the 2020 projected wage growth downward based on the average difference between the mean and median wage growth in the Great Recession.

The most current forecast from CDOF is from November 2020, while the most recent forecast from UCLA is from December 2020. Current wage growth projections based on the average of these two projections are $6.7 \%$ for 2020, $0.5 \%$ for 2021, 2.1 $\%$ for 2022, and $3.1 \%$ for 2023.

Both forecasts show an average wage calculated as projected total wages divided by projected total employment. Given the extreme changes in the employment mix, the use of an average wage would be artificially inflated as lower wage industries and employees have suffered greater employment declines. ${ }^{2}$ Staff has derived two potential adjustments to an average wage change to account for the changing industrial mix that were initially discussed at the August 4, 2020 meeting.

The first adjustment uses data through December 2020 from the BLS Current Employment Statistics data set. This method calculates overall average wages at the industrial mix from the current and previous year to determine the amount of change due to the industrial mix. The largest change due to mix from 2007 through 2019 was $-0.5 \%$ in 2009. The change due to mix in 2020 is $1.8 \%$, i.e., the overall statewide average wage will be artificially inflated by $1.8 \%$ due solely to the change industrial mix. This data series does not include agriculture and no forecasts are available. The derivation of this index is shown in Exhibit 1.

The second adjustment combines historical annual industrial wage relativities through 2019 from the BLS Quarterly Census of Employment and Wages (QCEW) data series with industrial employment forecasts from UCLA. Staff calculated estimates via this methodology for 2020 through 2023 assuming future industry wage relativities remained equal to either the latest $1-, 3-$, or 5 -year average. The timeframe used to select the industry relativities was immaterial. This method shows $1.8 \%$ inflation due to mix in $2020,-0.5 \%$ in $2021,0 \%$ in 2022 and $0.2 \%$ in 2023. These calculations are shown in Exhibit 2.

Given the very large observed change in average wage in 2020 and the very small change in 2021, staff has completed a sensitivity analysis to reflect the differing levels of employment change by wage level for workers within an industry. This adjustment relies on data from the American Community Survey (ACS) that has been mapped to a classification level for use in classification ratemaking. ${ }^{3}$

[^0]To determine the potential impacts of greater employment loss at lower wage levels within an industry, classification mix is held constant so that it remains independent of the industry mix adjustments detailed above. Employment changes are assumed to differ by wage quartile under several alternative assumptions and the impact on the average wage is calculated. A sensitivity analysis contemplating several different assumed employment changes by wage level is shown in Exhibit 3 . Staff will discuss issues with selecting an appropriate employment change distribution by wage level at the meeting.

## Indemnity Claim Frequency

The WCIRB's indemnity frequency model predicts the change (as measured by a log difference) in the mix-adjusted non-cumulative indemnity claim frequency as a linear combination of the changes in the indemnity benefit level, the cumulative injury index (the ratio of cumulative trauma indemnity claims to all non-cumulative trauma indemnity claims), and economic variables. Projections of changes in the indemnity benefit level are made using proposed legislation and/or cost of living adjustments. Changes in the economic variables are based on UCLA forecasts. The WCIRB has not yet found a reasonable approach to regularly project future changes in the cumulative injury index.

The economic variable used in the model are the first principal component decomposition of the changes in aggregate employment and the unemployment rate. The magnitude of the change in 2020 is more than twice as much as the next most extreme observation going back to the 1960s, which occurred during the Great Recession in 2009 and is greater in magnitude than 2007 through 2010 combined. The economic variable series is shown in Exhibit 4.

At the August 4, 2020 meeting, staff presented investigations into potentially capping the magnitude of the economic variables for use in frequency projections. Capping at any level resulted in a decrease in model performance and the Committee agreed that no capping adjustment was appropriate for the January 1, 2021 Pure Premium Rate Filing.

In the WCIRB frequency model, the cumulative injury index is calculated as the ratio of cumulative frequency to non-cumulative frequency. This variable is intended to be a proxy for the level of discretionary claim filing and is the most predictive explanatory variable in the model. To date, staff has not been able to produce a reliable projection of this variable and no change forecast is typically used in the model. As shown in the WCIRB's recent study of the impact of economic changes on claim frequency, ${ }^{4}$ during the prior recession, there was a large uptick in the cumulative injury index. Alternate frequency projections using observed values of the change in the index from the prior two recessions are shown in Exhibit $5 .{ }^{5}$ The adjustment was used in projecting claim frequency in the January 1, 2021 Pure Premium Rate Filing. As shown in Exhibit 10 of Item AC21-03-02, the preliminary 2020 claim frequency change based on changes in total reported indemnity claims (excluding COVID-19 claims) and changes in total employment is $-5.7 \%{ }^{6}$ This compares to the frequency model projection including the impact of shifting industrial mix of $-9.3 \%$.

The final frequency-related adjustment is for industrial mix. Exhibit 6 shows a contracted version of Exhibit C7.2 of the standard set of diagnostic exhibits reviewed by the Committee twice a year, which shows the history and projections of the frequency model. Changes in inter-class frequency show the change in overall frequency due to changes in industrial mix. Accident years up to 2019 use USR data at a class level to calculate the change. For AYs 2020 through 2023, inter-class changes use observed industry frequency relativities with industry exposure distributions adjusted for forecast employment changes from UCLA.

[^1]
## Indemnity Claim Severity

The WCIRB tracks changes in indemnity claim severity due to shifting class mix in Exhibit S15 of the standard set of diagnostic exhibits reviewed by the Committee twice a year. These changes have been very modest over time and have not historically been reflected in pure premium rate filing projections. Given the magnitude of current economic changes, staff has calculated a projected change in indemnity claim severity due to changes in the industrial mix. This method uses historic industry severity relativities from USR data and estimated future indemnity count distributions based on forecast changes in employment mix.

Exhibit 7 shows the derivation of projected indemnity count distributions by industry. Standard exception data has been allocated to industry using previous WCIRB studies. Some industries shown are collapsed in the forecast data and will have the same projected employment changes.

Calculations of change in indemnity and medical severity due to industry mix are shown in Exhibits 8.1 and 8.2. Neither is impacted significantly by the selection of the severity relativity. Both severities show increases due to industry mix in 2020 and decreases in 2021 and 2022. Changes in 2023 are negligible. Total claim severity is shown for reference in Exhibit 8.3. This calculation implicitly assumes that industry frequency and severity relativities are stable.

## Item AC21-02-02

## Pandemic Impact on 2020 Development

At the February 16, 2021 meeting, the Committee discussed an initial study on the impact of the COVID19 pandemic on loss development emerging beginning in the second quarter of 2020 based on data through the third quarter of 2020. The study included a review of potential approaches to adjust for the distortions in the second quarter 2020 loss development for the impact of the stay-at-home orders. At the February 16, 2021 meeting, the Committee preliminarily agreed with staff's recommendation that the method which utilizes a two-year average of the Berquist-Sherman-adjusted paid loss development factors substantially adjusts for the distortions while not adding significant complexity to the loss development projection.

Exhibits 1.1 through 3.2 show comparisons of quarterly loss development changes that were discussed at the February 16, 2021 meeting and have been updated to include fourth quarter experience. Similar to the third quarter of 2020, paid and incurred development in the fourth quarter of 2020 was comparable to recent prior calendar years.

Exhibits 4.1 through 6 show information based on WCIRB medical transaction data that was discussed at the February 16, 2021 meeting (medical transaction data for the fourth quarter of 2020 will not be available until April). Exhibit 4.2 includes a comparison of average paid medical per transaction and average paid medical per claim. Average paid medical per transaction declined in the second quarter of 2020 but not as sharply as the decline in the number of transactions, which also declined sharply in the third quarter of 2020 (as shown in Exhibit 4.1).

Exhibit 7 shows projected ultimate claim settlement rates by quarter (COVID-19 claims have been removed from accident year 2020). Claim settlement rates continued to emerge lower in the fourth quarter of 2020. Exhibit 8 shows the results of staff's sensitivity tests of the Berquist-Sherman adjustment to age-to-age paid development for changes in claim settlement rates, which were discussed at the February 16, 2021 meeting.

Exhibits 9.1 to 9.3 show the alternative methods to adjust for the distortions in second quarter 2020 loss development, which were discussed at the February 16, 2021 meeting. These approaches are prior to reflecting the impact of the Berquist-Sherman adjustments. Exhibits 10.1 to 10.3 show analogous information but for which the age-to-age paid development factors are adjusted for the Berquist-Sherman approach. To derive the impact of the claim settlement rate adjustments on a quarterly basis, the annualized impact was distributed proportionately to each quarter. As shown in Exhibit 10.3, after adjusting for changes in claim settlement rates, the difference in the cumulative paid loss development factors are more modest (as compared to the analogous information shown in Exhibit 9.3). In addition, the approach that uses the average of the two most recent years has a generally similar impact compared to the approaches that substitute the second and third quarter 2020 development with development in 2019. As discussed at the February 16, 2021 meeting, staff recommends this approach given its relative simplicity compared to the substitution methods. The impact of this approach on projected loss development as of December 31, 2020 experience will be discussed at the meeting.

Quarterly Loss Change for the 2nd through 6th Least Mature Accident Years

Quarterly Loss Change for the 2nd through 6th Least Mature Accident Years

Quarterly Loss Change for the 7th through 11th Least Mature Accident Years

Quarterly Loss Change for the 7th through 11th Least Mature Accident Years

Quarterly Loss Change for the 12th through 21th Least Mature Accident Years

Quarterly Loss Change for the 12th through 21th Least Mature Accident Years

Notes
All figures in each accident year contain information from the same combination of insurers, all of whom submitted complete data for all evaluations for that accident year. Therefore, each accident year may contain a different mix of insurers (ranging from $83 \%$ to $98 \%$ of the total California workers' compensation insured market measured using 2019 earned premium levels).

## Item AC21-03-01

## First Quarter 2021 Review of Diagnostics

Twice a year, staff compiles a comprehensive list of measures to be reviewed by the Claims Working Group and Actuarial Committee in order to identify and quantify changes in claim patterns and trends and help determine the most appropriate methodologies to be used in the development of pure premium rates. The diagnostics are segregated into the following areas:

1. Market and claim characteristic information (exhibit numbers start with $M$ )
2. Claim count information (exhibit numbers start with C )
3. Loss development information (exhibit numbers start with D)
4. Claim severity information (exhibit numbers start with S)
5. Loss adjustment expense information (exhibit numbers start with E)

Please note the following:

1. At least prior to the pandemic, permanent disability claims continued to close at a faster rate throughout the state. The percent of statewide permanent disability claims closed increased from $38 \%$ for policy year 2012 to $50 \%$ for policy year 2017 at second report level ( 30 months from policy inception). Los Angeles and San Diego's permanent disability closed claim percentages are higher than the rest of the state, while the Bay Area generally has the lowest closure rates. Claim closer rates for temporary claims have also gradually increased over the last few years. Temporary closed claim percentages for Los Angeles are the lowest among all regions at all report levels. (Exhibit M5)
2. Since Senate Bill No. 1160 (SB 1160) became effective January 1, 2017, the number of filed liens has continued to decrease and the decrease accelerated during the pandemic. The number of liens filed in 2020 is $18 \%$ less than 2019 and almost $80 \%$ below 2016. Lien filings continue to be primarily related to medical treatment and have declined in all regions. (Exhibit M9.2)
3. After reaching a historical high in 2018, the number of independent medical review (IMR) applications eligible for review declined by $7.4 \%$ in 2019 and 18.7\% in 2020. (Exhibit M14)
4. After declining at a moderate rate for several years, the cumulative injury share of total indemnity counts for 2019 at the preliminary first report level is higher than 2018. (Exhibit C15)
5. On a preliminary basis, at first report level, San Diego's ratio of permanent disability claims to indemnity claims increased from AY 2018 to AY 2019. The percentage of claims involving cumulative injury increased in all regions. (Exhibit C17)
6. Retrospective evaluations of the performance of alternative loss development methodologies indicate that the latest year reform and claim settlement rate adjusted methodology for projecting ultimate loss ratios is consistently closer to actual loss ratio than the other methodologies reviewed. (Exhibits D6.1 to D6.5)
7. The number of claims in excess of $\$ 1,000,000$ has continued to grow with a sharp increase in 2017, as these claims contributed significantly more to overall incurred indemnity losses and incurred medical losses. (Exhibit S16.3)
8. The percentage of permanent disability claims that are represented across regions and loss types at first and second survey levels have recently increased after dropping during the prior year. (Exhibit E7)

Actuarial Committee Meeting Agenda for March 16, 2021
9. The average cost of medical cost containment programs (MCCP) per indemnity claim has continued to decrease since accident year 2018. The average cost of MCCP of accident year 2020 (excluding COVID-19 claims) is consistent with that for accident year 2017. (Exhibit E15)

| Exhibit \# | Exhibit Name |
| :---: | :---: |
| Market/Claim Characteristics |  |
| M4 | Distribution of Estimated Ultimate Number of Claims by Injury Type |
| M5 | Percentage of Claims Closed by Injury Type and Region - First through Third Report Level |
| M8 | Quarterly Expedited Hearings by Region |
| M9 | Number of Division of Workers' Compensation (DWC) Lien Decisions |
| M14 | IMR Filed Counts |
| Claim Count |  |
| C1 | Reported Indemnity Claim Count Development - Statewide |
| C3 | Ratio of Incremental Closed Indemnity Claims to Prior Open Indemnity Claims |
| C7 | Accident Year Indemnity Claim Frequency Model \& Indemnity Claim Frequency History and Projections |
| C10 | Annual Changes in Indemnity Frequency Attributable to Changes in Hazardousness |
| C11 | Changes in Incremental Indemnity Claim Counts and Medical Only Claim Counts |
| C12 | Economic Variables |
| C15 | Accident Year Cumulative Injury Indemnity Claim Counts by Policy Year and Report Level |
| C17 | Claim Count Ratios by Region Based on Unit Statistical Data at 1st Report Level |
| C21 | Indemnity Claim Frequency by Geographic Region |
| Loss Development |  |
| D4 | Ratios of Incremental Paid Losses to Prior Outstanding Losses by Accident Year |
| D6 | Comparison of Projected Loss Ratios |
| Claim Severity |  |
| S2 | Average Incurred Indemnity Loss per Reported Indemnity Claim \& Incurred Medical Loss per Reported Claim |
| S3 | Average Indemnity \& Medical Case Outstanding Per Open Indemnity Claim |
| S4 | Average Paid Losses per Indemnity Claim \& Average Paid Medical Loss Per Claim |
| S5 | Average Paid Losses per Closed Indemnity Claim |
| S6 | Ratio of Incremental Paid Indemnity \& Medical to Indemnity Claims Open During Period |
| S7 | Ratio of Quarterly Paid Medical to Indemnity Claims Inventory |
| S8 | Estimated Ultimate Severities by Injury Type |
| S11 | Average Permanent Disability Ratings by Type of Loss |
| S15 | Annual Changes in Indemnity Severity Attributable to Changes in Hazardousness |
| S16 | Claim Counts and Losses on Claims in Excess of \$250,000 \& \$500,000 \& \$1,000,000 |
| Loss Adjustment Expense |  |
| E5 | Average Paid ALAE Per Reported Indemnity Claim - Private Insurers |
| E7 | Percentage of Represented Permanent Disability Claims by Region and Loss Type |
| E13 | Changes in the Number and Cost of Medical-Legal Reports by Service Year |
| E15 | Average Paid MCCP per Reported Indemnity Claim - Statewide |

*Prior to 8/9/2008, DWC's workload adjudication data was available from the legacy system. DWC transitioned to a new computer-based system, the Electronic Adjudication Management System (EAMS), at the end of August 2008. Therefore, data for 2008 are comprised of data both from the legacy and from the EAMS system and may not be directly comparable to previous years due to transition issues.

| 2019 | 4.7\% | 8.3\% | 12.3\% | 13.3\% | 9.9\% | 9.3\% |  |  |  |  |  |  |  |  |  |
| 2020 | 4.4\% | 10.0\% |  |  |  |  |  |  |  |  |  |  |  |  |  |

Note: All figures in each accident year contain information from the same combination of insurers, all of whom submitted complete data for all evaluations for that accident year. Therefore, each accident year may contain a different mix of insurers (ranging from $85 \%$ to $100 \%$ of the total California workers' compensation insured market measured using 2019 earned premium levels).

## Notes:

Indemnity Benefit Level variable is leading. The benefit level change for AY 2004 is related to the AY 2003 change in non-cumulative frequency.
The Indemnity Benefit Level change for Ogilvie \& Almaraz / Guzman in 2009-2010 is not leading.
The Indemnity Benefit Level variable excludes indemnity benefit utilization, and changes in the death and permanent total benefits.
The Indemnity Benefit Level variable has been revised due to on-leveling reassessments. See Actuarial Committee item AC09-03-03.
For 1993 on, cumulative claims include both cumulative trauma and occupational disease claims. See March 19, 2014 Actuarial Committee Agenda Item III.
Economic variables are historical through 2019; December 2020 UCLA Anderson Forecasts for 2020 on.
Regression is over AY 1979 through AY 2019. AY 2020 through AY 2023 are projections.
The constant term, -0.020 , consists of measured offsets that recognize annual changes in real benefit levels relative to nominal
benefit levels and long-term economic growth. Without these offsets, the indemnity benefit level and economic variables would project frequency to increase without bound.
*AY 2019 is preliminary and change is based on a comparison of 2019 accidents on 2018 policies to 2018 accidents on 2017 policies.

**Entries for accident years 2010 and 2011 only reflect the paid cost of medical cost containment programs attributable to policies with effective dates prior to July 1, 2010. Entries for accident years 2012 and subsequent exclude the paid cost of medical cost containment programs.
***Paid medical losses used in the severity calculations above represent paid medical losses on closed indemnity claims only.

* Accident year 2019 experience is partial in that it only reflects experience from policy year 2018
* Entries for accident years 2010 and 2011 only reflect the paid cost of medical cost containment programs attributable to policies with effective dates prior to July 1, 2010. Entries for accident year 2012 and forward exclude the paid cost of medical cost containment programs.

## Percentage of Represented Permanent Disability Claims by Region and Loss Type

First and Second Survey Level, Open Claims Only

First Survey Level

|  | Northern <br> California | Southern <br> California | CT Claims | Non-CT Claims |
| :---: | :---: | :---: | :---: | :---: | :---: |
| \% of Represented |  |  |  |  |
| AY 2011 | $66.2 \%$ | $80.9 \%$ | $88.1 \%$ | $73.1 \%$ |
| AY 2012 | $67.4 \%$ | $82.4 \%$ | $89.7 \%$ | $74.4 \%$ |
| AY 2013 | $68.8 \%$ | $84.2 \%$ | $91.7 \%$ | $76.0 \%$ |
| AY 2014 | $67.9 \%$ | $83.1 \%$ | $90.5 \%$ | $75.0 \%$ |
| AY 2015 | $66.6 \%$ | $81.4 \%$ | $88.7 \%$ | $73.5 \%$ |
| AY 2016 | $66.8 \%$ | $81.7 \%$ | $89.0 \%$ | $73.8 \%$ |
| AY 2017 | $61.5 \%$ | $75.2 \%$ | $81.9 \%$ | $67.9 \%$ |
| AY 2018 | $67.9 \%$ | $83.0 \%$ | $90.4 \%$ | $75.0 \%$ |

## Second Survey Level

|  | Northern California | Southern California | $\underline{\text { CT Claims }}$ | Non-CT Claims |
| :---: | :---: | :---: | :---: | :---: |
| \% of Represented |  |  |  |  |
| AY 2011 | 69.3\% | 84.7\% | 92.3\% | 76.5\% |
| AY 2012 | 71.5\% | 87.4\% | 95.3\% | 79.0\% |
| AY 2013 | 71.8\% | 87.8\% | 95.7\% | 79.3\% |
| AY 2014 | 69.5\% | 84.9\% | 92.5\% | 76.7\% |
| AY 2015 | 70.4\% | 86.1\% | 93.8\% | 77.8\% |
| AY 2016 | 69.5\% | 85.0\% | 92.5\% | 76.7\% |
| AY 2017 | 73.6\% | 90.0\% | 98.0\% | 81.3\% |

Note: Claims are assigned to Northern and Southern California regions based on the WCAB office code reported on the Permanent Disability Claim Survey forms. If the WCAB office code was not reported, the zip code of the claimant's residence was used.

## Item AC21-03-02

## 12/31/2020 Experience Review

Staff has prepared a preliminary analysis of statewide experience through December 31, 2020, which is included in Exhibits 1 through 6. This information reflects insurers writing approximately $98 \%$ of the market based on 2020 premium levels. The loss development and on-leveling methodologies used are generally consistent with those reflected in the January 1, 2021 Pure Premium Rate Filing. Wage and loss levels were projected to September 1, 2022-the approximate midpoint of experience on policies incepting between September 1, 2021 and August 31, 2022, and premiums are adjusted to the industry average filed pure premium rate level as of July 1, 2020 as reflected in the January 1, 2021 Pure Premium Rate Filing.

As discussed at recent Committee meetings, the COVID-19 pandemic and resulting stay-at-home orders have had a significant impact on the workers' compensation system. In particular, many COVID-19 claims have been filed for accident year 2020. The accident year 2020 information shown in Exhibits 1 through 6 have been adjusted to remove COVID-19 claims based on the WCIRB's Special Call for COVID-19 Claim Data Evaluated as of December 31, 2020. Staff will discuss the projection for COVID-19 claim costs on policies incepting between September 1, 2021 and August 31, 2022 separately at the meeting (see Item AC21-03-04). In addition, staff will discuss the potential impact of the pandemic on several other aspects of the pure premium rate projection, including loss development (see Item AC21-02-02), wage and frequency projections (see Item AC20-08-04), and premium measures (see Item AC21-03-05) at the meeting. Given these open issues, the projected loss ratio for policies incepting between September 1, 2021 and August 31, 2022 has not been included in Exhibits 1 through 6.

Additional supplemental information is included in Exhibits 7 through 10. COVID-19 claims have also been excluded from accident year 2020 experience in these exhibits.

Paid medical loss development factors include the paid cost of medical cost containment programs for accident years 2011 and prior. These factors are adjusted for the losses paid prior to July 1,2017 by $-3.6 \%,-3.8 \%,-3.4 \%,-2.4 \%,-0.9 \%$, and $-0.1 \%$ to accident years 2011 to 2016 , respectively, for the
SB 1160 lien reforms. Factors are also adjusted for the impact of pharmaceutical cost reductions to bring the historical payments to the current pharmaceutical cost level.
Selections are latest year for the 12-to-24 month through 96 -to-108 month factors and three-year average for the subsequent age-to-age factors.

F. Average Paid Indemnity per Closed Claim

| Accident Year | Evaluated as of (in months) |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 12 | $\underline{24}$ | $\underline{36}$ | 48 | $\underline{60}$ | 72 | $\underline{84}$ |
| 2011 |  |  |  |  |  |  | 18,504 |
| 2012 |  |  |  |  |  | 17,085 | 18,383 |
| 2013 |  |  |  |  | 15,479 | 17,147 | 18,282 |
| 2014 |  |  |  | 13,798 | 16,359 | 17,957 | 19,034 |
| 2015 |  |  | 10,897 | 14,497 | 16,898 | 18,293 |  |
| 2016 |  | 6,533 | 11,013 | 14,452 | 16,423 |  |  |
| 2017 | 2,596 | 6,659 | 11,161 | 14,372 |  |  |  |
| 2018 | 2,878 | 7,038 | 11,418 |  |  |  |  |
| 2019 | 3,165 | 7,073 |  |  |  |  |  |
| 2020 | 3,839 |  |  |  |  |  |  |

(a) Ratio of closed indemnity claim counts (Item C) to the estimated ultimate indemnity claim counts (Item B) for that accident year.
(b) The claim counts for the latest evaluation of each accident year are equal to the reported number of closed indemnity claims. All prior evaluations shown are the product of the latest ultimate indemnity claim settlement ratio (Item D ) and the ultimate indemnity claim counts (Item B) for that accident year.

| 2019 | 350,247 |  |  |  |  |  |  |  |
| 2020 |  |  |  |  |  |  |  |  |

(c)

Adjusted based on ultimate indemnity claim settlement ratios (Item D) and assuming a log-linear relationship between maturities.
(d) Each amount is the product of the adjusted closed indemnity claim counts (Item E) and the adjusted average paid indemnity per closed claim (Item G), and divided by $\$ 1,000$.

| 2017 | 1,850 | 22,728 | 46,251 |  |  |  |  |
| 2018 | 5,173 | 26,995 |  |  |  |  |  |
| 2019 | 6,120 |  |  |  |  |  |  |

L. Adjusted Paid Indemnity on Open Claims (in \$000) (g)

| Accident <br> Year | Evaluated as of (in months) |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 12 | $\underline{24}$ | 36 | 48 | $\underline{60}$ | 72 | $\underline{84}$ |
| 2011 |  |  |  |  |  |  | 313,820 |
| 2012 |  |  |  |  |  | 385,106 | 340,223 |
| 2013 |  |  |  |  | 477,496 | 405,378 | 358,186 |
| 2014 |  |  |  | 621,228 | 523,485 | 454,753 | 384,625 |
| 2015 |  |  | 795,687 | 667,284 | 559,420 | 460,831 |  |
| 2016 |  | 738,523 | 832,736 | 692,791 | 567,334 |  |  |
| 2017 | 313,509 | 777,485 | 879,388 | 707,536 |  |  |  |
| 2018 | 338,215 | 819,015 | 877,785 |  |  |  |  |
| 2019 | 354,039 | 865,598 |  |  |  |  |  |
| 2020 | 350,247 |  |  |  |  |  |  |

(e) Each amount is equal to the product of [the average monthly indemnity payment per open indemnity claim] and [the number of months for the current evaluation]. For evaluations indicating claim settlement rate decreases, the average monthly indemnity payment per open indemnity claim at the prior evaluation is used. For evaluations indicating claim settlement rate increases, the average monthly indemnity payment per open indemnity claim at the same evaluation is used.
(f) Each amount is equal to [the difference between unadjusted and adjusted closed indemnity claim counts (Items C and E)] multiplied by the corresponding [average paid indemnity per open claim for indemnity claims in transition (Item J)].
(g) Each amount is the sum of [paid indemnity on open claims (Item I)] and the corresponding [incremental changes in paid indemnity on open claims resulting from the impact of changes in claim settlement rates (Item K)].

N. Paid Indemnity Loss Development Factors Based on Adjusted Total Paid Indemnity

| Accident | Evaluated as of (in months) |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Year | $\underline{12-24}$ | $\underline{24-36}$ | $\underline{36-48}$ | $\underline{48-60}$ | $\underline{60-72}$ | $\underline{72-84}$ |
| 2011 |  |  |  |  |  |  |
| 2012 |  |  |  |  | 1.056 | 1.042 |
| 2013 |  |  |  | 1.108 | 1.061 | 1.034 |
| 2014 |  |  | 1.236 | 1.106 | 1.055 |  |
| 2015 |  | 1.583 | 1.227 | 1.102 |  |  |
| 2016 | 3.120 | 1.574 | 1.232 |  |  |  |
| 2017 | 3.047 | 1.560 |  |  |  |  |
| 2018 |  |  |  |  |  |  |
| 2019 | 3.069 |  |  |  |  |  |
|  | 3.069 | 1.560 | 1.232 | 1.102 | 1.055 | 1.034 |
| Latest Year | 1.572 | 1.232 | 1.105 | 1.057 | 1.038 |  |

O. Paid Indemnity Loss Development Factors (i)

| Accident | Evaluated as of (in months) |  |  |  |  |  |
| :---: | :--- | :--- | :--- | :--- | :--- | :--- |
| Year | $\underline{12-24}$ | $\underline{24-36}$ | $\underline{36-48}$ | $\underline{48-60}$ | $\underline{60-72}$ | $\underline{72-84}$ |
| 2012 |  |  |  |  |  | 1.051 |
| 2013 |  |  |  |  | 1.072 | 1.044 |
| 2014 |  |  |  | 1.129 | 1.071 | 1.039 |
| 2015 |  | 1.587 | 1.234 | 1.119 | 1.058 |  |
| 2016 | 3.186 | 1.569 | 1.209 |  |  |  |
| 2017 | 3.110 | 1.525 |  |  |  |  |
| 2018 | 3.059 |  |  |  |  |  |
| 2019 |  |  |  |  |  |  |

(h) Each amount is the sum of the adjusted paid indemnity on closed claims (Item H ) and the adjusted paid indemnity on open claims (Item L).
(i) Development factors are based on paid indemnity losses from the same insurer mix as that used in the adjustment for changes in claim settlement rates and applied in the calculation of the development factors in Item N .

| 2018 | 2,980 | 6,974 | 11,132 |  |  |  |  |
| 2019 | 3,417 | 6,707 |  |  |  |  |  |
| 2020 | 3,029 |  |  |  |  |  |  |

(a) Ratio of closed indemnity claim counts (Item C) to the estimated ultimate indemnity claim counts (Item B) for that accident year.
(b) The claim counts for the latest evaluation of each accident year are equal to the reported number of closed indemnity claims. All prior evaluations shown are the product of the latest ultimate indemnity claim settlement ratio (Item D) and the ultimate indemnity claim counts (Item B) for that accident year.

L. Adjusted Paid Medical on Open Indemnity Claims (in \$000) (g)

| Accident Year | Evaluated as of (in months) |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 12 | $\underline{24}$ | $\underline{36}$ | 48 | $\underline{60}$ | 72 | $\underline{84}$ |
| 2011 |  |  |  |  |  |  | 449,160 |
| 2012 |  |  |  |  |  | 494,552 | 450,478 |
| 2013 |  |  |  |  | 556,411 | 481,181 | 438,350 |
| 2014 |  |  |  | 655,767 | 555,412 | 495,639 | 439,476 |
| 2015 |  |  | 799,024 | 685,689 | 587,159 | 496,977 |  |
| 2016 |  | 797,835 | 837,419 | 725,789 | 607,157 |  |  |
| 2017 | 396,557 | 838,883 | 879,557 | 725,732 |  |  |  |
| 2018 | 418,274 | 890,958 | 883,864 |  |  |  |  |
| 2019 | 400,560 | 863,010 |  |  |  |  |  |
| 2020 | 373,162 |  |  |  |  |  |  |

(e) Each amount is equal to the product of [the average monthly medical payment per open indemnity claim] and [the number of months for the current evaluation]. For evaluations indicating claim settlement rate decreases, the average monthly medical payment per open indemnity claim at the prior evaluation is used. For evaluations indicating claim settlement rate increases, the average monthly medical payment per open indemnity claim at the same evaluation is used.
(f) Each amount is equal to [the difference between unadjusted and adjusted closed indemnity claim counts (Items C and E)] multiplied by [the corresponding average paid medical per open indemnity claim for indemnity claims in transition (Item J)].
$(\mathrm{g})$ Each amount is the sum of [paid medical on open indemnity claims (Item I)] and the corresponding [incremental changes in paid medical on open indemnity claims resulting from the impact of changes in indemnity claim settlement rates (Item K)].

(h) Each amount is the sum of [adjusted paid medical on closed indemnity claims (Item H)], [adjusted paid medical on open indemnity claims (Item L)] and [paid medical on medical-only claims (Item M)]. The effect of the paid cost of medical cost containment programs are only present for accident years 2011 and prior.

(i) Development factors are based on paid medical losses from the same insurer mix as that used in the adjustment for changes in claim settlement rates and applied in the calculation of the development factors in Item O .
(j) Each factor represents the change in age-to-age development factors from Item P to those in Item O .
(k) Each factor is the product of [1.0 + the impact of adjustment for changes in claim settlement rates (Item Q)] and [the adjusted paid medical age-to-age development factor from Exhibit 2.6.1].

| 2020 | 0.044 | 0.044 | 2.351 | 6.380 | 0.281 | 0.281 |

(a) Based on Exhibit 1. Paid MCCP costs are excluded from accident years 2011 and subsequent.
(b) Based on experience evaluated as of December 31, 2020. Reflects an adjustment for the pharmaceutical cost reductions to restate the historical medical paid-to-date ratios at a 2018 pharmaceutical cost level.
(c) See Exhibits 2.6.1 and 2.6.2.
(d) The developed medical loss ratios shown were derived based on an adjustment for pharmaceutical cost reductions. They are only for purposes of projecting future medical loss ratios and do not reflect true estimates of ultimate loss ratios for those accident years.

Indemnity Benefit Level Factors

(a) Based on WCIRB evaluations of the average impact of legislative changes on the cost of indemnity benefits. These annual changes in benefits reflect the WCIRB's retrospective estimates of the cost impact of recent legislation as reflected in emerging post-reform costs. The annual cost impacts have been segregated between claim severity and claim frequency impacts.
(b) These impacts are based on the weekly wages (See Exhibit 5.1) of injured workers and the legislatively scheduled benefits for that year. Values for 2017 and prior have been updated to reflect a recent WCIRB reassessment of the impact of wage inflation on indemnity benefit levels.
(c) $\{[$ Column (1) $/ 100+1.0] \times[$ Column (2) $/ 100+1.0] \times[$ Column (3) $/ 100+1.0]-1.0\} \times 100$.
(d) These factors represent the combined impact of the annual benefit changes on claim severity shown in Column (1), claim frequencies shown in Column (2) and wage inflation impact on benefits shown in Column (3), adjusted to the 2020 level.
(e) On-level factors for accident years 2002, 2003 and 2004 adjust the portion of permanent disability claims that are estimated to not be subject to the January 1, 2005 PDRS ( $95 \%$ for accident year 2002, $75 \%$ for accident year 2003 and $40 \%$ for accident year 2004) to the January 1, 2005 PDRS level, and adjust for the corresponding utilization impacts on all 2002, 2003 and 2004 indemnity claims.

(a) From a Special Carrier Study through 1990. Based on WCIRB's Aggregate Indemnity and Medical Costs Calls for years 1991 through 2012. Based on WCIRB medical transaction data from 2013 onwards. Accident years 2011 and subsequent do not include MCCP costs.
(b) Based on the WCIRB's evaluation of the cost impact of changes in the medical fee schedules.
(c) Based on a component of the Consumer Price Index. Projections furnished by the California Department of Finance.
(d) Adjusted CPI on workers' compensation medical costs that are not subject to fee schedules. The current year impact is the weighted average of 0\% and Column (4), with Columns (1) and (2) from prior years as weights. (i) 1993's non-fee proportion is reduced by $13.8 \%$ due to the new medical-legal fee schedule enacted in 1994. (ii) 1998 's non-fee proportion is reduced by $7.7 \%$ due to the Inpatient Hospital Fee Schedule (IHFS) effective 4/1/1999. (iii) 2002's non-fee proportion is reduced by $7.6 \%$ due to the new pharmaceutical fee schedule effective $1 / 1 / 2003$. (iv) 2003 's non-fee proportion is reduced by $17.2 \%$ due to the outpatient fee schedule effective 1/1/2004. (v) Given the anticipated impact of legislative reform, a 0\% inflation rate has been assumed for 2004 and 2005.
(e) Column (6) = Column (3) + Column (5).

IV-B-34
WCIRB California®

## Annual Medical Cost Level Change - Legislative

| Accident | $(1)$ <br> Annual Legislative <br> Cost Impact on <br> Medical Severity (a) | $(2)$ <br> Year | Annal Legislative Cost Impact <br> on Medical Due to <br> Frequency Changes (b) |
| :---: | :---: | :---: | :---: | | Annual Total <br> Legislative Cost <br> Impact on Medical (c) |
| :---: |
| 1987 |

(a) Reflects the WCIRB's most recent estimates of the cost impact of legislation. Does not include the impact of the SB 1160 lien provisions on future medical costs as well as the estimated reductions to pharmaceutical costs attributable to SB 863, which are reflected in the medical loss development projections.
(b) This reflects the annual percentage impact on medical costs due to changes in the frequency of indemnity claims as a result of benefit changes.
(c) [Column (1) + 1.0] x[Column (2) +1.0] - 1.0

(a) See Exhibit 4.2, Column (6).
(b) See Exhibit 4.3, Column (3).
(c) Column (3) $=[1.0+$ Column (1) $] \times[1.0+$ Column (2) $]-1.0$.
(d) These factors adjust the annual impact shown in Column (3) to the 9/1/2022 level.

## Annual Wage Level Changes

| Year | Annual Wage <br> Level Change (a) | Factor to a <br> 9988 |
| :---: | :---: | :---: |
| 1989 | 4.4 | 3.170 |
| 1990 | 4.3 | 3.039 |
| 1991 | 5.0 | 2.895 |
| 1992 | 2.3 | 2.830 |
| 1993 | 4.7 | 2.703 |
| 1994 | 1.2 | 2.671 |
| 1995 | 1.8 | 2.623 |
| 1996 | 2.9 | 2.549 |
| 1997 | 3.4 | 2.466 |
| 1998 | 4.7 | 2.355 |
| 1999 | 5.2 | 2.238 |
| 2000 | 6.2 | 2.108 |
| 2001 | 9.0 | 1.934 |
| 2002 | 0.6 | 1.922 |
| 2003 | 1.1 | 1.901 |
| 2004 | 3.6 | 1.835 |
| 2005 | 5.0 | 1.748 |
| 2006 | 3.2 | 1.694 |
| 2007 | 4.6 | 1.619 |
| 2008 | 4.5 | 1.549 |
| 2009 | 2.1 | 1.518 |
| 2010 | 0.5 | 1.510 |
| 2011 | 3.0 | 1.466 |
| 2012 | 3.0 | 1.423 |
| 2013 | 4.2 | 1.366 |
| 2014 | 0.7 | 1.356 |
| 2015 | 3.3 | 1.313 |
| 2016 | 4.5 | 1.257 |
| 2017 | 1.9 | 1.233 |
| 2018 | 4.3 | 1.182 |
| 2019 | 3.7 | 1.140 |
| 2020 | 4.4 | 1.092 |
|  | 5.9 | 1.031 |
| Projected: |  |  |
| 2021 |  |  |
| 2022 | 0.5 |  |
| $9 / 1 / 2022$ | 2.1 |  |

(a) Historical wage changes through 2019 are based on Bureau of Labor Statistics data. Forecasts for 2020 and forward are based on the average of wage level projections made by the UCLA Anderson School of Business as of December 2020 and those made by the California Department of Finance as of November 2020.
(b) The average wage change for 2020 was judgmentally decreased by $0.8 \%$ to reflect the estimated difference between growth in median wages and average wages during a recession.

Premium Adjustment Factors

(a) See Exhibit 5.1.
(b) Based on WCIRB calendar year experience calls. The industry average charged rates reflect most rating plan adjustments but do not reflect the application of deductible credits or retrospective rating plan adjustments.
(c) Reflects (1) advisory pure premium rate level changes to bring premium to the advisory January 1, 2020 pure premium rate level and (2) an additional adjustment factor, which is the ratio of the average advisory January 1, 2020 pure premium rate ( $\$ 1.52$ ) to the industry average filed pure premium rate as of July 1, 2020 (\$1.80).
(d) (2b) $\div(2 a)$. This column adjusts premiums at the industry average charged rate level to the industry average filed pure premium rate level as of July 1, 2020.
(e) Based on unit statistical data.
(f) Based on average promulgated experience modifications. Calendar years 1996 through 2000 include adjustments for the impacts of AB 1913 and SB 1217 (1998).
(g) Based on a comparison of premium reported on a calendar year basis to premium reported on an estimated ultimate policy year basis over the course of two accident years. The factor is applied only for calendar years 2007 to 2010, during which reported premiums were impacted by recessionary economic forces.
(h) (1) $x(2 \mathrm{c}) \times(3) \times(6) \div[(4) \times(5)]$ for calendar years 2007 to 2010. (1) $x(2 c) \times(3) \div[(4) \times(5)]$ for all other calendar years.

Y = Hazardousness-Adjusted Noncumulative Indemnity Claim Frequency

| Constant | -0.020 |
| :--- | ---: |
| Std Err of Y Est | 0.039 |
| R Squared | 0.574 |
| No. of Observations | 41 |
| Degrees of Freedom | 36 |

| X Coefficient(s) | 0.178 | 0.277 | 0.107 | -0.144 |
| :--- | :--- | :--- | :--- | :--- |
| Std Err of Coef. | 0.070 | 0.059 | 0.042 | 0.074 |

Notes:
Indemnity Benefit Level variable is leading. The benefit level change for AY 2004 is related to the AY 2003 change in non-cumulative frequency.
The Indemnity Benefit Level change for Ogilvie \& Almaraz / Guzman in 2009-2010 is not leading.
The Indemnity Benefit Level variable excludes indemnity benefit utilization, and changes in the death and permanent total benefits.
The Indemnity Benefit Level variable has been revised due to on-leveling reassessments. See Actuarial Committee item AC09-03-03.
For 1993 on, cumulative claims include both cumulative trauma and occupational disease claims. See March 19, 2014 Actuarial Committee Agenda Item III.
Economic variables are historical through 2019; December 2020 UCLA Anderson Forecasts for 2020 on.
Regression is over AY 1979 through AY 2019. AY 2020 through AY 2023 are projections.
The constant term, -0.020 , consists of measured offsets that recognize annual changes in real benefit levels relative to nominal
benefit levels and long-term economic growth. Without these offsets, the indemnity benefit level and economic variables would project
frequency to increase without bound.
*AY 2019 is preliminary and change is based on a comparison of 2019 accidents on 2018 policies to 2018 accidents on 2017 policies.

Selected Medical Severity Trend:
2.5\%
(a) Estimated ultimate severities for all accident years are derived by dividing ultimate medical losses on indemnity claims by ultimate indemnity claim counts. The estimated ultimate medical severities were derived from the projected ultimate loss ratios shown in Exhibit 3.2, column (6).
(b) These adjustment factors are based on Exhibit 4.4, excluding the impact of frequency, and including the impact of SB 1160 provisions applicable to outstanding medical losses.
(c) Severities for accident years 2011 and subsequent do not reflect the cost of medical cost containment programs (MCCP). Severities for accident years 2010 and prior do reflect MCCP costs.

Source: WCIRB experience calls.

Projection of Medical Severity Trends by Accident Year Adjusted to Remove the Cost of Medical Cost Containment Programs (MCCP) Based on Experience as of December 31, 2020

(a) Estimated ultimate severities for all accident years were derived by dividing ultimate medical losses on indemnity claims by ultimate indemnity claim counts.
(b) Adjustments to accident years 2005 through 2010 based on WCIRB's Annual Calls for Direct California Workers' Compensation

Aggregate Indemnity and Medical Costs.
(c) Ultimate severities are on-leveled based on adjustment factors shown on Exhibit 6.3.

Notes
All figures in each accident year contain information from the same combination of insurers, all of whom submitted complete data for all evaluations for that accident year. Therefore, each accident year may contain a different mix of insurers (ranging from $83 \%$ to $98 \%$ of the total California workers' compensation insured market measured using 2019 earned premium levels).

## California Workers' Compensation Estimated Indemnity Claim Frequency by Accident Year

Note:
The 2019 and 2020 estimates are based on a comparison of claim counts based on WCIRB accident year experience as of December 31, 2020 relative to the estimated change in statewide employment. The 2020 estimate is without COVID-19 claims. Prior years are based on unit statistical data.

Actuarial Committee
Meeting Agenda for March 16, 2021

## Item AC21-03-03

## Review of COVID-19 Claim Diagnostics

The COVID-19 pandemic has had significant impact on many components of experience emerging in 2020 and 2021. Exhibit 1 shows a summary of the WCIRB's Special Call for COVID-19 Claim Data Evaluated as of December 31, 2020. A number of other key system diagnostics developed based on the most current emerging COVID-19 pandemic-related experience will be presented at the meeting. Staff will also present an update to the impact of the pandemic on medical treatment patterns based on medical transaction data updated through February 2021.

## 9/1/2021 Filing - COVID-19 Claim Cost Projection

At the August 4, 2020, August 10, 2020, and September 8, 2020 meetings, the Committee discussed the WCIRB's projection of expected COVID-19 claim costs to be incurred on January 1, 2021 through August 31, 2021 policies. Based on that projection, the WCIRB's January 1, 2021 Pure Premium Rate Filing reflected an average provision for COVID-19 claims of $4 \%$, or $\$ 0.06$ per $\$ 100$ of payroll. ${ }^{1}$ For reference, attached is Section B, Appendix D of the January 1, 2021 Pure Premium Rate Filing which summarizes the WCIRB's COVID-19 claim cost projection.

Updated COVID-19 claim cost projections for policies incepting between September 1, 2021 and August 31, 2022 will be discussed at the meeting.

[^10]IV-D-1

## Section B

## Appendix D <br> COVID-19 Claim Cost Projection

The COVID-19 pandemic began to emerge in California in early 2020. During the initial period of the pandemic, without the presence of a legal presumption of compensability of COVID-19-related illnesses in the workers' compensation system, many claims were filed, particularly by first responders and healthcare workers.

On May 6, 2020, Governor Newsom issued Executive Order N-62-20 (Executive Order) thereby providing a rebuttable presumption of compensability for all workers directed by their employer to work outside their home. In May 2020, the WCIRB estimated that the statewide cost of claims projected to be filed during the effective period of the rebuttable presumption in the Executive Order was $\$ 1.2$ billion. ${ }^{1}$ While the term of the Executive Order has now expired, workers' compensation claims continue to be filed, with several bills under consideration by the Legislature to re-establish a legal presumption of compensability for COVID-19 claims of specified workers. As of mid-July, data from the Division of Workers' Compensation (DWC) indicates that almost 23,000 workers' compensation claims involving COVID-19 have been filed in California, with the numbers increasing rapidly.

Infectious disease experts and epidemiologists expect the COVID-19 pandemic to continue into 2021 and beyond. As the pandemic began to emerge in California early in 2020, the current advisory workers' compensation pure premium rates, approved by the Commissioner in November 2019 to be effective January 1, 2020, do not reflect a provision for COVID-19 claim costs emerging in 2020. With the pandemic expected to continue into 2021 and beyond, the WCIRB has estimated the cost of COVID-19 claims projected to be incurred on policies incepting between January 1, 2021 and August 31, 2021, and has reflected this cost estimate in the pure premium rates proposed in this filing.

The WCIRB estimates the cost of COVID-19 claims on January 1, 2021 to August 31, 2021 policies to be $3.8 \%$ of total losses and loss adjustment expenses (LAE). This equates to an average of $\$ 0.06$ per $\$ 100$ of payroll. The methodology underlying this projection is summarized below.

## Projection Methodology

Limited forecasts are available for COVID-19 infection rates in 2020 and projections for 2021 and 2022 are even more limited. To project COVID-19 claims arising on January 1, 2021 to August 31, 2021 policies, the WCIRB first estimated the total cost of losses and LAE for COVID-19 claims arising in 2020 based on available information about COVID-19 deaths and hospitalizations in California as well as from several publicly available disease and statistical models. ${ }^{2}$ The WCIRB then projected COVID-19 claim costs for 2021 and 2022 based on judgmental assumptions relating COVID-19 deaths and hospitalizations in 2021 and 2022 to those in 2020. These assumptions were informed by a comprehensive review of published COVID-19 related statistics and research.

Exhibits 1.1 through 1.3 summarize the WCIRB's projection of the estimated cost of COVID-19 losses and LAE incurred on January 1, 2021 to August 31, 2021 policies. Exhibit 1.1 summarizes the computation of the projected accident year 2020 COVID-19 losses and LAE used as a basis to project COVID-19 losses and LAE in 2021 and 2022.

[^11]Line (1) of Exhibit 1.1 shows the projected number of California COVID-19 deaths for the working age population ( $18-69$ years) to occur in 2020. The projection was based on published forecasts as of August 3, 2020 from the Institute for Health Metrics and Evaluation (IHME) and YouYang GU from MIT (MIT-YYG). ${ }^{3}$ At the time of this valuation, both sources projected the statewide COVID-19 deaths through November 1, 2020. The WCIRB then extended the average of the two models of projected deaths to the end of 2020 assuming the incremental monthly change in deaths in October persists in November and December 2020, given that a potential winter wave of COVID-19 infections may occur concurrently with the flu season that typically starts around October. Table 1 shows the actual and projected COVID-19 death counts by month for 2020 using this approach.

Table 1 - Projected COVID-19 Deaths by Month for 2020

|  | Actuals from CDPH |  | Average of IHME and MIT-YYG <br> Projections (as of 8/3/2020) |  | Estimated Based on <br> October Change |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | June | July | August | September | October | November | December |
|  | 6,090 | 9,356 | 12,531 | 15,158 | 17,602 | 20,046 | $\mathbf{2 2 , 4 9 0}$ |
| Incremental Monthly <br> Change | - | 3,266 | 3,175 | 2,627 | 2,444 | 2,444 | 2,444 |

The majority of COVID-19 deaths have occurred in older people, many of whom are not working. The WCIRB's year-end projection for 2020 COVID-19 deaths of approximately 22,500 was adjusted to the California working age population based on the age distribution of deaths as of August 2, 2020, published by the California Department of Public Health (CDPH). ${ }^{4}$ The projected 2020 death counts for the working age population of approximately 7,800 based on this approach and shown on line (1) of Exhibit 1.1 were validated for reasonableness against the reported-to-date death counts shown in Table 2.

Table 2 - Projected COVID-19 Deaths and Hospitalizations for Working Age Population ( 18 to 69 Years) Compared to Reported-to-Date

|  | Reported-to-Date <br> (End of July) | Projected 2020 <br> Year-End | \% Change between July <br> 2020 and Year-End |

Line (2) of Exhibit 1.1 shows the projected number of California COVID-19 hospitalizations (excluding deaths) for the working age population (18-69 years) to occur in 2020. At the time of this valuation, limited reliable forecasts of total COVID-19 hospitalizations in 2020 were available, partly because cumulative hospitalizations at the state level are not always reported. In particular, these forecasts are challenging for California given that the state has not, at the time of this valuation, yet progressed past its "first infection wave" unlike several other states. ${ }^{7}$

[^12]The WCIRB projected statewide California 2020 COVID-19 hospitalizations based on an assumed total hospitalization rate (including deaths) after the "first infection wave" by using data from five other states that essentially completed a first infection wave. For many of these states, the rate of COVID-19 infections was higher, compared to California, as they were considered to be "hotspots" in the U.S. during the early months of the pandemic. The Massachusetts total post-first infection wave hospitalization rate of 172 per 100,000 population as of July 28 (the lowest total hospitalization rate among these five states) ${ }^{8}$ was selected by the WCIRB to project year-end hospitalizations in California. The year-end projection for COVID-19 hospitalizations (including deaths) was then adjusted to the California working age population based on the age distribution of COVID-19 hospitalizations published by the CDC (COVID-NET) as of July 25, 2020. ${ }^{9}$ The WCIRB projected total 2020 COVID-19 hospitalizations (including deaths) in California of approximately 49,000 was also validated for reasonableness against the reported-to-date hospitalizations as shown in Table 2.

The projected total hospitalizations were further categorized as severe cases (those that do not require an ICU stay) and critical cases (ICU cases). Critical cases were assumed to be $30 \%$ of all hospitalizations, consistent with the assumption reflected in the WCIRB's May evaluation of the Executive Order. ${ }^{10}$ The projected deaths were excluded from both severe and critical cases by assuming an approximate mortality rate of $45 \%$ among critical cases and subtracting the remaining deaths from severe cases. ${ }^{11}$ The projected 2020 number of working age hospitalizations excluding deaths computed in this manner is 41,200 , as shown on line (2) of Exhibit 1.1. ${ }^{12}$

Lines (1) and (2) of Exhibit 1.1 estimate the total 2020 COVID-19 deaths and hospitalizations of working age Californians. To estimate the number of worker's compensation claims that will potentially be filed for accident year 2020, the WCIRB compared the number of claims filed with the DWC through First Report of Injury as of July 23, 2020 with reported working age COVID-19 infections from the CDPH (which include deaths, hospitalizations and mild cases) during the same time period. The WCIRB also assumed approximately $50 \%$ of the working age mild cases of COVID-19 will not file a claim ${ }^{13}$ and about $10 \%$ of all COVID-19 claims filed with the DWC will be denied with the denial ultimately upheld. The reasonability of both of these assumptions was validated based on information about COVID-19 claims filed thus far and based on feedback from claims experts. Based on these assumptions, a conversion factor of $12 \%$, as computed in Exhibit 2 and shown on line (3) of Exhibit 1.1, was used to adjust total 2020 working age COVID-19 deaths and hospitalizations to projected workers' compensation claims.

Line (4) of Exhibit 1.1 shows the projected number of 2020 COVID-19 death claims in the California workers' compensation system. It is computed as the product of the projected number of COVID-19 working age deaths on line (1) and the workers' compensation claim conversion factor of $12 \%$ shown on line (3). Line (5) of Exhibit 1.1 shows the projected loss and LAE cost of 2020 COVID-19 death claims, which is the product of line (4) and the average cost of losses and LAE on death claims as projected in the WCIRB's May 2020 evaluation of the Executive Order. ${ }^{14}$ Lines (6) and (7) of Exhibit 1.1 show a similar computation for 2020 COVID-19 hospitalization workers' compensation claims excluding deaths. ${ }^{15}$ In the May 2020 evaluation of the Executive Order, the WCIRB estimated the average cost of mild, severe, critical and death COVID-19 claims in California based on a review of WCIRB data and published data as

[^13]well as feedback from a number of workers' compensation claims and medical experts. The WCIRB continues to be believe those estimates are reasonable.

Line (8) of Exhibit 1.1 shows the estimated statewide accident year 2020 cost of losses and LAE on COVID-19 claims. The total cost on line (8) is computed as the sum of the projected cost of death claims shown on line (5), the cost of hospitalization claims (excluding death claims) shown on line (7) and the estimated cost of "mild" (non-hospital) claims, with the cost of mild claims computed based on the methodology used in the WCIRB's May 2020 evaluation of the Executive Order. ${ }^{16}$ Line (9) of Exhibit 1.1 shows that $63 \%$ of statewide COVID-19 claim costs are estimated to be generated from the insured market. This estimate is based on the percentage of all COVID-19 claims reported to the DWC as of July 23, 2020 that arose in the insured market. Finally, line (10) of Exhibit 1.1 shows the $\$ 0.7$ billion estimated cost of losses and LAE on accident year 2020 COVID-19 claims in the insured market.

Exhibit 1.2 summarizes the computation of the projected accident year 2021 COVID-19 losses and LAE. There is very limited information available on COVID-19 infections to occur in 2021. A number of published expert forecasts indicate that COVID-19 infections in 2021 will not be significantly better or worse than in 2020, and the number of hospitalizations in 2021 is likely to be similar to that in $2020 .{ }^{17}$ All available forecasts indicated that more infection waves will occur in 2020 and 2021 and likely continue until the middle of 2022 when herd immunity may be reached. Based on this information, the WCIRB estimates the level of COVID-19 claims in 2021 (prior to reflecting the impact of improved treatments or a potential vaccine) to be generally comparable to that in 2020 (i.e., a relativity of 2021 to 2020 of 1.0 ) as shown on line (11) of Exhibit 1.2.

There is potential for the pandemic to improve significantly in 2021 due to ongoing improvements in medical treatments for COVID-19 patients or the impact of potential vaccines or treatments likely to be proven effective in 2021. Exhibit 3 summarizes the current significant advances in treatment of COVID-19 illnesses. As shown on line (12) of Exhibit 1.2, the WCIRB judgmentally estimates a $25 \%$ reduction in COVID-19 cost levels in 2021 due to improved treatments and the potential impact of a vaccine.

Line (13) of Exhibit 1.2 shows the projected accident year 2021 COVID-19 losses and LAE for the insured market. The projection of $\$ 0.52$ billion is based on the 2020 estimate of COVID-19 losses and LAE with a judgmental estimated reduction of $25 \%$ to reflect the potential impact of improved treatments and a vaccine. This equates to $4.7 \%$ of the total non-COVID-19 accident year 2021 loss and LAE projection of $\$ 10.9$ billion, determined using the methodologies summarized in Section B, as shown on lines (14) and (15) of Exhibit 1.2.

Exhibit 1.3 summarizes the computation of the COVID-19 losses and LAE projected for accident year 2022 and the January 1, 2021 to August 31, 2021 policy period. As shown on line (16), the WCIRB judgmentally estimates a 67\% reduction in accident year 2022 COVID-19 cost levels relative to 2020 due to continued improvements in treatments and the potential for a reduced number and severity of waves caused by continued impact of COVID-19 vaccines and potential herd immunity to COVID-19. Similar to the computation of the projected accident year 2021 COVID-19 losses and LAE, line (17) of Exhibit 1.3 shows the projected accident year 2022 COVID-19 losses and LAE for the insured market of $\$ 0.23$ billion. This equates to $1.9 \%$ of the total non-COVID-19 accident year 2022 loss and LAE projection of $\$ 12.0$ billion, determined using the methodologies summarized in Section B, as shown on lines (18) and (19) of Exhibit 1.3.

Line (20) of Exhibit 1.3 computes the adjustment factor for the estimated cost impact of COVID-19 claims to be incurred on policies incepting between January 1, 2021 and August 31, 2021. As shown, the

[^14]average of the 2021 and 2022 projections, weighted based on the relative exposure of each year for the January 1, 2021 through August 31, 2021 policy period, is $3.8 \%$ of total non-COVID-19 projected losses and LAE. This equates to an average of $\$ 0.06$ per $\$ 100$ of payroll based on a projected average pure premium rate prior to the impact of COVID-19 claims of $\$ 1.50$ per $\$ 100$ of payroll. The process to reflect the average provision of $\$ 0.06$ per $\$ 100$ of payroll based on the relative frequency of COVID-19 claims by industry sector is detailed in Section A, Appendix A.

Limited information on projected COVID-19 infection rates in 2021 and 2022 is available. The WCIRB projected COVID-19 claim costs for 2021 and 2022 based on a series of reasonable assumptions informed by a comprehensive review of a wide range of available COVID-19 related statistics and research. Given the inherent uncertainty in the COVID-19 projection as well as the extreme fluidity of the pandemic, the WCIRB plans to reassess its evaluation of COVID-19 claim costs to be incurred on January 1, 2021 through August 31, 2021 policies in September based on updated information and statistical models as well as any legislation impacting compensability of COVID-19 enacted by the California Legislature by the close of the legislative session. If appropriate based on that re-evaluation, the WCIRB will amend the January 1, 2021 advisory pure premium rates proposed in this filing by the time of the California Department of Insurance public hearing on the filing.

## Projections Based on Alternative Assumptions

Given the uncertainty involved as to the future of the pandemic as well as the breadth of the assumptions reflected in the WCIRB's projection summarized above, the WCIRB has also projected a low-range and a high-range COVID-19 cost estimate for the January 1, 2021 to August 31, 2021 policy period.

The WCIRB's low-range projection reflects the same assumptions used in the projection summarized in Exhibits 1.1 to 1.3 with several exceptions. First, the number of death claims projected was based solely on the IHME model estimate, which was the lower of the two model projections. Second, the number of COVID-19 working age hospitalizations for the remainder of 2020 was limited to be only $133 \%$ of the number of working age hospitalizations that have occurred thus far in 2020 (in lieu of almost 160\% as shown in Table 2). Finally, reflecting more optimistic assumptions regarding future waves, improved treatments and the impact of vaccines, the WCIRB assumed that 2021 COVID-19 costs would be $50 \%$ of the 2020 costs (in lieu of $75 \%$ ) and that 2022 COVID-19 costs would be $25 \%$ of the 2020 costs (in lieu of $33 \%)$. The WCIRB's low-range estimate computed on this basis is $2.4 \%$ of total non-COVID-19 projected losses and LAE for the January 1, 2021 to August 31, 2021 policy period. This equates to an average of $\$ 0.04$ per $\$ 100$ of payroll.

The WCIRB's high-range projection reflects the same assumptions used in the projection summarized in Exhibits 1.1 to 1.3 with several alternative assumptions. First, the number of death claims projected was based solely on the MIT-YYG model estimate, which was the higher of the two model projections. Second, the number of projected COVID-19 hospitalizations for 2020 was based on the average of the Massachusetts and Maryland hospitalization rates after their first infection wave, which is about $10 \%$ higher than the estimate based solely on the Massachusetts information. Finally, reflecting less optimistic assumptions regarding future waves, improved treatments and the impact of vaccines, the WCIRB assumed in the high-range projection that 2021 COVID-19 costs would be $90 \%$ of the 2020 costs (in lieu of $75 \%$ ) and that 2022 COVID-19 costs would be $50 \%$ of the 2020 costs (in lieu of $33 \%$ ). The WCIRB's high-range estimate computed on this basis is $5.2 \%$ of total non-COVID-19 projected losses and LAE for the January 1, 2021 to August 31, 2021 policy period. This equates to an average of $\$ 0.08$ per $\$ 100$ of payroll.

## Projected Accident Year 2020 COVID-19 Claim Costs

(1) AY 2020 Statewide Deaths Working Age Population: (Tables 1 and 2) ..... 7,800
(2) AY 2020 Statewide Hospitalizations (Excl. Deaths) Working Age Population: (Table 2) ..... 41,200
(3) Workers' Compensation Claim Conversion Factor: (Exhibit 2) ..... 12\%
(4) AY 2020 Estimated WC Death Claims: (1) $\times$ (3) ..... 940
(5) AY 2020 Estimated WC Death Claim Costs: (4) x Avg. Death Severity* ..... \$0.4B
(6) AY 2020 Estimated WC Hospitalization (Excl. Death) Claims: (2) x (3) ..... 4,950
(7) AY 2020 Estimated WC Hospitalization Claim Costs: (6) x Avg. Hospitalization Severity* ..... \$0.7B
(8) Statewide AY 2020 COVID-19 Loss \& LAE: (5) + (7) + (Mild claim costs**) ..... \$1.1B
(9) Insured Market Share of COVID-19 Claims: (DWC summary of COVID-19 claims) ..... 63\%
(10) Projected AY 2020 Insured Market COVID-19 Loss \& LAE: (8) x (9) ..... \$0.7B

* Based on severity estimates by COVID-19 claim type in the WCIRB's May 2020 evaluation of the Governor's Executive Order.
** Based on proportion of "mild" COVID-19 claims costs in the WCIRB's May 2020 evaluation of the Governor's Executive Order.

## Projected Accident Year 2021 COVID-19 Claim Costs

11) Estimated Relativity AY 2021 to AY 2020 COVID-19 Claims: 1.0
12) Judgmental Adjustment for Improved Treatment \& Potential Vaccine: 25\%
13) AY 2021 Insured Market COVID-19 Loss \& LAE: \{Exhibit $1.1(10)\} \times(11) \times\{1.0-(12)\} \quad \$ 0.52 \mathrm{~B}$
14) AY 2021 Insured Market Projected Non-COVID-19 Loss \& LAE:* \$10.9B
15) AY 2021 COVID-19 Adjustment Factor: (13)/(14) $\quad 4.7 \%$

## Projected 1/1/2021 to 8/31/2021 Policy Period COVID-19 Claim Costs

16) Estimated Relativity AY 2022 to AY 2020 COVID-19 Claims: ..... 0.33(Includes Judgmental Adjustment for Improved Treatment \& Potential Vaccine)
17) AY 2022 Insured Market COVID-19 Loss \& LAE: \{Exhibit 1.1 (10) \} x (16) ..... \$0.23B
18) AY 2022 Insured Market Projected Non-COVID-19 Loss \& LAE:* ..... \$12.0B
19) AY 2022 COVID-19 Adjustment Factor: (17) / (18) ..... 1.9\%
20) 1/1/2021 to 8/31/2021 Policy Period COVID-19 Adjustment Factor ..... 3.8\%$\{[$ Exhibit $1.2(15)] \times 67 \%\}+\{(19) \times 33 \%\}$

## Computation of COVID-19 Workers' Compensation Claim Conversion Factor

1) Total COVID-19 Infections Age 18-69 as of July 2020:1 312,000
2) Total COVID-19 Hospitalizations (Including Deaths) Age 18-69 as of July 2020:² 19,000
3) Total COVID-19 Mild Cases Age 18-69: (1)-(2) 293,000
4) COVID-19 Infections Excluding 50\% of Mild Cases Age 18-69: (2) + (3) $\times 50 \%$ 165,500
5) Total COVID-19 Workers' Compensation Claims Filed as of July 2020:3 22,300
6) Estimated Proportion of Claims Denied and Upheld: $\quad 10 \%$
7) Workers' Compensation Claim Conversion Factor: (5) / (4) $\times\{1.0$ - (6) \}
${ }^{1}$ COVID Tracking Project as of July 18, 2020 (adjusted to working age population).
${ }^{2}$ CDC (COVID-NET) as of July 25, 2020. COVID-19 hospitalizations often lag a week behind COVID-19 infections.
${ }^{3}$ Based on Division of Workers' Compensation First Report of Injury claims as of July 23, 2020.

## COVID-19 Claim Cost Projection

Published Information on Improved Treatments and Potential Vaccines

- Available Treatments for COVID-19
- Dexamethasone (an anti-inflammatory steroid recommended for severe COVID-19 infections)
- Prelim report showed mortality reduced by $12 \%$ among ICU patients
- Remdesivir (FDA approved for emergency use for hospitalized patients)
- Shown to reduce time to recovery by 4 days (11 vs. 15 days)
- Convalescent plasma (FDA approved for emergency use)
- Prone positioning reduces need for ventilators by $46 \%$
- Treatments under clinical trial investigation (about 1,900 ongoing trials as of August 2020)
- Inhaled beta interferon: a U.K. trial showed an 80\% mortality reduction among 100 hospitalized patients
- Plasma-based therapies
- Potential vaccines
- An effective vaccine by early 2021 highly likely
- > 140 potential COVID-19 vaccines in various stages of development (WHO)
- A study on 2009 influenza pandemic (H1N1) shows the vaccines prevented about $4 \%$ of both deaths and hospitalizations, and $3 \%$ of total infections.
- Improved clinical guidelines for treating COVID-19

## Item AC21-03-05

## Pandemic Impact on Premium Measures

At the December 8, 2020 meeting, the Committee discussed the potential impact of the COVID-19 pandemic and economic downturn on calendar year 2020 earned premium amounts. The Committee noted that, during the Great Recession, the economic downturn resulted in atypical amounts of return premiums at audit which distorted reported calendar year earned premium amounts when used as a base for the projected accident year loss ratio. As a result, the Committee recommended staff review the pandemic's impact on calendar year 2020 earned premium amounts which may include potential adjustments to appropriately project the accident year 2020 loss ratio.

Calendar year earned premium is used as the basis for the ultimate accident year loss ratios and reflects premiums earned from policies incepting during the same year as the accident year, premiums earned from policies incepting in the prior calendar year, and audits on older policies reflected in that calendar year. Although the audit amounts on older policies (incepting more than one year prior to the accident year) do not reflect the exposure period when the claims occur, they are typically a small percentage of the total earned premium and stable from year to year. During the Great Recession, audits on recession era policies resulted in atypical amounts of return premiums reflected in earned premium amounts for recovery era calendar years. As a result, the WCIRB reflected an adjustment to the calendar year earned premium amounts from these years to better align with the accident year exposure period. This adjustment was based on a comparison of premium reported on a calendar year basis to premium reported on an estimated ultimate policy year basis over the course of two accident years. ${ }^{1}$

Exhibit 1 shows quarterly written premium development factors by policy year. Written premium development in the second through fourth quarters of 2020 has been significantly lower than recent prior calendar years. For policy year 2020, this is likely a direct result of the economic downturn on policies incepting in 2020. For policy year 2019 development in 2020 (which in part reflect audit adjustments from 15 to 24 months), this is likely impacted by return premiums on the second quarter 2020 and later portions of 2019 policies due to sharply reduced exposure in $2020 .{ }^{2}$ For policy year 2018 development in 2020, the lower-than-typical development is somewhat unexpected given that 2018 policies do not include any exposure in 2020. However, the lower development may be a result of the stay-at-home orders delaying or preventing a physical audit or the policyholder no longer being in operation as a result of the pandemic. Exhibit 2 shows quarterly earned premium development by policy year, which shows a similar development pattern to the written premium.

The sudden and sharp nature of the 2020 economic downturn is contrary to the Great Recession, which occurred more gradually and resulted in the atypical amounts of return premiums when the affected policies were later audited. Given the uncertainty around the economic and premium projections during the pandemic and that some impact of the 2020 economic downturn appears to be already reflected in the reported premium amounts for policy years 2019 and 2020, an adjustment similar to what the WCIRB applied to premium amounts during the Great Recession may not be necessary.

Committee feedback on the 2020 premium measures will be solicited at the meeting.

[^15]

[^10]:    ${ }^{1}$ In the Insurance Commissioner's Decision on the Filing, the approved advisory pure premium rates did not reflect a provision for projected COVID-19 claim costs on 2021 policies, his Decision indicated that, " $[t]$ he WCIRB's thorough efforts to estimate COVID-19 costs are noted and appreciated but I am not persuaded that there is sufficient and reliable data upon which to base an adjustment for COVID-19 costs. Insurance companies are encouraged to take under advisement the actuarial analyses provided in the proposed decision as well as ongoing developments when evaluating whether and to what extent an adjustment for the costs of COVID-19 should be incorporated into a given insurer's rate filing." The Proposed Decision includes a Table of Recommended COVID-19 Additive Adjustment per $\$ 100$ of Payroll that average $\$ 0.05$ per $\$ 100$ of payroll.

[^11]:    ${ }^{1}$ Evaluation of Cost Impact of Governor Newsom's Executive Order on Rebuttable Presumption for California COVID-19 Workers' Compensation Claims, WCIRB, May 2020.
    ${ }^{2}$ For purposes of this valuation, the WCIRB assumed that a presumption reasonably similar to that included in Executive Order N-62-20 will be in effect for the remainder of year. If by the time of the CDI public hearing on this filing no presumption is enacted or a significantly different presumption is enacted, the WCIRB will reassess this evaluation and, if appropriate, amend the proposed January 1, 2021 advisory pure premium rates.

[^12]:    ${ }^{3}$ IHME's projection for COVID-19 deaths in California used in this valuation was made on August 3, 2020. Similarly, YouYang Gu's deaths projection used was made on August 3, 2020.

    ${ }^{9}$ CDC COVID-NET Laboratory-confirmed COVID-19-Associated Hospitalizations by Age Group (accessed on July 31, 2020).
    ${ }^{10}$ Based on the proportion of ICU cases reported in California, accessed on August 14, 2020.
    ${ }^{11}$ Armstrong R.A., Kane, A.D., and Cook, T.M. Outcomes from intensive care in patients with COVID-19: a systematic review and meta-analysis of observational studies. Anaesthesia. June 30, 2020.
    ${ }^{12}$ The estimated distribution between severe and critical cases of COVID-19 after excluding deaths was also used in the computation of line (7) of Exhibit 1.1, the projected cost of 2020 COVID-19 hospitalization claims in the California workers' compensation system.
    ${ }^{13}$ This assumption was also reflected in the WCIRB's evaluation of the Executive Order.
    ${ }^{14}$ Evaluation of Cost Impact of Governor Newsom's Executive Order on Rebuttable Presumption for California COVID-19 Workers' Compensation Claims, WCIRB, May 2020. In the evaluation, the WCIRB projected an average loss and LAE cost of COVID-19 death claims of $\$ 381,800$.
    ${ }^{15}$ In the May 2020 evaluation of the Executive Order, the WCIRB projected an average loss and LAE cost of COVID-19 severe hospitalization claims of $\$ 101,800$ and an average cost of critical hospitalization claims of $\$ 260,100$.

[^14]:    16 In the May 2020 evaluation of the Executive Order, the WCIRB projected an average loss and LAE cost of COVID-19 mild claims of $\$ 2,900$. Mild claims are projected to represent only about $6 \%$ of total COVID-19 claim costs.
